January 2018

Louis M. Taverna, Chairman MWRA Advisory Board 100 First Avenue Boston, MA 02129

Dear Chairman Taverna:

This letter transmits to the Advisory Board for its review and comment the MWRA's Capital Improvement Program (CIP) for Fiscal Year 2019 and the proposed Cap spending for FY19-23. The MWRA's Board of Directors approved the transmittal of the proposed CIP and the proposed Cap at its December 20, 2017 meeting.

The FY19 Proposed CIP projects \$207.2 million in spending for FY19, of which \$112.7 million supports Wastewater Systems Improvements, \$81.2 million supports Wastewater System Improvements and \$13.3 million is for Business and Operations Support. Major projects include the Chelsea Creek Headworks Rehabilitation, Deer Island Clarifier Rehabilitation, Pipeline Redundancy projects for both the Northern Intermediate High and Southern Extra High Service areas, and the Nut Island and Deer Island HVAC Improvements.

The projected spending for the next five-year Cap is \$1.2 million, the majority of spending supporting asset protection initiatives. The FY19 Proposed CIP includes \$891.8 million or 72.3% for asset protection and \$229.5 million or 18.6 % for water system redundancy. The Metro Tunnels long-term water redundancy project will commence during the FY19-23 period.

Funding for the community financial assistance programs is included at \$111.8 million for the Infiltration/Inflow loan and grant program and \$52.3 million for the water pipeline loan program.

A copy of the FY19 Proposed CIP is available on-line at <a href="www.mwra.com">www.mwra.com</a>. Questions or comments on this document should be directed to the MWRA Budget Department at (617)788-2268.

Thank you for your continued support, comments and recommendations on the capital budget.

Sincerely,

Frederick A. Laskey Executive Director

#### **MWRA AT A GLANCE**

#### **Purpose**

Provide wholesale water and sewer services to customer communities, funded primarily through rates and charges

#### **Legal Status**

Massachusetts public authority established by an enabling act in 1984 – Chapter 372 of the Acts of 1984 as most recently amended January 2017

#### Management

- 11-member Board of Directors (3 Governor appointees, 3 Mayor of Boston appointees, 1 City of Quincy appointee, 1 Town of Winthrop appointee, and 3 Advisory Board appointees)
- 1 Executive Director (5 divisions: Office of the Executive Director, Operations, Finance, Administration, Law)

#### **Advisory Board**

Established by the enabling act to make recommendations to the MWRA on the MWRA budget and programs and to serve as liaison to the customer communities

#### **Service Area**

- 61 customer communities (43 sewerage, 51 water)
- 3.0 million people (44% of MA population)
- 5,500 businesses

#### FY18 Operating Budget (\$ in millions)

Direct Expenses	\$232.6
Indirect Expenses	\$38.9
Capital Finance	\$472.2
Total Operating Budget	\$743.6
Revenues*	\$743.6

<sup>\*96.4%</sup> of Revenues raised from rate assessments

### Bond Ratings - General Revenue Bonds (senior/subordinate)

Moody's - Aa1/Aa2 S&P - AA+/AA Fitch - AA+/AA

#### **Capital Improvement Program**

- Total CIP spending: \$8.3 billion since 1984
- Total Current Indebtedness \$5.2 billion
- FY18 CIP Budget: \$174.9 million

#### **Water System**

- 2 protected reservoirs
  - o Quabbin
  - o Wachusett
- 2 water treatment facilities
  - o John J. Carroll
  - William A. Brutsch
- 350 miles of distribution infrastructure including aqueducts, deep rock tunnels, and pipeline
- 12 active storage reservoirs and standpipes
- 11 active pumping stations
- Average Daily flow: 200 mgd
- Safe yield: 300 mgd
- Treatment Capacity: 405 mgd
- Percentage of capacity utilized: 67%\*
   \*based on safe yield

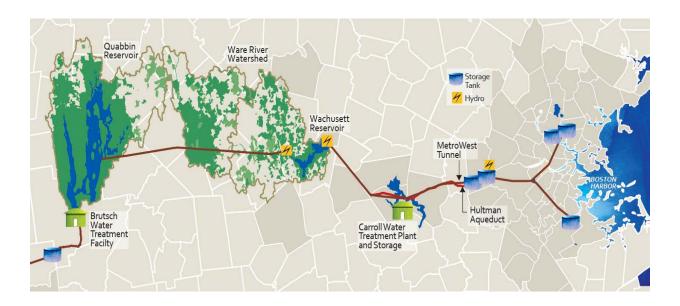

#### **Wastewater System**

- 240 miles of sewer pipelines and cross-harbor tunnels
- 11 pump stations
- 1 screening facility
- 4 CSO treatment/storage facilities
- 2 wastewater treatment plants
  - Deer Island Treatment Plant
  - Clinton Advanced Wastewater Treatment
     Plant
- 5 remote headworks
- 1 Pellet Plant for residuals processing
- Average daily flow: 365 mgd
- Peak wet weather capacity: 1,270 mgd
- Percentage of capacity utilized on average: 30%

#### Renewable Energy

28% of MWRA's energy requirement was self-generated from renewable sources (biomass, hydro, wind, & solar assets) in FY17.

#### **MWRA AT A GLANCE**

MWRA's water comes from the Quabbin Reservoir, 65 miles west of Boston, and the Wachusett Reservoir, 35 miles west of Boston. The Quabbin alone holds a 4-year supply of water.

The reservoirs are filled naturally. Rain and snow fall onto watersheds (protected land around the reservoirs) and eventually turn into streams that flow into the reservoirs. This water comes into contact with soil, rock, plants and other material as it follows its path. This process helps to clean the water.

The Quabbin and Wachusett Reservoirs are protected. Over 85% of the watershed lands that surround the reservoirs are covered in forest and wetlands. About 75% of the total watershed land cannot be built on. The natural undeveloped watersheds help to keep MWRA water clean and clear. Because they are well-protected, the water in the Quabbin and Wachusett Reservoirs is of very high quality. The MWRA has won numerous awards for quality, taste, and sustainability.

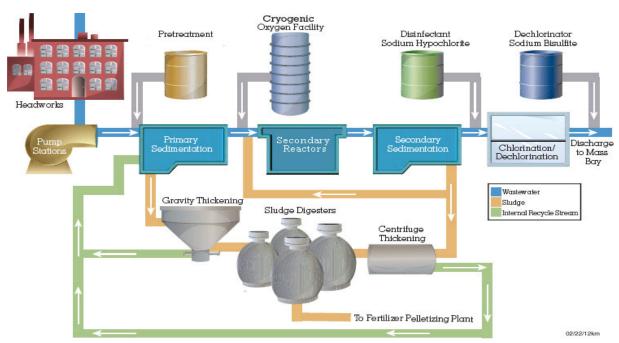

Water for most MWRA communities is treated at the Carroll Water Treatment Plant in Marlborough, Massachusetts. Water from the Quabbin and Wachusett Reservoirs enters the plant through the Cosgrove or Wachusett Aqueduct. The treated water leaves the plant through the MetroWest Water Supply Tunnel and the Hultman Aqueduct. Water from the Quabbin Reservoir for Chicopee, South Hadley Fire District #1 and Wilbraham is treated at the Brutsch Water Treatment Facility in Ware, Massachusetts, and leaves the plant through the Chicopee Valley Aqueduct.

For MetroWest and Metro Boston communities, treated water is sent through the MetroWest Water Supply Tunnel and the Hultman Aqueduct and is stored in covered tanks. From there it is drawn into distribution mains and many smaller community pipes. For Chicopee Valley Area Communities, treated water is sent through the Chicopee Valley Aqueduct to the local distribution mains and smaller community pipes. Water meters log the water entering each community.

Local pipes serve each street in the customer communities and eventually carry water into buildings. Meters installed by the local communities measure the amount of water delivered to each home or business.

To maintain and measure water quality, MWRA tests over 1,600 water samples per month, from the reservoirs all the way to household taps.

#### MWRA AT A GLANCE – Wastewater System

Water is flushed through a building's pipes into customer community sewers. These 5,100 miles of local sewers transport the wastewater into 227 miles of MWRA interceptor sewers. The interceptor sewers, ranging from 8 inches to 11 feet in diameter, carry the region's wastewater to two MWRA treatment plants. Most communities' wastewater flows to the Deer Island Treatment Plant with the Clinton Wastewater Treatment Plant serving the town of Clinton and the Lancaster Sewer District.

The following describes the Deer Island treatment process:

<u>Collection and Pumping:</u> Sewage is piped to headworks where bricks, logs and other large objects are screened out. Pumps draw the screened sewage through deep-rock tunnels under Boston Harbor to Deer Island.

<u>Preliminary Treatment:</u> Mud and sand settle in a tank called a grit chamber. This material, known as grit and screenings, is taken to a landfill for environmentally safe disposal.

<u>Primary Treatment:</u> The sewage then flows to primary settling tanks where up to 60% of the solids in the waste stream settle out as a mixture of sludge and water.

<u>Secondary Treatment:</u> Plant oxygen is added to the wastewater to speed up the growth of microorganisms. These microbes then consume the wastes and settle to the bottom of the secondary settling tanks. After secondary treatment, 80-90% of human waste and other solids have been removed.

The treated wastewater is disinfected before it is discharged to the Massachusetts Bay. The treated wastewater, known as effluent, travels through a 9.5-mile Outfall Tunnel bored through solid rock more than 250 feet below the ocean floor. The tunnel's last mile and a quarter include 55 separate release points known as "diffusers." With water depths up to 120 feet, this outfall provides a much higher rate of mixing and/or dilution than possible with discharges into the shallow waters of Boston Harbor.

Sludge from primary and secondary treatment is processed further in sludge digesters, where it is mixed and heated to reduce its volume and kill disease-causing bacteria. It is then transported through the Inter-Island Tunnel to the pelletizing plant in Quincy, Massachusetts where it is dewatered, heat-dried and converted to a pellet fertilizer for use in agriculture, forestry and land reclamation.

#### **MWRA Capital Improvement Program Overview**

In 1984, legislation was enacted to create the Massachusetts Water Resources Authority, an independent agency with the ability to raise its revenues from ratepayers, bond sales and grants. The primary mission was to modernize the area's water and sewer systems and clean up Boston Harbor. Since its establishment, the MWRA has invested over \$8.3 billion to improve the wastewater and waterworks systems serving its 61 customer communities. The system serves 3.0 million people and more than 5,500 businesses.

Since 1985, MWRA has been subject to a Clean Water Act enforcement action to end years of wastewater pollution of Boston Harbor and its tributaries from the old Deer Island and Nut Island treatment plants and combined sewer overflows (CSOs). The enforcement case was initiated by the Conservation Law Foundation in 1983 and taken up by the U.S. Environmental Protection Agency in 1985. The Commonwealth of Massachusetts, the Boston Water and Sewer Commission, the City of Quincy and the Town of Winthrop are also parties to the case.

The Orders of the Court set forth the schedules of activities to be undertaken to achieve compliance with the law. Since 1985, MWRA has complied with 420 milestones which include the completion of extensive new wastewater treatment facilities at Deer Island in Boston and Nut Island in Quincy, a residuals facility in Quincy, and 35 CSO control projects in Boston, Cambridge, Chelsea and Somerville which comprise the long-term CSO control plan, the last of which were completed in December 2015.

As part of compliance with the Court's Orders, MWRA was required to file monthly compliance and progress reports on its ongoing activities thru December 15, 2000 and quarterly compliance and progress reports thru December 2016. MWRA is currently required to submit bi-annual compliance and progress reports through December 2020.

During the same time, MWRA also complied with regulatory mandates to improve waterworks facilities. The mandated waterworks projects included the MetroWest Water Supply Tunnel, the Carroll Water Treatment Plant, and several covered water storage facilities.

The mandated projects account for most of the Capital Improvement Program (CIP) spending. The five initiatives below account for over \$6.0 billion or 74% of spending to date:

- Boston Harbor Project \$3.8 billion
- Combined Sewer Overflow \$908 million
- MetroWest Tunnel \$697 million
- Carroll Water Treatment Plant \$419 million
- Covered Storage Facilities \$239 million

As the MWRA reaches maturity as an agency, the infrastructure modernization and new facilities construction phase is nearing completion, and, barring new mandates, most of the Authority's

future capital budget will be designated for Asset Protection, Water System Redundancy, Pipeline Replacement and Rehabilitation, and Business System Support.

Asset Protection focuses on the preservation of the Authority's capital assets. Water System Redundancy aims to reduce the risks of service interruption and allow for planned maintenance of the water system assets. Long-term water redundancy will be the largest future CIP initiative with estimated spending in excess of \$1.4 billion over 17 years. Pipeline Replacement and Rehabilitation focuses on the maintenance and replacement of water and sewer pipelines. Business System Support provides for the continuing improvement and modernization of technology and security systems.

The FY19 Proposed CIP reaffirms MWRA's commitment to the community financial assistance programs on both the water and wastewater side and includes the addition of Phases 11 and 12 of the Infiltration/Inflow (I/I) Program with funding of \$120.0 million.

Capital initiatives to date have been primarily funded through long-term borrowings, and the debt service on these outstanding bonds represents a significant and growing portion of the Authority's operating budget. As of June 30, 2017, MWRA's total debt was \$5.2 billion. The Authority's debt service obligation as a percent of total expenses has increased from 36% in 1990 to 63.5% in the Final FY18 Current Expense Budget.

The MWRA's credit ratings of Aa1 from Moody's, AA+ from S&P, and AA+ from Fitch, reflect strong management of financial performance, application of operating surpluses to early debt defeasance, satisfactory debt service coverage ratios, well maintained facilities, comprehensive long-term planning of both operating and capital needs, and the strong credit quality of its member service communities.

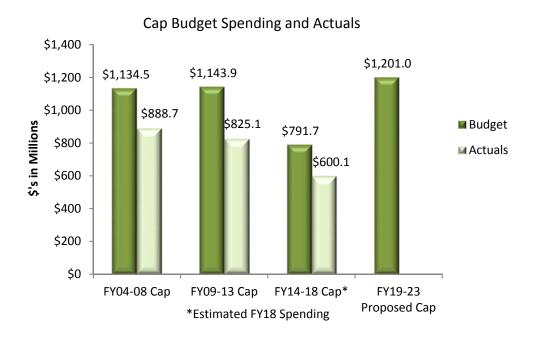

The development of the FY19 Proposed CIP presented added challenges as staff not only established the FY19 Proposed CIP, but set forth the five-year spending Cap for FY19-23 as well. FY19-23 will be the third five-year spending Cap since first introduced for the first time in 2003 to cover the FY04-08 period. The spending Cap represents targeted spending levels to ensure adequate capital funding while balancing the need for reasonable and predictable community assessments.

To arrive at the FY19 Proposed CIP and the FY19-23 spending Cap, the Authority identified the needs of the programs taking into account the recommendations of the Master Plan. The long-term strategy for capital work is identified in the Authority's Master Plan which was published in 2006, updated in 2013, and is currently being updated. The Master Plan serves as a road map for inclusion of projects in the CIP in every budget cycle.

The FY19 Proposed CIP represents an update to the FY18 CIP approved by the MWRA Board in June 2017. The spending projections put forth are the result of prioritizing the projects, establishing realistic estimates based on the latest information, striking a balance between maintenance and infrastructure improvements, and ensuring that there is adequate support for MWRA's core operations to meet all regulatory operating permit requirements.

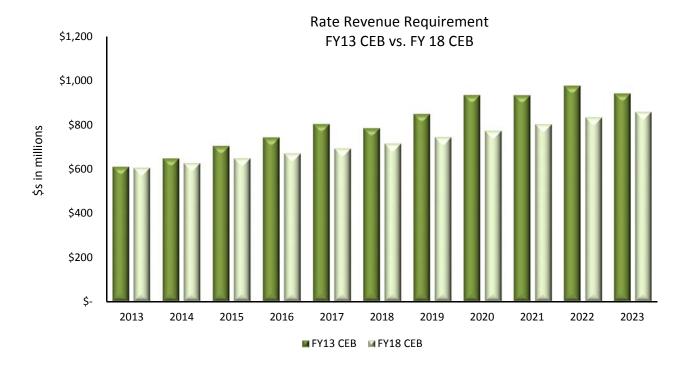

#### The Five-Year Spending Cap

The concept of a five-year spending Cap was first introduced at the Advisory Board's recommendation in 2003 for the FY04-08 period. The Cap represents targeted spending levels to ensure adequate capital program funding and to serve as a guide for long-term planning estimates and community assessments. The graph below describes the history of the past three five-year caps and the Proposed FY19-23 Cap, both in terms of the Cap levels and actual spending.

The current Cap (FY14-18) was significantly less than the prior two Caps for a variety of reasons: to meet the Authority's goal of reducing outstanding debt, the largest driver of assessment increases, to recognize the nearing of the CSO program completion, to address the economic challenges facing our communities and ratepayers, and to satisfy the Advisory Board recommendation of less than \$800 million spending for the FY14-18 Cap period.

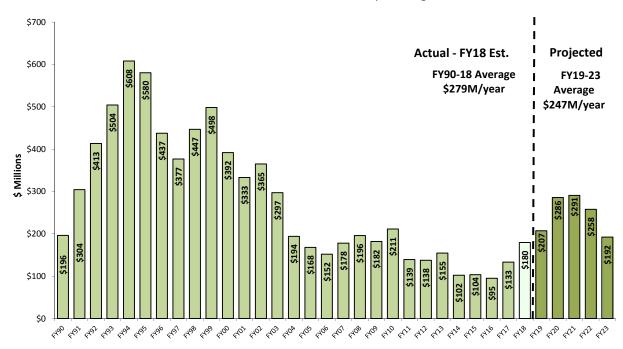

Today, the Authority is positioned much better than a few years ago to reinvest in rehabilitation and replacement of aging facilities as result of conservative fiscal management which includes judicious control of expenses and implementation the practice of debt defeasance. The debt service associated with the reduction in total bonded indebtedness has contributed to the majority of the \$804.0 million or 9.1% reduction in the Rate Revenue Requirement based on the FY18 budget versus the projections in FY13. The Rate Revenue Requirement is the amount of funding that is required to be raised for the MWRA operating budget.

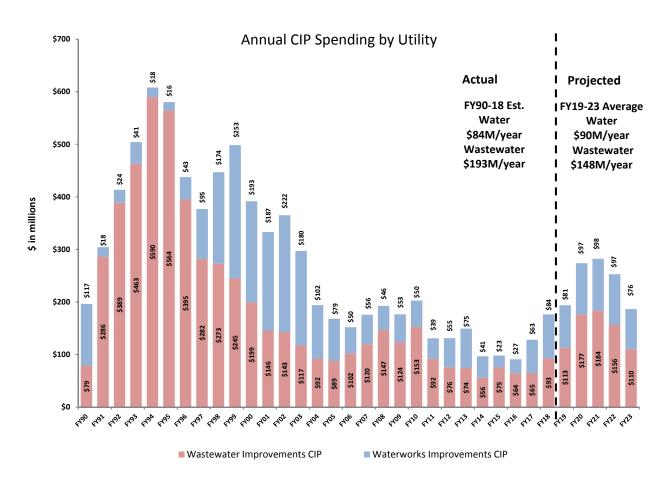

It is important to note that the spending on capital programs is largely determined by the nature, magnitude, and number of upcoming projects. In the prior five-year Caps, specifically FY04-08 and FY09-13, the majority of spending was driven by court-mandated projects and building new facilities. During the FY14-18 Cap, the Authority reached substantial completion on its court-mandated CSO Control Plan at an approximate total cost of \$910.0 million. The Authority's main focus going forward is asset protection and water system redundancy. The FY19 Proposed CIP includes approximately \$1.0 billion in future expenditures for asset protection and continues to fund the critical redundancy for the Metropolitan Tunnels System at approximately \$1.4 billion over a seventeen-year period. However, the FY19-23 period includes only \$17.0 million related to the tunnels.

The following two charts below capture the historical CIP spending through FY17 and projects spending through FY23 based on the FY19 Proposed CIP both overall at the MWRA level and by utility. Average total annual CIP spending through FY18 was \$279 million. Average annual CIP spending for the proposed FY19-23 Cap is projected to be \$247 million. Average annual CIP spending through FY18 was \$84 million for Waterworks and \$193 million for Wastewater. Average annual CIP spending for the proposed FY19-23 Cap is projected to be \$90 million for Waterworks and \$148 million for Wastewater.

#### **Total Annual CIP Spending**

#### **Total MWRA Future Spending**

The FY19 Proposed CIP projects total MWRA future spending of \$3.8 billion beginning with FY18. This is an increase of \$549.1 million over the FY18 Final CIP transmitted to the Board of Directors in June 2017, with most of the additional spending in years beyond FY19.

Incremental Change in FY19 Proposed CIP (\$s in millions)

Division	FY18 Final CIP Future Spending	FY19 Proposed CIP Future Spending	\$ Change	% Change
Wastewater	\$ 1,238.6	\$ 1,511.6	\$ 273.0	22.0%
Water	\$ 1,982.6	\$ 2,237.0	\$ 254.4	12.8%
Business & Operations Support	\$ 32.3	\$ 54.0	\$ 21.7	67.2%
Total MWRA	\$ 3,253.5	\$ 3,802.6	\$ 549.1	16.9%

Of the \$549.1 million added to the CIP, a net of \$254.9 million is due to revised construction cost estimates following completion of studies or engineering designs for the projects. Increased cost estimates may be due to updated cost estimates, such as \$29.9 million for the Deer Island Treatment Plant Clarifier Rehabilitation Project – phase 2 due to revised concrete and coating system costs, and \$10.0 million for the Deer Island Treatment Plant Sodium Hypochlorite Tank Replacement. The cost estimates may change due to revised scopes for the projects, such as \$28.3 million for Prison Point Rehabilitation Construction, \$35.5 million for Cambridge Branch Sewer Sections 23 & 24 and 26 & 27 – Construction, \$17.0 million for Deer Island Treatment Plant Electrical Equipment Upgrades 6 – Construction, \$14.0 million for Shaft 12 Isolation Gate Construction, and \$11.0 million for the Nut Island Headworks Odor Control and HVAC Improvements. Cost estimates may also decrease. The largest decrease was \$13.0 million for Winthrop Sewer Sections 4, 5, 6 & 186 – Construction, which requires less than anticipated work.

There were \$234.7 million in new projects added in the FY19 Proposed CIP, which are described in the next section. The remaining balance is due to inflation on unawarded contracts and schedule changes.

#### **FY19 New Projects**

The FY19 Proposed CIP adds \$234.7 million in new projects of which Wastewater projects added total \$105 million while Waterworks projects total \$125.2 million.

FY19 New Projects by Division (\$s in millions)

Division	Total Contract Amount	FY19-23 Spending
Wastewater	\$105.0	\$77.0
Waterworks	\$125.2	\$27.7
Business and Ops Support	\$4.5	\$4.5
Total New Projects	\$234.7	\$109.2

The following table shows the new projects added by the major programs:

#### (\$s in millions)

Project	Total Contract Amount	FY19-23 Spending
Deer Island Asset Protection	\$15.0	\$13.3
I/I Local Financial Assistance Program	\$90.0	\$63.7
Carroll Water Treatment Plant Asset Protection	\$38.3	\$2.3
Dam Projects	\$1.8	\$1.8
Sudbury/Weston Aqueduct Repairs	\$3.9	\$0.0
Watershed Land	\$5.0	\$5.0
Cathodic Protection	\$62.2	\$18.1
NHS Revere & Malden Pipeline Improvements	\$12.9	\$0.0
Waterworks Facility Asset Protection	\$0.6	\$0.0
Distribution System Facilities Mapping	\$0.5	\$0.5
Capital Maintenance Planning & Support	\$4.5	\$4.5
Total New Projects	\$234.7	\$109.2

New projects with anticipated contract amounts of \$10 million or more for Wastewater are:

Infiltration/Inflow Local Financial Assistance - Phases 11 & 12 - \$120 million (\$60 million each new phase - \$90 million of expenditures net of repayments) for rehabilitation of local sewer collection systems.

**Deer Island Wastewater Treatment Plant** - Hydroturbine Replacements - \$12.0 million to replace the two 1.1 megawatt hydroturbine generators (HTGs) at Deer Island. Electricity is generated using the gravitational force of plant effluent as it drops down the outfall shaft from the disinfection basins.

Effluent flows into the intake channel beneath each HTG by opening computer-operated wicket

gates. The hydroturbines came on line in July 2001. Because of the harsh environment at Deer Island, the equipment has reached the end of its useful life. The average savings generated by the hydroturbines is approximately \$458,000 per year.

New projects with anticipated contract amounts of \$10 million or more for Waterworks are:

**Cathodic Protection (Metropolitan System)** - \$57.0 million to replace the existing cathodic protection systems in order to maintain pipe and steel storage tank integrity.

**Carroll Water Treatment Plant Ozone Generator Replacement** - \$20.0 million to replace the ozone generators, which are currently scheduled to be rebuilt in 2022 and replaced by 2030.

Sections 13 & 48 Rehabilitation - \$12.9 million rehabilitation of 7,300 linear feet of Section 13 (36-inch cast-iron) and 7,300 linear feet of Section 48 (38-inch diameter riveted steel) in Stoneham, Malden and Melrose from the Gate House at Fells Reservoir to Pleasant Street in Malden. This project will improve hydraulics and water quality. Malden meters 16 and 187 and Medford meters 65 and 159 are connected to the distribution system via Sections 13 and 48. These four meters supply areas of the two communities at a generally higher elevation than the remaining community meters. Sections 13 and 48 are unlined cast-iron and steel water mains, respectively. Portions of these mains were disconnected from the Fells Reservoir in 1988 due to hydraulic and water quality problems, and to meet the Safe Drinking Water Act requirements.

Carroll Water Treatment Plant Ultraviolet (UV) Reactor Replacement - \$10.0 million for replacement of the UV reactors which will likely be required by 2034.

A complete list of new projects with cash flows and descriptions can be found in Appendix 3.

#### FY19-23 Five-Year Spending Cap

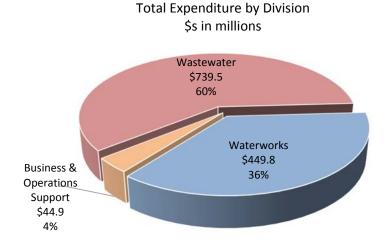

Spending during the FY19-23 timeframe is planned to be \$1.2 billion, including local community spending of \$111.8 million for the I/I loan and grant program and \$52.3 for the water pipeline loan program.

Annual cash flows for the proposed Cap period are shown below in millions:

		FY19	FY20	FY21	FY22	FY23	Total FY19-23
_	Projected Expenditures	\$207.2	\$285.8	\$290.8	\$258.0	\$192.3	\$1,234.1
Proposed	I/I Program	(14.0)	(23.2)	(27.2)	(22.4)	(25.0)	(111.8)
odo	Water Loan Program	(13.3)	(14.0)	(10.7)	(8.7)	(5.5)	(52.3)
	MWRA Spending	179.9	248.6	252.9	226.9	161.8	\$1,070.1
FY19	Contingency	12.5	17.2	17.5	15.9	11.3	74.2
-	Inflation on Unawarded Construction	0.0	8.2	15.1	18.9	15.7	58.0
	Chicopee Valley Aqueduct Projects	0.0	0.0	0.0	(0.3)	(1.0)	(1.3)
	FY19 Proposed FY19-23 Spending	\$192.4	\$274.0	\$285.4	\$261.4	\$187.7	\$1,201.0

The format of the Cap table has changed to account separately for MWRA spending, which excludes the local I/I grant and loan program and the local water pipeline loan spending which are both outside of MWRA's control. As in past Caps, contingency for each fiscal year is incorporated into the CIP to fund the uncertainties inherent to construction. The contingency budget is calculated as a percentage of budgeted expenditure outlays. Specifically, contingency is 7% for non-tunnel projects and 15% for tunnel projects. Inflation is added for unawarded construction contracts. Finally, the Cap excludes Chicopee Valley Aqueduct system projects.

Total Projected Expenditures for the Proposed FY19-23 Cap period by division is illustrated in the pie chart below:

The cumulative spending by year and by division is shown in the graph below highlighting the increased investment in wastewater during the FY19-23 Cap period.

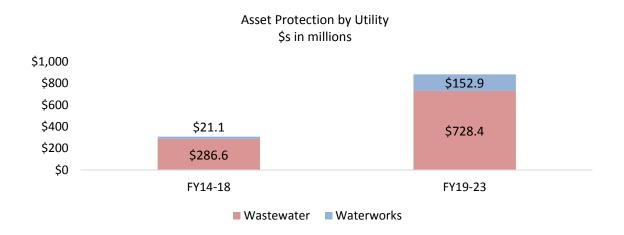

Breaking down the expenditures within each division, yearly Projected Expenditures for the Proposed FY19-23 Cap period by program are shown below in millions:

	FY19	FY20	FY21	FY22	FY23	Total FY19-23
Wastewater System Improvements	\$112.7	\$176.6	\$183.9	\$156.1	\$110.1	\$739.5
Interception & Pumping	47.1	64.5	61.6	41.1	26.6	240.9
Treatment	46.7	82.9	91.8	91.7	57.4	370.4
Residuals	4.0	3.1	0.8	1.0	1.1	10.0
CSO	0.9	2.8	2.6	-	-	6.3
Other Wastewater	14.0	23.2	27.2	22.4	25.0	111.8
Waterworks System Improvements	\$81.2	\$97.2	\$98.3	\$96.7	\$76.5	\$449.8
Drinking Water Quality Improvements	1.7	1.6	2.8	2.2	0.5	8.9
Transmission	8.3	7.3	7.9	6.6	9.2	39.3
Distribution & Pumping	49.4	68.4	66.8	67.3	57.5	309.4
Other Waterworks	21.8	19.8	20.7	20.6	9.3	92.3
Business & Operations Suppport	13.3	12.0	8.6	5.2	5.7	44.9
Total MWRA	\$207.2	\$285.8	\$290.8	\$258.0	\$192.3	\$1,234.1

It is important to emphasize that the majority of spending within the Wastewater and Waterworks programs is concentrated in several larger projects with significant spending in the FY19-23 timeframe. Project contracts with expenditures greater than \$15 million for the FY19-23 Cap total \$733.7 million, including local community assistance programs, account for nearly 60% of spending.

Project	Contract	Projected FY19-23 Expenditures \$s in millions
206 DI Treatment Plant Asset Protection	Clarifier Rehab Phase 2 - Construction	\$129.9
765 Local Water Pipeline Improvement Loan Program	LWSAP Phase 3 Distributions	90.0
765 Local Water Pipeline Improvement Loan Program	LWSAP Phase 2 Distributions	63.5
145 Facility Asset Protection	Chelsea Creek Headworks Upgrades - Construction	42.7
206 DI Treatment Plant Asset Protection	HVAC Equipment Replacement - Construction	38.8
132 Corrosion & Odor Control	NI Odor Control HVAC Improvement - Construction Phase 2	38.5
145 Facility Asset Protection	Prison Point Rehab - Construction	34.1
128 I/I Local Financial Assistance	Phase 10 Grants	32.9
128 I/I Local Financial Assistance	Phase 11 Grants	28.5
723 Northern Low Service Rehabilitation Section 8	Sec 50 & 57 Water & 21/20/19 Sewer Rehab - Construction	25.5
765 Local Water Pipeline Improvement Loan Program	Lead Service Line Replacement Loans	25.0
128 I/I Local Financial Assistance	Phase 9 Grants	22.0
128 I/I Local Financial Assistance	Phase 12 Grants	21.0
206 DI Treatment Plant Asset Protection	Fire Alarm System Replacement - Construction	20.0
628 Metro Redundancy Interim Improvement	WASM 3 - Construction 1	19.8
206 DI Treatment Plant Asset Protection	SSPS VFD Replace Construction	19.6
206 DI Treatment Plant Asset Protection	Gravity Thickener Rehab	18.0
727 Southern Extra High Redundancy & Storage	Redundancy Pipeline Sect 111 - Construction 3	17.3
722 NIH Redundancy & Storage	Section 89 & 29 Replacement - Construction	16.0
722 NIH Redundancy & Storage	Section 89 & 29 Redundancy - Construction Phase 2	15.3
628 Metro Redundancy Interim Improvement	WASM/Spot Pond Supply Mains West PRV - Construction	15.2
	Total Contracts > \$15 million	\$733.7
	% of FY19-23 Spending	59.4%
	<b>Excluding Community Loan Programs</b>	\$450.8
	% of FY19-23 Spending	36.5%
	Total FY19-23 Spending	\$1,234.1

Asset Protection accounts for the largest share of capital expenditures for the FY19-23 period, tripling the expenditure level of the FY14-18 spending cap.

#### **Future Spending**

The FY19 Proposed CIP includes \$891.8 million for Asset Protection initiatives, representing 72.3% of total MWRA spending in this timeframe. Wastewater and Waterworks Asset Protection are \$728 million and \$153 million, respectively. The Deer Island Treatment Plant Asset Protection accounts for over \$366 million in spending. Spending for water system redundancy projects totals \$229.5 million in the same FY19-23 period, accounting for 18.6% of total spending. Looking ahead to the FY24-28 Cap period, Asset Protection and the Water System Redundancy accounting for almost 100% of the total expenditures.

Changing nature of the CIP by Category (\$s in millions)

Project Category	FY14-18	FY19-23	FY24-28
Asset Protection	\$312.0	\$891.8	\$789.0
Carroll WTP	11.8	3.3	9.3
Water Redundancy	174.6	229.5	505.5
CSO	66.1	6.3	0.0
Other	49.1	103.2	-145.6
		4	4
Total	\$613.6	\$1,234.1	\$1,158.2
Total	\$613.6	\$1,234.1	\$1,158.2
Asset Protection	\$613.6 50.8%	\$1,234.1 72.3%	
			\$1,158.2 68.1% 0.8%
Asset Protection	50.8%	72.3%	68.1%
Asset Protection Carroll WTP	<b>50.8%</b> 1.9%	<b>72.3%</b> 0.3%	<b>68.1%</b> 0.8%
Asset Protection Carroll WTP Water Redundancy	50.8% 1.9% 28.5%	<b>72.3%</b> 0.3% <b>18.6%</b>	68.1% 0.8% 43.6%

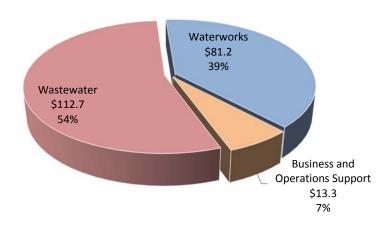

Project Category	Total FY19-23	Total FY24-28
Wastewater System Improvements	\$739.5	\$597.8
Interception & Pumping	240.9	200.6
Treatment	370.4	318.8
Residuals	10.0	47.3
CSO	6.3	Ī
Other Wastewater	111.8	31.1
Waterworks System Improvements	\$449.8	\$554.4
Drinking Water Quality Improvements	8.9	14.5
Transmission (excluding Metro Tunnels)	22.3	54.1
Metro Tunnels Redundancy	17.0	348.0
Distribution & Pumping	309.4	338.2
Other Waterworks	92.3	(200.4)
Business & Operations Suppport	44.9	-
Total MWRA	\$1,234.1	\$1,152.2

The table to the left depicts CIP projected spending for the FY19-23 Cap period and FY24-28 Cap period by major categories program Wastewater Systems Improvements, Waterworks System Improvements and Business and Operations Support. The Metropolitan Tunnels Redundancy projects accounts for the increase in Transmission spending for Waterworks in the FY24-28 Cap period. The \$200 million credit in the same period for Other Waterworks represents the repayment community water loans. Any new phase of the loan program would offset the credit.

#### **FY19 Spending**

The FY19 Proposed CIP forecasts \$207.2 million spending for FY19, of which \$112.7 million supports Wastewater System Improvements, \$81.2 million supports Waterworks System Improvements, and \$13.3 million is for Business and Operations Support. Included in the \$207.2 million are net expenditures of \$27.3 million for community assistance programs, \$14 million for local I/I program and \$13.3 million for local water pipeline program.

FY19 Expenditures by Division \$s in millions

The table below lists the twelve projects the highest anticipated expenditures in FY19:

Project	Contract	Projected FY19 Expenditures \$s in millions
	Chelsea Creek Headworks Upgrades -	
145 Facility Asset Protection	Construction	\$25.8
765 Local Water Pipeline Improvement Loan		
Program	LWSAP Phase 2 Distributions	20.3
206 DI Treatment Plant Asset Protection	Clarifier Rehab Phase 2 - Construction	16.2
	Section 89 & 29 Redundancy Construction	
722 NIH Redundancy & Storage	Phase 2	11.0
765 Local Water Pipeline Improvement Loan		
Program	LWSAP Phase 3 Distributions	10.0
727 Southern Extra High Redundancy &		
Storage	Redundancy Pipeline Sect 111 - Construction 2	8.4
206 DI Treatment Plant Asset Protection	HVAC Equipment Replacement - Construction	7.8
128 I/I Local Financial Assistance	Phase 9 Grants	7.5
727 Southern Extra High Redundancy &		
Storage	Redundancy Pipeline Sect 111 - Construction 3	7.1
	NI Odor Control HVAC Improvement -	
132 Corrosion & Odor Control	Construction 2	6.5
	Steel Tank Painting Deer Island, Bellevue 2 &	
766 Waterworks Facility Asset Protection	Turkey Hill	5.5
765 Local Water Pipeline Improvement Loan		
Program	Lead Service Line Replacement Loans	5.0
	Total Contracts > \$5.0 million	\$131.1
	% of FY19 Spending	63.3%
	Excluding Community Loan Programs	\$88.3
	% of FY19 Spending	42.6%
	Total projected FY19 Spending	\$207.2

Projects with spending greater than \$5 million in FY19, excluding local community assistance programs, account for nearly 43% of the total spending and include:

Chelsea Creek Headworks Upgrade Construction - \$25.8 million (\$77.5 million total construction cost). This major rehabilitation project includes replacement/upgrade to the screens, grit collection system, grit and handling systems, odor control

systems, HVAC, mechanical, plumbing and instrumentation. Solids handling systems are being automated and the building's egress and fire suppressions systems are also being upgraded.

Northern Intermediate High (NIH) Section 89 & 29 Redundancy Construction Phase 2 - \$11.0 million (\$22.7 million total construction cost). This is a redundancy project for MWRA's Northern Intermediate High service area. Currently, this area is primarily supplied by a single 48-inch diameter pipeline, the Gillis Pump Station, and water distribution storage from the Bear Hill Tank. This project includes a new seven-mile redundant pipeline under four construction phases. This project will provide uninterrupted water supply to the service area in the event of a failure of the existing single supply pipe and will allow the existing pipe to be removed from service for inspection, maintenance, and repair. Phase 1A was completed; Phase 1B began in January 2016. Phase 1C was awarded in November 2016 and Phase 2 was awarded in June 2017.

Southern Extra High (SEH) Redundancy Section 111 Phase 2 & 3 Construction - \$13.1 million (\$35.5 million total construction cost). This is a redundancy project for MWRA's Southern Extra High service area. This project will provide redundancy to Sections 77 and 88 serving Boston, Norwood, Stoughton, and Dedham-Westwood, through construction of a redundant pipeline. Phase 1 will be substantially complete in September 2018. Phase 2 began in October 2017 and Phase 3 is anticipated to be awarded in April 2018.

#### Nut Island Odor Control & HVAC Improvements - Construction Phase 2 - \$6.5 million (\$38.5

million total construction cost). Improvements to the Nut Island Headworks odor control, HVAC and energy management systems. These are the long-term

improvements project following the January 2016 fire and the odor control, HVAC and energy management systems evaluation contract completed in February 2017.

Steel Tanks Repainting: Deer Island, Bellevue 2, Turkey Hill - \$5.5 million (\$7.0 million total project cost). This contract includes the repainting of three (Deer Island, Bellevue 2 and Turkey Hill) out of six steel water distribution storage tanks. The remaining three steel tanks (Bellevue 1, Arlington Heights and Walnut Hill) require structural and SCADA improvements and repainting will be included with these improvements under a future contract.

#### **Deer Island Wastewater Treatment Plant Asset Protection:**

Clarifier Rehabilitation Phase 2 Construction - \$16.2 million (\$129.9 million total construction cost). This project will rehabilitate the sludge removal system in the primary tanks and the aeration/recirculation systems in the secondary tanks. The influent gates, effluent launders aeration systems, and concrete corrosion in primary clarifiers will also be addressed and repaired. This contract is

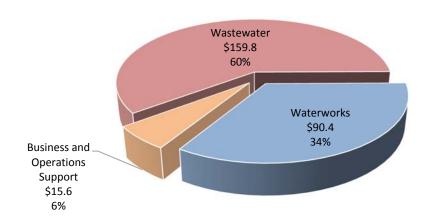

anticipated to be awarded in June 2018.

**HVAC Equipment Replacement Construction** - \$7.8 million (\$38.8 million total construction cost). This project will replace two obsolete HVAC control systems and one manufacturer's system, reducing replacement parts and improving automation. This contract is anticipated to be awarded in March 2018.

#### **FY19 Anticipated Contract Awards**

FY19 Planned Contract Awards \$s in millions

Future CIP spending is based on current and future contract awards. 46 contracts totaling \$265.7 million are projected to be awarded in FY19. The largest ten projected contract awards total \$178.0 million and are listed below, accounting for 67% of expected awards:

Project	Subphase		FY19-23 Spending illions)
133 Correction & Odor Control	NII Oday Control LIVAC Improvement Construction 2		
132 Corrosion & Odor Control	NI Odor Control HVAC Improvement - Construction 2	\$38.5	
145 Facility Asset Protection	Prison Point Rehabilitation - Construction	\$34.1	\$34.1
723 Northern Low Service Rehab Sec8	Sec 50 & 57 Water & 21/20/19 Sewer Rehab Construction	\$25.5	\$25.5
206 DI Treatment Plant Asset Protection	Fire Alarm System Replacement - Construction	\$20.0	\$20.0
145 Facility Asset Protection	Ward Street & Columbus Park Headworks Des/CA/REI	\$12.0	\$6.4
625 Metro Tunnel Redundancy	Conceptual Design - Environmental Impact Review	\$10.6	\$10.6
206 DI Treatment Plant Asset Protection	MCC & Switchgear Replacement Construction	\$10.6	\$10.6
618 Peabody Pipeline Project	Peabody Pipeline Construction	\$9.4	\$9.4
702 New Connect Mains-Shaft 7	CP3-Sect 23,24,47 Rehabilitation	\$9.4	\$9.4
206 DI Treatment Plant Asset Protection	Switchgear Relay Replacement Construction	\$8.0	\$8.0
	Top 10 Contract Awards FY19	\$178.0	\$172.4
	% of Total Awards	67%	68%
	Total 46 Contracts for FY19	\$265.7	\$253.5

#### **Community Water and Sewer Assistance Programs**

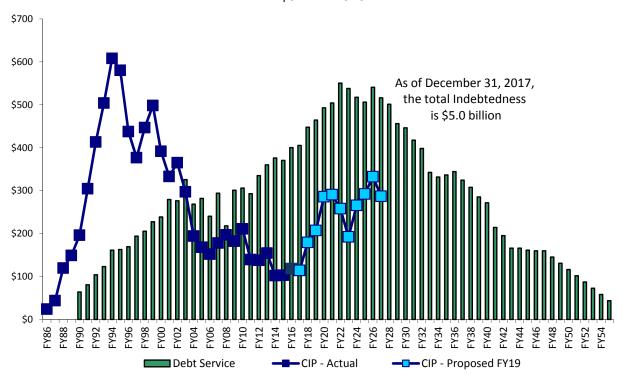

The Infiltration/Inflow (I/I) Local Financial Assistance Program provides funding assistance in the form of grants and loans for communities to rehabilitate their sewerage collection systems with the goal of structurally reducing I/I flow. The loan distribution portion of the program is repaid back to the MWRA interest free. Presently, \$13.9 million is forecasted to be spent in FY19 and \$111.8 million is forecasted during the FY19-23 Spending Cap period which is net of all repayments during these time frames. During the FY15 CIP development, Phases 9 and 10 were added to the CIP at \$80 million each to be distributed as 75% grants and 25% interest-free loans. By comparison Phases 1 and 2 were 25% grants and 75% interest-free loans. The grant/loan ratio was revised for phases 3 through 8 to 45% grants and 55% interest-free loans. Payback periods for Phases 9 and 10 were also extended from 5 years to 10 years. Distribution of funds is authorized through FY2025. During the FY19 Proposed CIP development, Phases 11 and 12 were added at \$60 million each to be distributed as 75% grants and 25% interest-free loans. All program funds are allocated to the 43 member communities based on their share of MWRA's wholesale sewer assessment. Binding commitments for funds are issued by MWRA in the form of Financial Assistance Agreements.

The Local Water System Assistance Program provides financial assistance in the form of 10-year, interest-free loans for communities to rehabilitate, either by relining or replacement, each community's proportional share of total unlined pipe miles. Presently, \$13.3 million is forecasted to be spent in FY19 and \$52.3 million is forecasted during the FY19-23 Spending Cap period which is net of all repayments during these time frames. During the FY17 CIP development, the program was expanded to include \$100 million in interest-free loans to communities solely for efforts to fully replace lead service lines. The Lead Service Line Replacement Loan Program is budgeted over twenty years, but the pace of spending for the program will depend on the level of participation by the communities, the communities' ability to work with individual homeowners and future regulatory requirements. Distributions from this program are scheduled to be made from FY18 through FY30 with repayments scheduled for FY19 through FY40.

#### **MWRA Capital Improvement Spending and Debt Service**

As of December 31, 2017, MWRA's total debt is \$5.0 billion, which \$0.2 million less than the MWRA's total debt as of June 30, 2017. However, debt service obligations are projected to increase in coming years peaking in 2022.

#### **Project Level Budget Summaries and Detail of Changes**

Information on individual project budgets and detail of changes is provided in the supplemental appendices attached to this document.

#### **CIP Review and Adoption Process**

The Advisory Board will have 60 days from the transmittal of the FY19 Proposed CIP and proposed FY19-23 spending Cap to review the budget and prepare comments and recommendations. During the review period, Advisory Board and MWRA staff will continue to meet and discuss the changes to the capital budget. The Advisory Board will then transmit its comments and recommendations to MWRA in the spring after their review. Staff will prepare draft responses to the Advisory Board's recommendations for discussion at the budget hearing. During the spring, MWRA will update the CIP to incorporate the latest information into the Final budget. In June, staff will present the FY19 Final CIP and final FY19-23 Cap to the Board for adoption.

## Wastewater System Improvements

Deer Island Wastewater Treatment Plan

#### S. 104 Braintree-Weymouth Relief Facilities

#### **Project Purpose and Benefits**

✓ Contributes to improved public health
✓ Provides environmental benefits
✓ Fulfills a regulatory requirement
✓ Extends current asset life
✓ Improves system operability and reliability

In accordance with a DEP administrative consent order, construction of relief facilities and the resulting reduction in community infiltration and inflow will provide capacity for peak sewage flow from Braintree, Hingham, Holbrook, Randolph, Weymouth, and sections of Quincy. This project will reduce surcharging in Braintree and Weymouth, and reduce frequent overflows into the Weymouth Fore River during wet weather.

#### **Project History and Background**

The Braintree-Weymouth interceptor system and pump station serves Braintree, Hingham, Holbrook, Randolph, Weymouth, and sections of Quincy. Because of population increases, the sewerage system could not handle the volume of sewage received and sewage overflows were frequent along the Weymouth Fore River during wet weather.

Interim rehabilitation work was required to ensure continued operation of the existing Braintree-Weymouth Pump Station during the long-term design and construction period. After initially proceeding with a dual track design approach for part of this project, MWRA decided to construct a deep rock tunnel rather than a marine pipeline from the new pump station to the Nut Island shaft of the Inter-Island Tunnel to Deer Island. Construction of the Emergency Mill Cove Siphon was completed in June 1998. Construction of the deep rock tunnel was completed in September 2003, and the North Weymouth Relief Intercept was completed in June 2002. The Intermediate Pump Station and sludge pumping facilities at Deer Island were completed in April 2005. The Fore River Siphons construction contract was completed in May 2005. Construction of the Replacement Pump Station was completed in April 2008. Rehabilitation of Section 624 was completed in December 2010. Remaining phases include Braintree-Weymouth Improvements.

#### Scope

Sub-phase	Scope	Status
Design 1/CS/RI – Tunnel & IPS	Design of the tunnel and Intermediate Pump Station (IPS). Includes completion of design modifications for sludge pumping facilities at Deer Island and residuals filtrate facilities at Fore River.	Completed
Sediment Tests	Tests required as part of the evaluation of marine pipeline option.	Completed
Design 2/CS/RI – Surface	Design of remaining construction including siphons and replacement pump station.	Completed
Tunnel Construction & Rescue	Construction of a 2.9-mile, 12-feet diameter tunnel beginning at the Nut Island shaft of the Inter-Island Tunnel and ending at the Fore River Staging Area. Two 14-inch sludge pipelines within the tunnel will convey Deer Island sludge from the Inter-Island Tunnel to the pelletizing plant. 0.4 miles of twin 12-inch pipelines within the tunnel will convey filtrate from the pelletizing plant to the Intermediate Pump Station. 2.5 miles of 42-inch force main will carry flows and filtrate to the Inter-Island Tunnel. Also includes a MOA with Quincy, Braintree, and Weymouth for tunnel rescue and fire support services.	Completed

Sub-phase	Scope	Status				
Intermediate Pump Station Construction	Construction of a 45-mgd pump station and headworks in North Weymouth. Also includes modifications to the sludge pumping facilities at Deer Island and the filtrate facilities at Fore River.	Completed				
No. Weymouth Relief Interceptor Construction	, , , , , , , , , , , , , , , , , , , ,					
Fore River Siphons Construction	Construction of 36-inch, 3,900-feet long twin siphons beneath the Fore River from the Idlewell section of Weymouth to the southeast corner of the Exelon Energy site in North Weymouth. Constructing 1,000 linear feet of 36-inch to 54-inch new sewers in Idlewell.	Completed				
B-W Replacement Pump Station	Construction of a new 28-mgd Braintree-Weymouth Pump Station which will handle flows from Hingham, Weymouth, and portions of Quincy.	Completed				
Rehab Section 624	Rehabilitation of 2,000 feet of Section 624 in North Weymouth.	Completed				
Mill Cove Siphon Construction  Installation of 1,700 linear feet of 42-inch siphon pipe between Newell Playground and Aspinwall Street in North Weymouth to act as second barrel of existing Mill Cove Siphon.						
Construction –Rehab Interim rehabilitation of the existing Braintree-Weymouth Pump Station.						
Community Tech Assistance	Technical assistance for the Town of Weymouth for hydraulic modeling of its sewer system, leak detection for the water system, and mitigation.	Completed				
Geotechnical Consultant	Consulting services related to the tunnel shaft excavation.	Completed				
Communication System	Communication System Radio systems for the intermediate and replacement pump stations.					
Mill Cove Sluice Gates Design and Construction  Install a single gate to provide for system flushing to reduce sediment deposition and to control odors at the Braintree-Weymouth Pump Station.						
Braintree-Weymouth Improvements Design CS/RI (9586) and Construction (7366)	Several facility modifications are needed to improve facility safety, reliability, and performance. Design and construction improvements are required to address deficiencies in odor control, solids handling, and pumping operations.	Future				

#### Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$237,018	\$227,705	\$9,313	\$0	\$1	\$291	\$6,500	2,813

Project		Status as % is approximation based on project budget and expenditures. Work that is
Status	96.1%	substantially complete includes the deep rock tunnel, N Weymouth Interceptor,
12/17		Intermediate Pump Station, Fore River Siphons contract, and the Replacement Pump
		Station. Rehabilitation of Section 624 was completed in December 2010.

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Project Cost Scheduled Completion Date			FY19-23 Spending		
FY187	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$234,493	\$237,018	\$2,525	Jan-22	Apr-26	51 mos.	\$6,588	\$6,500	(\$88)

#### **Explanation of Changes**

- Project cost change due to updated cost estimate for Braintree Weymouth Improvements Design and Construction contracts.
- Schedule and spending changes due to updated Notice-to-Proceed dates for Mill Cove Sluice Gate contracts and updated cost estimates for the Braintree-Weymouth Improvement contracts.

#### **CEB Impacts**

None identified at this time.

#### S. 130 Siphon Structure Rehabilitation

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Improves system operability and reliability

Master Plan Project **2009** Priority Rating 2 (see Appendix 3)

Design and construction of improvements to headhouses and structures.

#### **Project History and Background**

Siphon chambers are located at the upstream and downstream ends of depressed sewers. Depressed sewers are constructed to avoid obstructions in sewer alignments such as rivers and subsurface utilities. Upstream siphon chambers allow attainment of proper water elevation so that the depressed sewer flows under pressure. Downstream chambers provide transitions between depressed sewers and downstream gravity sewers.

Connecting structures are facilities at which flows from sewers are redirected to converge with or receive flows from other sewers.

There are 92 siphon chambers and 111 connecting structures in the MWRA wastewater system. Wastewater flows through many of these siphon chambers and connecting structures can be impacted by irregular maintenance due to the inaccessibility of many structures. Inadequate or reduced hydraulic capacity could in turn contribute to significant surcharges or overflows. Odor problems have also been identified at some siphon chambers and connecting structures due to hydraulic transitions.

MWRA completed a study in 1998 to evaluate rehabilitation of these structures in order to permit greater accessibility to provide regular maintenance to alleviate the above problems. 83 siphon chambers and 63 connecting structures were included in the study which recommended rehabilitation and improvements to 127 of these structures. MWRA has prioritized the design and construction of improvements to these structures. Phase 1 will provide access improvements and rehabilitation of structures at 29 siphon locations that are most inaccessible or in greatest need of repair.

#### Scope

Sub-phase	Scope			
Planning	Identification of methods to improve accessibility and structures. Inspection of the siphon chambers and diversion structures along with recommendations for rehabilitation.			
Design/CS/RI	sign/CS/RI Design, Construction Services and Resident Inspection for improvements at 29 siphon locations.			
Construction	Improvements at 29 siphon locations.	Future		

#### Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## **Explanation of Changes**

• Project cost change due to inflation adjustments on unawarded contracts.

## **CEB Impacts**

## S. 132 Corrosion and Odor Control

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Improves system operability and reliability

High sulfide levels in the Framingham Extension System cause corrosion and odors in that system and downstream in the Wellesley Extension Sewer System and West Roxbury Tunnel. A study has identified the causes of corrosion and odors and recommended corrective measures. Completion of corrosion control measures will extend the useful life of these assets and minimize the impact on the existing wastewater conveyance infrastructure. Improved odor control will mitigate the impact on surrounding areas.

#### **Project History and Background**

Hydrogen sulfide produces sewer odors and is highly corrosive to pipes and pump stations. Collapses in the Framingham Extension Sewer (FES) have alerted MWRA to problems in that area. Odor complaints have been received from residents abutting both the Framingham Extension Relief Sewer (FERS) and the Wellesley Extension Sewer (WES) systems resulting in legal claims totaling several hundred thousand dollars. Severe corrosion has occurred in the drop chamber leading to the West Roxbury Tunnel as well as documented corrosion in the tunnel itself.

While MWRA attempts to minimize odor and corrosion impacts through chemical intervention and sealing locations where odors escape, a more permanent solution is being sought. MWRA awarded a Planning/Study contract in January 1997. The consultant completed inspections in Ashland, Framingham, and Natick and drafted a report identifying, locating, and categorizing the sources and the extent of odor and corrosion problems. The Odor and Corrosion report indicated that significant levels of sulfides are discharged into the FES from Ashland and Framingham. These sulfide levels where documented to increase as the wastewater flows through the FES/FERS system. The report recommends a combination of MWRA and community actions, such as modifications to industrial discharge limits and municipal permits, chemical addition at community pump stations and the FES, and air treatment. The final planning/inspection report was completed in December 1998.

Following the Planning/Study the MWRA began the Interim Corrosion Control project. This design project included modifications to the FERS pump station, FES Tunnel, and air treatment systems. The design project was discontinued in June 2005, leaving the different project components a various level of design. At the time, a decision was made to allow other recommendations made during the Planning/Study phase to be further implemented (i.e., modifications to community collection systems, industrial discharge limits, municipal permit modifications). This decision has proven to be prudent give the significant reduction in hydrogen sulfide over the past decade. However, the high hydrogen sulfide levels are still prevalent enough to require chemical addition during the seasonal high period of the year to maintain hydrogen sulfide levels in an acceptable range for both corrosion control and to help reduce nuisance odors.

The Corrosion and Odor Control program has recently been expanded to include odor control and mechanical/electrical modification to the downstream Nut Island Headworks.

## Scope

Sub-phase	Scope	Status
Planning	Identification of causes and sources of odors; collection of local sewer system information in Ashland, Natick, and Framingham; recommendations for long-term corrective measures.	Completed
Design/CS/RI	Design, construction services, and resident inspection for FERS Pump Station, FES tunnel, and air treatment systems. By June 2005, the FERS Pump Station achieved 50% Design status, the FES tunnel achieved 30% Design status and the air treatment systems achieved 100% Design status.	Completed
Interim Corrosion Control	Implementation of chemical addition program at the FERS Pump Station. The program includes the addition of potassium permanganate, and monitoring of the wastewater flows and hydrogen sulfide levels downstream.	Completed
FES/FERS Biofilters Design & Construction	FES/FERS Corrosion Control (Biofilters) is a design and construction project to make improvements in the MWRA sewers. Three air treatment systems (biolfilters) are recommended to remove and treat hydrogen sulfide in the FES, FERS, WESR and WERS sewer systems. Rehabilitation of hydrogen sulfide meters will be included.	Future
Nut Island Mechanical and Electrical Upgrades Design CA/REI and Construction	This project provides design, ESDC/REI and construction for replacement/upgrades to the mechanical, electrical, instrumentation, and support systems at the Nut Island Headworks Facility.	Future
System-wide Odor Control Study	The prevalence of Hydrogen Sulfide gas in the collection system has been responsible for system wide odor complaints and infrastructure deterioration. This project will evaluate the system, identify the critical needs, and provide solutions.	Future
NI Headworks Odor Control and HVAC Improvements Evaluation, Design, ESDC, REI and Construction Phase 2	Design ESDC/REI and construction for improvements for the Nut Island Headworks Odor Control and HVAC systems and energy management systems. This is the long term improvements project following the January 25-26, 2016 fire and following the Contract 7494 Odor Control, HVAC and Energy Management System Evaluation completed in February 2017. Failure of the odor control system would result in odors being released to surrounding areas and the discharge limits of the facility's air permit would be exceeded.	Active

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$62,301	\$3,700	\$58,601	\$2,658	\$3,357	\$7,929	\$52,186	\$3,757

Project		Status as % is approximation based on project budget and expenditures. Odor Control
Status	7.7%	Evaluation was completed in February 2017. NI Odor Control & HVAC Design CA/REI
12/17		commenced in March 2017.

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$48,323	\$62,301	\$13,978	Sep-21	Dec-24	39 mos.	\$42,102	\$52,186	\$10,084

## **Explanation of Changes**

- Project cost change primarily due to Updated cost estimates for Nut Island Headworks Odor Control and HVAC Improvements Construction, NI Mechanical & Electrical Design CA/REI and Construction, and inflation adjustments on unawarded contracts
- Schedule changed due to updated Notice-to-Proceed dates for Framingham Extension Sewer Biofilters/Framingham Extension Relief Sewer, Nut Island Mechanical & Electrical and Nut Island Headworks Odor Control & HVAC Improvement contracts.
- Project spending changed primarily due to updated cost estimates listed above.

## **CEB Impacts**

# S. 136 West Roxbury Tunnel

## **Project Purpose and Benefits**

☑ Contributes to improved public health ☑ Provides environmental benefit ☑ Extends current asset life ☑ Improves system operability and reliability

#### Master Plan Project **☑** Priority Rating 1 (See Appendix 3)

Investigation and rehabilitation of the West Roxbury Tunnel sewer. This sewer, built in 1964, transports flows from the Wellesley Extension Relief Sewer System through the West Roxbury portion of Boston to the High Level Sewer. A structural failure could result in surcharging and overflows.

#### **Project History and Background**

During construction of the Wellesley Extension Replacement Sewer and inspection of the tunnel in 1999, visual observations indicated that severe corrosion due to hydrogen sulfide had occurred in a portion of the sewer directly upstream of the West Roxbury Tunnel (WRT), and that the tunnel entrance structure had lost cement lining, exposing the reinforcing steel. Manholes and other structures had been affected more severely.

A structural failure of the WRT would affect the tributary communities of Ashland, Brookline, Dedham, Framingham, Natick, Needham, Newton, Wellesley, and the Hyde Park and West Roxbury portions of Boston. Local failure of the tunnel could result in the discharge of 53 to 128 mgd of raw sewage into the Charles River until emergency repairs could be made, back-up of sewage into local residences and businesses, and the interruption of service to as many as 125,000 people. Section 138 is immediately upstream of the tunnel and crosses beneath the VFW Parkway in West Roxbury. Structural failure beneath this major transportation corridor would result in a severe public safety hazard.

Design for structural repairs to Section 138 and the West Portal of the tunnel were completed in June 2001. Construction of these repairs, Contract 6569, repairs to Sections 137 & 138, including the slipline of Section 138, were completed in June 2002. The design contract to rehabilitate the tunnel was awarded in February 2009 and ended in June 2011. The tunnel was inspected in August 2010 and there has been negligible deterioration since the 1999 inspection. Based on these findings and the significant reduction in hydrogen sulfide levels in the tributary sewers over the past decade, it was determined that the tunnel is not in need of immediate repair. In lieu of immediate repair, a tunnel inspection program will be implemented to monitor the conditions of the tunnel.

Sub-phase	Scope	Status
Inspection	Inspection of Section 137 of the West Roxbury Tunnel, which includes 12,500 linear feet of 84-inch reinforced and unreinforced concrete tunnel. Initial inspection completed in 1999.	Completed
Design/CS/RI	Design, construction services, resident inspection for corrective actions to repair/rehabilitate 1,000 feet of Section 138 and the West Portal, and a conceptual design report for the rehabilitation of the tunnel. Design/construction completed in June 2002.	Completed
Construction	Rehabilitation of 1,000 feet of Section 138 and the West Portal. Completed in June 2002.	Completed

Tunnel	Inspection contract to monitor the conditions of the tunnel in 10 years	Future
Inspection		

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## **Explanation of Changes**

• Project schedule changed due to project priorities.

## **CEB Impacts**

## S. 137 Wastewater Central Monitoring

## **Project Purpose and Benefits**

✓ Extends current asset life.
 ✓ Results in a net reduction in operating costs
 ✓ Improves system operability and reliability

To study, define, design, and implement a centralized monitoring and control system most appropriate for MWRA's wastewater transport system. Through facility automation and remote monitoring and control, SCADA implementation will result in cost savings and improve wastewater system operation and maintenance.

## **Project History and Background**

MWRA has implemented automation and central monitoring and control of its water and wastewater systems and facilities. Substantial investments have been made in implementing such systems for the Deer Island Treatment Plant, and Supervisory Control and Data Acquisition System (SCADA) implementation is fully operational at the wastewater transport facilities and the water conveyance and treatment system.

The SCADA Master Plan, which was completed in July 1999, recommended expansion of the automated control concepts developed for water system operation and identified long-term savings related to staffing reductions and optimization of operations and maintenance. Following the master planning recommendations, a detailed scope of services was prepared to procure professional services contract to provide design, integration, training, construction administration and resident inspection services for various SCADA improvements. Camp Dresser & McKee, Inc. (CDM) was awarded this contract in June 2002. The construction effort on the first and most complex of two construction packages began in March 2006 and reached substantial completion in January 2008. This construction addressed SCADA needs at most pumping and CSO facilities, as well as establishing overall data communications improvements. The second construction package provided for SCADA needs at the remote headworks facilities, taking into consideration future CIP improvements at Chelsea, Columbus Park, and Ward Street Headworks facilities. This contract reached substantial completion in July 2009.

Additional CIP sub-phases have been added and are being implemented to replace existing SCADA equipment that is nearing the end of its useful life or is no longer supported by the manufacturer. Additional efforts will be performed to enhance SCADA communications and improve on computer graphics used by operators to monitor and control facilities (Human Machine Interfaces) and PLC related systems to improve upon cyber security and maintainability.

Sub-phase	Scope	Status
Planning	Development of a plan for a monitoring and control system for the MWRA wastewater transport system.	Completed
Design and Integration Services	Includes design, integration (PLC programming, operator graphics development, MIS/CMMS data transfer), and development and implementation of training. Also covers preparation of documentation and manuals for automating equipment and systems and for remote monitoring and control of the wastewater transport systems and facilities. Includes construction administration, engineering services during and after construction, and resident inspection.	Completed

Sub-phase	Scope	Status
Construction 1 (CP1)	Construction and installation of SCADA equipment and systems at seven pumping facilities, three CSOs and one screen house. Also covers Operation Control Center improvements. Facilities include Alewife, Caruso, Hingham, New Neponset, Hayes, Delauri, Houghs Neck, Chelsea Screen House, Cottage Farm, Prison Point, and Somerville Marginal. This construction package included the major components of the SCADA communications infrastructure (microwave radios, routers, etc.).	Completed
Construction 2 (CP2)	Construction and installation of SCADA instrumentation and control equipment at the three older headworks facilities and Nut Island Headworks. OCC improvements were also made to support these additional facilities.	Completed
Equipment Prepurchase	Purchase SCADA system components including computer hardware to ensure consistency with MWRA MIS infrastructure through existing Commonwealth of MA blanket contracts and low cost small quantity system components (ex. fuel tank monitoring units and interfaces, Prison Point Flow meter, CSU/DSUs), and additional instrumentation and control equipment at the Arthur St. Pump Station to ensure consistency and/or compatibility with installed systems.	Completed
Technical Assistance	Technical assistance work to support all subphases.	Completed
Wastewater Redundant Communications	To study and implement redundant communications alternatives for Wastewater facilities, with an emphasis on wireless options. It is critical to have alternative communication if an important facility alarm does not reach the Operations Control Center.	Future
Wastewater SCADA/PLC Upgrades Design and Programming Services, Construction, and Equipment Hardware	Replacement of existing SCADA PLCs nearing their end of useful life with an updated PLC platform. New PLC platforms further provide increased security capabilities, improved programming functionality and maintainability enhancements. Secondary goals include standardizing PLC logic and HMI graphics, and upgrading aging field instrumentation. Project includes Design and Programming Services, Construction, and Equipment Hardware.	Active

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$27,482	\$19,782	\$7,700	\$140	\$140	\$400	\$2,460	\$5,100

Project		Status as % is approximation based on project budget and expenditures.
Status	72.0%	Construction 1 contract was substantially complete in December 2007. Construction
12/17		2 contract was substantially complete in July 2009. Wastewater SCADA/PLC Upgrades
		Design and Programming Services is expected to begin in April 2018.

## **Explanation of Changes**

• Spending changed primarily due updated cash flow for Design & Programming Services.

## **CEB Impacts**

# S. 139 South System Relief Project

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Improves system operability and reliability

To protect public health and property from sanitary system overflows and back-ups into homes and businesses during extreme wet weather events. Completion of the project will also extend the useful life of system assets and potentially avoid extraordinary costs resulting from system failures.

#### **Project History and Background**

#### Archdale Road Diversion Structure

On October 20, 1996 a 100-year rainstorm caused the MWRA High Level Sewer (HLS) (Section 70) to overflow in the area of Archdale Road in Boston. Following this overflow event, MWRA established a task force to recommend action to mitigate and/or prevent future overflows. The task force developed an emergency response plan and examined several relief alternatives. The first component of the recommended relief plan consisted of construction of a diversion structure that includes two 30-inch by 60-inch sluice gates connecting the HLS to BWSC's Stony Brook drainage conduit. The diversion structure is located at the end of Bradeen Street in Roslindale. If, based on monitoring results, it appears that the High Level Sewer is about to overflow in the Archdale Road area due to an extraordinary storm event, the overflow volume is diverted to the Stony Brook Conduit through the sluice gates. This eliminates the need to deploy large emergency response crews to build temporary sandbag dikes. Construction of the diversion structure was completed in August 1999.

#### High Level Sewer Repair

Subsequent to the October 1996 storm, MWRA initiated some short-term modifications to the sewer system to reduce overflows. However, during a June 1998 storm, these modifications actually pressurized the HLS. As a result, MWRA began an emergency evaluation of the HLS in June 1998 to analyze its hydraulic capacity and structural integrity. The evaluation, which was completed in January 1999, discovered cracking at a 77-degree bend in the sewer in the Archdale Road area that required immediate attention. Inspection also indicated that approximately 40 feet of the HLS, located in the Arnold Arboretum, needed repair. A construction contract notice to proceed was issued in June 1999 and construction was completed in October 1999.

#### Outfall 023 Cleaning and Structural Improvements

Following the October 1996 storm, the City of Boston engaged a consultant to review the events and recommend remedial actions to prevent future flooding under similar conditions. One recommendation was to clean sediment and debris from the Stony Brook Conduit. Boston Water & Sewer Commission (BWSC) has cleaned the upstream portion of the conduit and MWRA has cleaned the outfall from the Metropolitan District Commission (MDC) gatehouse at Charlesgate to the Charles River. This part of the project also covers structural modifications to Outfall 023 to permit access points and diversion capabilities for future cleaning. This portion of the project has been moved out to fiscal year 2019. Staff will continue to periodically inspect the outfall for increased sedimentation levels and report if schedule modification need to be made.

#### Milton Financial Assistance

Two residential areas in the Town of Milton have experienced sewage backups into homes during wet weather events and periods of prolonged wet weather. One area affected is a direct tributary of MWRA's High Level Sewer and the other is a tributary to MWRA's New Neponset Valley Sewer. In September 1999, MWRA and Milton entered into a financial assistance agreement to fund design and construction of new sewers, rehabilitation of an existing pump station, and construction of a new pump station to mitigate downstream impacts from high flow conditions in the improved High Level Sewer.

## **Pump Station Feasibility**

MWRA considered investigating the feasibility of constructing a small pump station to convey wastewater from a small area of Quincy away from the Braintree Howard Street Pump Station. The flow would be re-routed back to the Quincy collection system. The City of Quincy would own and operate the pump station. Upon further evaluation, MWRA has decided to delete this project and instead, will continue an MOU with Braintree to pay the town annually for use of 25 percent capacity of Braintree's Howard Street Pump Station.

#### Scope

Sub-phase	Scope	Status
Archdale Des/CS/RI and Construction	Design, construction services, and resident inspection for the Archdale Road Diversion Structure. Construction of an underground diversion structure that houses two 30-inch by 60-inch horizontal sluice gates on the sidewall of the HLS. This structure controls flow into BWSC's Stony Brook Conduit.	Completed
Sections 70 and 71 HLS Evaluation/ Construction	Initial evaluation and construction of recommended improvements.	Completed
Construction and Improvements for Outfall 023	Removal and disposal of sediment and debris from Outfall 023 as well as continuation of structural improvements to enable future cleaning operations.	Future
Milton Financial Assistance	Payment to the Town of Milton for local projects to mitigate downstream impacts from high flow conditions.	Completed

## Expenditure Forecast (in \$000s) and Project Status

## **Explanation of Changes**

• Project schedule shifted due to project priorities.

## **CEB Impacts**

# S. 141 Wastewater Process Optimization

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Improves system operability and reliability

To optimize wastewater system operating procedures and make system improvements and modifications to ensure maximum wastewater treatment, minimum operating and maintenance costs, and extension of the useful life of system assets.

#### **Project History and Background**

This project was established to support MWRA Business Plan strategies, which recommend the development of a wastewater process optimization plan, central monitoring facilities for the sewerage system, rehabilitation of wastewater interceptors, and the utilization of automation and new technology to increase efficiency.

The completed planning phase included the development of an updated hydrologic and hydraulic model (InfoWorks CS) and the evaluation of optimization alternatives under typical and extreme storm events. MWRA has evaluated several of the alternatives and has been using hydraulic information gained during this phase to develop facility control logic under the Wastewater Transport SCADA Implementation Project. Two alternatives, which include pipeline modifications, will be taken further as defined below. The model developed under this project continues to be used by MWRA staff for in-house system evaluation and NPDES reporting requirements and by outside consultants to support CSO-related and collection system improvement projects.

Sub-phase	Scope	Status			
Planning	Evaluate collection system and facility modification alternatives to maximize wastewater treatment and minimize operating and maintenance costs.	Completed			
Somerville Sewer	Design and construct a connection between the upstream end of the Somerville Sewer and the North Metropolitan Relief Sewer to reduce surcharge and divert flow away from the Cambridge Branch Sewer and Delauri Pump Station.				
Siphon Planning	phon Planning Further evaluate the benefits of constructing a redundant siphon crossing the Mystic River from the Cambridge Branch Sewer to the DeLauri Pump Station to assist in frequency of CSO discharges.				
North System Hydraulic Study	Review the frequency and extent of sanitary sewer overflows (SSOs) in the area tributary to Chelsea Creek Headworks and to evaluate and recommend alternatives to optimize the performance of the collection system and to eliminate or reduce SSOs or relocate them to minimize potential human health risks or environmental impacts.	Completed			
Hydraulic Flood Engineering Design and Construction— North System	Future implementation of system optimization measures or more significant system modifications which will be identified during the initial study. Additional follow-up analysis or project implementation may be done under this phase.	Future			

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$10,306	\$1,502	\$8,804	\$0	\$297	\$0	\$1,362	\$7,442

Project Status 12/17	14.6%	Status as % is approximation based on project budget and expenditures. The Notice-to-Proceed for the North System Hydraulic Study was completed in June 2015.
----------------------------	-------	---

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.

## **Explanation of Changes**

- Project cost change due Siphon Planning phase to be done under Cambridge Branch Sewer Study.
- Schedule and spending shifted due to updated schedule for Hydraulic Flood Engineering Design and construction.

## **CEB Impacts**

# S. 142 Wastewater Metering System – Equipment Replacement Project

#### **Project Purpose and Benefits**

☐ Replace Existing Permanent Wastewater Metering System
☐ Evaluate and Update Community's Flow Metering Methodologies
☐ Continue providing the most accurate and reliable Wastewater metering data for rates
☐ Improves system operability and reliability

The Wastewater metering system primary purpose has been to quantify wastewater flow from each of the 43 MWRA wastewater member communities for use in the formulation of sewer charges. The existing metering system is 12 years old, it was designed with a life expectancy of 7 to 10 years; it is still running reasonably and MWRA's staff has taken great care to ensure that the accuracy and reliability of meter data is not affected and the metering data is based upon sound engineering and business practices for rate purposes. The project will include planning, design, and Resident Engineering/Inspector (REI) services for the replacement of the wastewater metering system, conduct wastewater flow measurements in unmetered areas and incorporate them in the evaluation of existing community metering methodologies

#### **Project History and Background**

The MWRA's permanent wastewater metering system was initially constructed in 1994. The primary purpose has been to quantify wastewater flow from each of the 43 MWRA wastewater member communities for use in the formulation of sewer charges, which includes a flow-based component. Other uses of the data include collection and treatment system analysis and planning, infiltration and inflow quantification in member communities, use in hydraulic models and to a limited extent, operations support.

In 2005 the first wastewater metering system replacement project was completed, the existing MWRA wastewater meters were installed with wireless phone communication and data collection system. Currently the wastewater metering system consist of 212 metering sites located throughout the 43 wastewater member communities, 189 are rate meters and 23 non rate meters. Of the 212 meters, 187 are located inside of sewer manholes and 25 Remote Terminal Units (RTU) are installed inside of MWRA and community facilities. The majority of the meters are installed in gravity sewer lines, owned and operated by the Authority or its member communities. These sewer lines have various pipe shapes, ranging in size from 8 inches to 150 x 138 inches, with manhole depths ranging from 5 feet to over 40 feet deep. The metering sites are located in residential, commercial and industrial areas.

Contract 6739 is comprised of two phases. Phase One includes the evaluation, planning and design of the wastewater metering system of approximately 225 permanent meter sites. Phase Two consists of the metering system replacement installation which includes Resident Engineering and Resident Inspection Services to oversee meter equipment installation and acceptance.

Under Phase One of this project, the flows from all unmetered areas will be updated, using temporary meters, weirs and instantaneous depth of flow and velocity measurements, to account for any changes in flow from those areas over time. The metered areas and meter locations will be evaluated and recommendations to improve the percentage of metered flow above the 85% threshold will be considered where is reasonably feasible bearing in mind the benefits of adding meters versus associated capital and operational/maintenance cost. All existing and any proposed new metering sites will be evaluated and for each meter location the most suitable meter type to provide flow data with a high degree of accuracy and reliability will be recommended.

Phase One also includes the evaluation of the most current and emerging wastewater metering, wireless communication, data collection and analysis software technologies, including reviews of similar systems currently

in use elsewhere in the country. The metering system replacement design documents (plans and specifications) for public bidding will be prepared for Contract 7191 and title Permanent Metering System Equipment Purchase and Installation.

Phase Two will include Resident Engineering and Resident Inspection Services to oversee meter equipment installation and acceptance plus the one-year warranty period. The purchase and installation of the meters will be a separate contract overseen by the Phase 2 services.

The wastewater metering system evaluation (including field evaluation and measurement of currently unmetered areas), planning, design and bidding services for purchasing a replacement meter system and equipment is estimated to take 26 months from Notice to Proceed. Phase 2 meter installation and acceptance is estimated to take 15 months, followed by a 12-month warranty period.

## Scope

Sub-phase	Scope	Status
Planning/Design/REI	Development of a long-term plan to upgrade or replace the existing wastewater metering system (technology, hardware, software, telemetry). Conduct Wastewater flow measurements in unmetered areas, evaluate and update Community Flow Formulas (CFF). Oversee purchase of metering system and perform REI services during meter installation.	Active
Equipment Purchase/Installation	Purchase and installation of equipment.	Completed
Meter Power Design/CA/RI	Design services for the supply of power and enhanced wireless communications to approximately 50 permanent wastewater metering sites. The data from these key sites will be used to optimize MWRA operation and maintenance activities during normal and wet weather conditions.	Future
Construction Meter Installation	Install meters in locations identified in the planning/design phase.	Future
Wastewater Metering Asset Protection/Equipment Purchase	Rehabilitation, replacement and upgrades (planning, design and construction) for the Wastewater Metering System to be required every 10 years over the 40 year planning period. Includes meter purchases.	Future

## **Explanation of Changes**

• Project spending changed due to award amount for Planning/Study/Design contract was less than budgeted.

## **CEB Impacts**

Potential cost savings associated with this project have yet to be be quantified.

# S. 145 Interception and Pumping Facility Asset Protection

## **Project Purpose and Benefits**

☑ Extends current asset life
☑ Improves system operability and reliability

To protect the investment of MWRA ratepayers by ensuring timely replacement of equipment and systems.

## **Project History and Background**

This project was developed to ensure that MWRA maintains ongoing service while optimizing operations in its wastewater facilities. This project, in its current form, addresses immediate critical facility and equipment issues. This project will eventually include five areas:

- 1. Equipment replacement (pumps, HVAC equipment, blowers, etc.).
- 2. Architectural projects (concrete corrosion, etc.).
- 3. Utilities projects (water, sewer, drainage, electrical wiring, heating system, etc.).
- 4. Support Projects (process control system upgrades, etc.).
- 5. Specialty Projects (instrumentation upgrades, fuel storage tanks, etc.).

The Interception and Pumping Asset Protection project will be ongoing throughout the useful life of the facilities.

Sub-phase	Scope	Status
Rehab of Section 93A Lexington	Rehabilitation of 4,000 linear feet of pipeline in Lexington (Section 93A). Completed in April 2004.	Completed
Sections 80 and 83	Evaluation of the condition of Sections 80 and 83 and design and construct repairs to damaged portions. TV inspection revealed numerous cracks and holes, which impair the structural integrity of the pipe. Contract completed in September 2007.	Completed
Section 160	Rehabilitation of 11,000 linear feet of Section 160 of the Mystic Valley Sewer in Winchester due to extensive deterioration of the brick and concrete sewer. Rehabilitation of sewer completed.	Completed
93A Force Main Replacement	Replacement of 1,100 feet of 24-inch ductile iron force main due to extensive corrosion from hydrogen sulfide. Contract was substantially complete in January 2007.	Completed
Mill Brook Valley Sewer Sec 79 & 92	Rehabilitation of a portion of Section 79 pipeline in Arlington. Under MOU trust agreement, MWRA to absorb 50% of total cost of rehabilitation.	Completed

Sub-phase	Scope	Status
Interceptor Renewal No. 1 Reading Extension & Metropolitan Sewer Design CA/RI (7163) & Construction (7164)	Reading Extension Sewer (Sections 75, 74, and 73), rehabilitation of 12,400 linear feet of 15, 18, 20-inch Vitrified Clay (V.C.) pipe, primarily in Stoneham, with short reaches in Wakefield and Woburn. Approximately 1,400 linear feet of Reading Extension Sewer Section 74 were CIPP lined in the mid 1990's. Also, included is rehabilitation of 2,280 linear feet of 15-inch V.C. pipe of the Metropolitan Sewer Section 46 in Stoneham. Construction contract 7164 was issued a NTP in August 2017.	Active
Interceptor Renewal No. 3 Dorchester Interceptor Sewer Design CA/RI and Construction	Rehabilitation of Dorchester Interceptor Sewer Sections 240, 241, and 242.	Active
Study Cambridge Branch 27,26,25, 25.5, 24,23	The Cambridge Branch Sewer was completed between 1892 and 1895. The study will evaluate rehabilitation needs, feasibility, and scope.	Completed
Design/ESDC/REI and Construction Cambridge Branch 1 Sections 27, 26	Design and construction of the Rehabilitation of Cambridge Branch Sewer Sections 27 and 26 in Charlestown, Somerville, and Cambridge.	Future
Design/ESDC/REI and Construction Cambridge Branch 2 Everett Sections 23 and 24	Design and Construction of the Rehabilitation of Cambridge Branch Sewer Sections 23 and 24 in Everett and Charlestown. Rehabilitation of Sections 25 and 25.5 to be determined.	Future
Malden & Melrose Hydraulics and Structural Study/Design and Construction	Rehabilitation of Melrose, Malden Sections 41,42,49,54 and 65.	Future
Melrose Sewer	Design and construct an 18-inch diameter sewer extension of an existing MWRA sewer on Melrose St. to reduce MWRA sewer overflows at the Roosevelt School. The construction contract was awarded in January 2010 and completed in September 2010.	Completed
Interceptor Renewal No. 5 New Neponset Valley Sewer Sections 607/608/609/610 Design CA and Construction	Rehabilitation of 15,000 linear feet of New Neponset Valley Sewer in Milton. Procurement of a design consultant is ongoing.	Active
Interceptor Renewal No. 6 Chelsea Sections 12/14/15/62 Design CA/REI and Construction	Rehabilitation of portions of Sections 12/14/15/62 in Chelsea.	Future
Prison Point HVAC Upgrades, Design & Construction	The HVAC system improvements are complete and included the replacement of components for the HVAC system as well as the ductwork, air handling equipment, dampers, louvers, and odor control were in need of upgrade. The conversion of the control system for the HVAC to electronic digital control was completed in FY05/FY06 under the CEB. The diesel engine fuel system modifications at this facility were completed under the SCADA contract and included the fuel oil delivery feed to the system boiler.	Completed

Sub-phase	Scope	Status
Remote Headworks Heating System Upgrades	Existing boilers at each of the remote headworks require significant maintenance and consume substantial fuel. A preliminary design report was completed and alternative energy-saving systems are recommended to replace the existing heating systems. The replacement of the existing heating system at the Chelsea Creek Headworks was completed. The systems at Ward Street and Columbus Park will be replaced under the Remote Headworks Upgrade Project.	Completed
Remote Headworks Concept Design	A Concept Design was performed to identify the needs of the three remote headworks facilities to recommend equipment replacement and upgrades for further design and construction. The Concept Design included a Condition Assessment of all equipment and non-equipment assets to establish a basis for improvements and upgrades to meet business goals and objectives.	Completed
Hingham Pump Station Isolation Gate Construction	The Hingham Pump Station was built without an influent gate. The station services the Town of Hingham and had no direct means to isolate the flow to this station. Labor intensive and inefficient means using stop logs, sand bags, sewer plugs and pumps were required to isolate and divert flow. This project included the design and installation of a sluice gate in a diversion chamber, to isolate the station and bypass flow allowing maintenance to take place in the station without interruption of service.	Completed
Alewife Brook Pump Station Rehabilitation Design CA/RI and Construction	The Alewife Brook Pump Station was built in 1951. The wet weather pumps are original equipment. The rehabilitation includes replacing the three wet weather pumps, motors, and piping, replacing the influent screens and grinders, updating the HVAC system, upgrading the electrical system, remediating PCB-containing paints, and modifying the building interior to meet current building codes, energy efficiency improvements, flood protection measures, and security improvements.	Active
Chelsea Screenhouse Upgrades and ESDC/REI	The Chelsea Screenhouse has four climber screens and seven hydraulic gates and was built to screen sewerage upstream of the Chelsea Creek Siphons and Caruso Pump Station, and to provide screening of flows diverted from the Chelsea Creek Headworks during wet weather events. Most of the operating equipment has passed its useful lifespan. A preliminary evaluation of the gates in 2007 identified maintenance and operational issues. In November 2011, a conceptual design report for the facility was performed within the Remote Headworks Upgrades Design contract, with recommendations for replacements and upgrades to equipment at the facility. A task order, under the As-Needed Technical Assistance contract, was executed in August 2012 to perform final design of the upgrades. ESDC/REI is being performed under a separate contract.	Completed

Sub-phase	Scope	Status
Nut Island Headworks Fire Alarm/Wire Conduit	This project will replace the existing obsolete and problematic fire alarm system and faulty wiring at Nut Island Headworks. There have been significant repair costs over the past several years to keep the system functional and to correct deteriorated connections and ground faults. An engineering task order was used to design upgrades to the system and upgrades and replacements were completed in FY10.	Completed
NIH Electrical & Grit/Screenings Conveyance System Design CA/RI & Construction	This subphase includes the design and construction of improvements to the electrical system, which is subject to groundwater infiltration, and to the grit and screenings conveyance system which have alignment and operations problems, at the Nut Island Headworks. Based on final preliminary design reports completed in July and August 2011, recommendations were made to improve or replace these systems. Design recommendations were included in one construction contract.	Completed
Headworks and DI Shafts Study, Design CA/REI and Construction	At each of the four remote Headworks, Chelsea Creek, Ward Street, Columbus Park and Nut Island, the wastewater is discharged into a vertical shaft connected to a tunnel that conveys the sewage to the Deer Island Treatment Plant. A past inspection of the shaft at Chelsea Creek indicated that the walls of the shaft are severely deteriorated. Failure of a shaft could incapacitate the Headworks facility. There is concern this may cause additional problems at Deer Island. To-date, there have been no reported issues but it is suggested that deterioration of the interior surfaces could be detrimental to pumps or other wastewater equipment. This study will provide a detailed inspection of the four headworks shafts as well as the three shafts receiving flow at the DITP. The study will also include evaluation of shaft ventilation and replacement of the grating and instrumentation at the three older headworks facilities. This study will be followed by a design, construction administration/RE contract to perform the improvements recommended in the study phase. Evaluation and rehabilitation of the shafts is critical to maintaining wastewater flows through the remote headworks facilities to Deer Island for treatment.	Future
Remote Headworks Upgrades Design CA/ESDC/REI and Construction	The Remote Headworks Preliminary Design proposed recommendations to upgrade the Chelsea Creek, Columbus Park, and Ward Street Headworks, which will be included in final design and construction documents. The recommendations include replacement/upgrades to the screens, grit and screenings collection and conveyance systems, odor control, HVAC, mechanical, plumbing, instrumentation, PCB removal, and electrical systems, as well as antenna towers. Chelsea Creek Headworks Upgrade construction is ongoing, and will be followed by design and construction contracts for Ward Street and Columbus Park Headworks. Chelsea Creek Headworks REI is being performed under a separate contract.	Active

Sub-phase	Scope	Status
Columbus Park and Ward St. Headworks Upgrades Design ESDC/REI and Ward Street Headworks Construction and Columbus Park Headworks Construction	The recommendations from the Remote Headworks Preliminary Design include replacement/upgrades to the screens, grit and screenings collection and conveyance systems, odor control, HVAC, mechanical, plumbing, instrumentation, and electrical systems, as well as antenna towers for the Columbus Park and Ward St. Headworks.	Future
Pump Station/CSO Condition Assessment	This project provides professional engineering services including planning, inventory, evaluation, identification and prioritization of rehabilitation/replacement projects and operational processes for certain older pump stations and CSO facilities.	Future
Cottage Farm Fuel System Upgrade	Replacement of existing fuel oil system to meet current code requirements, ensure reliable operation, and provide safeguards against accidental oil spills.	Completed
Somerville/Marginal Influent Gates and Stop-Log Replacement	The Somerville Marginal facility has two 5'X6' sluice gates that were installed in 1987. These 22-year old gates are used to hold wastewater in the upstream combined sewer system until the level reaches a predetermined elevation, at which point the sluice gates are opened and the facility is activated (chemicals added, screenings removed). The treated CSO is conveyed to the MWRA permitted CSO discharges MWR205 or MWR205A, upstream and downstream of the dam on the Mystic River. During October of 2009, MWRA staff discovered non-continuous, wet weather gate leakage. Repairs to the gates were made and an air barrier was created using stop planks and temporary sump pumps upstream of the gates to minimize gate leakage. However, given the age and frequent problems with these gates and need to create a more permanent and effective barrier between the CSO system and downstream receiving waters, this project was initiated. The project will replace the facility gate, as well as upstream and downstream stop planks and install permanent sump pumps downstream of the gates to create an air void to ensure CSO does not enter the receiving waters until a facility activation is required. Project design was completed under Task Order 20 (contract 7070) and construction was substantially complete in November 2011.	Completed
Prison Point Rehabilitation Design/CA/RI and Construction	The Prison Point CSO Facility was constructed in 1981. This rehabilitation will include upgrades to the facility including replacement of diesel pump engines, dry weather screen, wet weather screens, sluice gates, chemical tanks, updating of other facility equipment including electrical distribution and chemical disinfection systems, and repair/replacement of miscellaneous equipment as identified in the 2012 Prison Point CSO Planning Report. Improvement/installation of systems as appropriate for energy efficiencies, security, and fire alarm will also be included.	Active

Sub-phase	Scope	Status
Cottage Farm Rehabilitation Design CA/RI and Construction	The Cottage Farm CSO Facility was constructed in 1971. Cottage Farm Rehabilitation to include updating of facility equipment including pumps, sluice gates, gearboxes for coarse screens, electrical distribution and chemical disinfection systems, architectural updating of facility including replacement of roof systems and repair/replacement of miscellaneous equipment and structures as identified in the 2012 Cottage Farm CSO Planning Report. Improvement/installation of systems as appropriate for energy efficiencies, security, and fire alarm will also be included. Also, remediation of PCB containing paint by removal and encapsulation where appropriate in accordance with the PCB abatement plan for Cottage Farm.	Future
Pump Station Rehab Preliminary Design/Study	Preliminary design/study for upgrades at Hayes, Hingham, and the Somerville-Marginal CSO Facility. The project is to follow contract 7162, Pump Station and CSO Condition Assessment, which may result in other facility improvements. Upgrades to the facilities will ensure design output is met. Failure of a particular piece of equipment could lead to failure of another; such as failure of a grinder could negatively impact a pump. Upgraded facilities should result in fewer corrective maintenance calls. This is a system wide project designed to upgrade multiple facilities to ensure worker safety, equipment integrity, environmental protection, and ensure service is not interrupted. Final Design and Construction phases will be added to a future CIP cycle.	Future
System Relief & Contingency Planning Study	This project will investigate what can be done to avoid serious flooding issues. Increased capacity or controlled relief points must be identified in order to address flooding issues that occur during emergency scenarios. Project will be designed to create increased capacity within the collection system in order to decrease SSO discharges. Scope may also include facility specific plans for a failure at MWRA facilities.	Future
Caruso Pump Station Improvements Design, CA/RI (7037), and Construction (7362)	This project will replace the existing standby generator, HVAC system, fire detection/suppression system and security system at the Caruso Pump Station. The standby generator is 25 years old and is a one of a kind of this type of generator. The manufacturer is no longer making spare parts and there is only a limited quantity of available spare parts. The generator is being replaced with a newer model with readily available parts to ensure reliable back-up power and increased to 1,000 kW to provide power for the full design capacity of the station. The HVAC system is in need of improvement as is the fire detection/ suppression system and security system.  Construction contract 7362 was awarded with an NTP dated March 24, 2016. Project substantial completion achieved June 9, 2017.	Completed

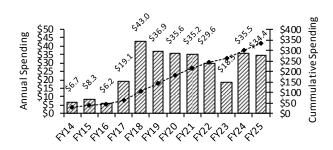

Sub-phase	Scope	Status
Prison Point/Cottage Farm Facilities Diesel Engine Upgrades/Pump and Gearbox Rebuilds ESDC and Construction	Refurbishment of the Prison Point CSO Gearboxes and pumps based on an inspection report performed in May 2010. It is critical during major wet-weather events to have all four pumps operational to provide maximum station capacity and provide redundancy at this critical CSO facility. Also, MWRA non-emergency generator upgrades required by EPA National Emissions Standards for Hazardous Air Pollutants (NESHAP) regulations for Prison Point and Cottage Farm CSO facilities.	Completed
Section 156 Design/Build	Rehabilitation of sewer Section 156 and a portion of adjacent Sections 17 and 19, and associated structures/manholes located between Air Force Road and the Malden River in the City of Everett. The sewer is a 120-year old, 61-inch by 56-inch rounded horseshoe brick sewer, which conveys flows of up to 40 million gallons per day from Wakefield, Stoneham, Woburn, Winchester, and parts of Medford. The sewer is 1,800 feet long of which 125 feet was repaired in 2001. The design/build contract, including Cured-in-Place lining was completed.	Completed
Study and Rehabilitation of Sections 186, 4, 5, and 6 Design CA/RI and Construction	Emergency removal of delaminated plastic liner from Section 186 was performed in June 2011. Rehabilitation projects in 1991 and 1997 lined Sections 4, 5, and 6 with silica/shotcrete covered with epoxy. Project will include a manual inspection to identify rehabilitation needs, feasibility, and scope. Followed by design and construction of rehabilitation/repairs.	Active
Prison Point Piping Rehabilitation	As a recommendation of the Prison Point/Cottage Farm CSO Preliminary Design/Study, this project will repair weak spots, replace pipe saddle supports, and install an erosion/corrosion liner in the discharge piping.	Completed
DeLauri Pump Station Screens & Security	This project replaces the existing catenary bar screens and will install security upgrades. Design was developed in-house with the security improvements reviewed by an outside consultant. The security improvements include motion detectors, door switches, small security items in the main building and emergency generator room. This includes work associated with bringing signals underground into underground conduit to run sensor lines for SCADA. The Construction contract was awarded in January 2018.	Active
Quincy/Hingham Pump Station Fuel Storage Upgrades Construction	Project to improve diesel fuel storage capacity at Quincy and Hingham pump stations. Hingham's underground tank failed and will be replaced with an above ground tank. Quincy tank storage to be increased from 1 day to 5 days of storage with the addition of an above ground tank.	Active
Fuel Oil Tank Replacements at Various Facilities Design CA/RI and Construction	Fuel and tank replacement at all facilities (water and wastewater) to avoid tank failures. Priorities in the following order are (1) single wall tanks in vaults, (2) double wall steel tanks approx. 20 years old, (3) double wall fiberglass tanks over 25 years old, and (4) double wall fiberglass tanks 20-25 years old. Vehicle fuel dispensing systems to be replaced at all vehicle fueling facilities.	Future

Sub-phase	Scope	Status
Wiggins Terminal Pump Station Replacement Design CA/RI and Construction	The Wiggins Terminal Pump Station services a small seasonal flow from Castle Island and Conley Terminal. The Station is in need of rehabilitation and updating of remote operational control. The facility is located within Conley Terminal and requires MassPort security clearance to access.	Active

# S. 146 Inspection of Deer Island Cross Harbor Tunnels

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

Master Plan Project **2** 2008 Priority Rating 2 (see Appendix 3)

To inspect, design, and repair MWRA deep rock tunnels to ensure proper wastewater system operation.

## **Project History and Background**

The MWRA sewer system includes three deep rock tunnels that carry wastewater from the headworks to the DITP. The MWRA currently does not have the technology and capability of inspecting deep rock tunnels.

#### Scope

Sub-phase	Scope	status
Tunnel Inspection and Condition Assessment	The MWRA sewer system includes three deep rock tunnels that carry wastewater from the headworks to the DITP. The MWRA currently does not have the technology and capability of inspecting deep rock tunnels. This subphase includes inspection and condition assessment.

☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

## Master Plan Project ₹ 2009 Priority Rating 3 (see Appendix 3)

To identify system improvements to reduce sanitary sewer overflows that occur at MWRA's Sewer section 628 and Pearl Street siphon.

#### **Project History and Background**

The Randolph Trunk Sewer was constructed in 1958 and consists of three sections: 627, 628 and 628A. Section 628 is a 42-inch diameter reinforced concrete sewer located in Braintree. During extreme wet weather events, Section 628 experiences overflows, particularly at a 50-foot long double-barrel siphon located at Pearl Street next to residential property. A study will be performed to determine the best method of reducing excessive wet weather flows or to provide hydraulic relief to this section of the Randolph Trunk Sewer.

#### Scope

Sub-phase	Scope	Status

## **Explanation of Changes**

• Schedule shifted due to project priorities.

## **CEB Impacts**

## S. 206 Deer Island Treatment Plant Asset Protection

## **Project Purpose and Benefits**

✓ Contributes to improved public health
✓ Fulfills a regulatory requirement
✓ Extends current asset life
✓ Improves system operability and reliability

To protect the investment of MWRA ratepayers in the Deer Island Treatment Plant by ensuring timely replacement of DI's systems, which contain more than 60,000 pieces of equipment with an approximate value of \$1 billion. Based on the Master Plan developed in 2006, most recently updated in 2013, MWRA expects to sequentially replace equipment and structures in the facility as they reach the end of their useful life. Upon completion of the 2018 Master Plan update, additional changes may be incorporated in FY19 for future projects, beyond FY27.

Construction of the Deer Island Treatment Plant was one of the largest wastewater projects ever undertaken in the United States. DITP construction was a 12-year, \$3.8 billion effort (not including the cost of off-island residuals facilities) started in 1988. MWRA commenced primary treatment at the new plant in 1995 and secondary treatment in 1997. With the completion of the Effluent Outfall Tunnel in September 2000, the plant discharges treated effluent 9.5 miles offshore into the Massachusetts Bay through a series of 55 diffusers spaced along the last 1.25 miles of the tunnel.

#### **Project History and Background**

At an expansive and complex facility like the Deer Island Treatment Plant (DITP), unanticipated equipment and system failures have the potential to cause operational and maintenance crises. It is prudent industry practice to take a proactive approach by establishing programs to anticipate when equipment and systems are near the end of their reliable service lives, and then overhaul, upgrade, or replace the equipment, systems, and structures as needed.

DITP staff have implemented a "reliability-centered maintenance" (RCM) program to monitor, evaluate, and maintain all of the pieces of equipment and major systems within the facility. RCM includes using non-invasive methods of assessing the current operational condition of equipment through programs such as vibration monitoring, lubricant and oil sampling/testing, thermography, and ultrasonics (audible sound). These programs involve developing a "base line" for each piece of equipment when it is relatively new or rehabbed, then comparing future test results to determine if there is a change in the base line which warrants invasive action or other maintenance procedures to mitigate the problems. In addition to RCM, staff follows original equipment manufacturer (OEM) maintenance protocols when appropriate. To assist staff in keeping all of the historic data; storing OEM maintenance instructions; monitoring costs associated with maintaining each piece of equipment; and providing work orders as needed, among other tasks - the maintenance software program MAXIMO has been implemented at DITP (and other Authority locations).

To augment the DITP maintenance program as needed, contracts are issued to obtain the services of factory-authorized technicians with the expertise to maintain specialized equipment and systems, such as electricity-generating turbines (hydro, wind, steam and combustion-driven), the oxygen generation facility, Thermal Power Plant equipment, etc. Recommendations to add capital projects to the budget also come from staff managing these maintenance programs and service contracts.

The DITP Asset Protection project encompasses the following major functional categories:

- 1. Equipment Replacement (chains, pumps, motors, control systems, discrete process equipment, etc.).
- 2. Architectural projects (expansion joint replacements, concrete corrosion, etc.).
- 3. Utilities projects (water, sewer, drainage, piping, electrical wiring, heating systems, etc.).

- 4. Support projects (Technical Information Center projects, security projects, etc.).
- 5. Specialty projects (chemical pipelines and storage tanks, fuels storage tanks, etc.).

Sub-phase	Scope	Status
Equipment Replacement:		
Equipment Condition Monitoring	Installation of temperature & vibration-monitoring equipment in NMPS and Winthrop Terminal Facility (WTF). Completed in January 2005.	Completed
CEMS Equipment Replacement	Replaced the data collection computers, upgraded the software, and added PLCs to the Continuous Emissions Monitoring Systems on the two high-pressure Zurn boilers. Completed in March 2006.	Completed
Pump Packing Replacement	Replace pump packing seals with mechanical seals in the North Main, South System, and Winthrop Terminal pump stations. Purchases completed in FY08, installations completed in FY09.	Completed
Cathodic Protection Construction (Design added to the Digester & Storage Tank Rehab project)	Project to evaluate the current system condition, then complete a Design and Construction phase to repair DI's cathodic protection system as needed. Design will be done under Digester & Storage Tank Rehab Design in FY19, construction in FY21-23.	Future
Digester Chiller Replacement	Replaced the refrigeration-based digester gas chiller with a chilled water system that performs better at low operational loads. Completed in May 2006.	Completed
Dystor Tank Membrane Replacement	Emergency replacement of a torn gas membrane on one digester storage tank, and preventive replacement on the second.  Completed both by October 2005.	Completed
Dystor Membrane Replacements	Periodic future replacement of the two gas & sludge storage tank membranes in the digester complex; added in FY08 per the 2006 Master Plan. Replaced both membranes in 2005, anticipated to be required every 12-15 years. Following a condition assessment in October 2015, the next phase is scheduled for FY20.	Future
Digested Sludge Pump Replacement Design & Construction (Phase 1)	The three positive displacement Abel pumps caused pipe vibration and required extensive maintenance. Centrifugal pumps with higher flow rates were installed to minimize grit settlement in the pipes. The first phase was completed in September 2011, one centrifugal pump and a flushing pump were installed. These pumps were tested to ensure they worked well before the three remaining pumps were replaced. See Phase 2 below.	Completed
Digested Sludge Pump Replacement (Phase 2)	Sub-phase added in FY14, to complete replacement of the Abel pumps. Awarded in November 2015, completed by July 2017.	Completed
Centrifuge Back-drive Replacements	Replaced the centrifuge back-drives, which had become obsolete. Completed in March 2015.	Completed
Grit & East/West Odor Ctrl Air Handler Unit (AHU) Replacements	Replace deteriorated air handlers. Replacements in FY09-16, then every 15 years. Grit AHU replacement completed in June 2010. The E/W Odor Control AHU Replacements are now in the HVAC Equipment Replacement project, below.	Completed

Sub-phase	Scope	Status
Equipment Replacement:		
Fire Alarm System Replacement – Design & Construction and REI	Added in FY08 from the 2006 Master Plan. To replace obsolete fire alarm monitoring & control systems. Design was awarded in October 2015; replace in FY19-22 and approximately every 20 years thereafter.	Active
Bidirectional Radio Repeater System Upgrade	Install a bidirectional radio amplification system in DITP galleries to ensure emergency radio communications can be sent and received to meet current safety code. Anticipate award in FY18.	Future
HVAC Equipment Replacement – Design/ESDC, Construction and REI	Added in FY08 from the 2006 Master Plan. Replace two obsolete HVAC control systems with one manufacturer's system, reducing replacement parts and improving automation. Design began in FY14; replace in FY18-21 and then every 15 years. Includes central lab fume hoods and East/West Odor Control Air Handler replacements.	Active
Centrifuge Replacements – Design & Construction	Replace the sludge centrifuges when the scrolls/bowls are too worn to repair, or after catastrophic failure. Units have a 20 to 30 year life but were exposed to a lot of grit after start-up in 1996. Added in FY08 from the 2006 Master Plan; begin design in FY22, construction in FY24. Centrifuges thicken secondary waste sludge before it goes to the digesters.	Future
Cryogenics Plant Equipment Replacement – Design & Construction	Design and construction to replace pumps, valves, motors, sensors, switches, programmable controllers and other obsolete equipment as needed. Added in FY08 from the 2006 Master Plan. Replacement of 3 chillers was given a separate sub-phase for FY13; see below. Remaining plant overhaul work to commence in FY21-26 with future rehab and upgrade work occurring every 15 years. An annual maintenance contract has kept this facility in good operating condition, since it is critical to secondary treatment.	Future
Cryogenics Chillers Replacement	Replaced failing air chillers that required frequent maintenance in the oxygen generation plant. Construction completed in September 2016.	Completed
Digester Modules 1 & 2 Pipe Replacement Design & Construction	During digester pipe cleaning in 2007, deterioration of the glass lining was noted. This project was added in FY08, although not in the 2006 Master Plan, and was completed by August 2014. Scope also included plug valve replacements. A new project to complete additional digester storage tank rehab work was given its own subphase in FY13; see the DITP Digester & Storage Tank Rehab project under "Specialties".	Completed
Butterfly Valve Replacements, North Main Pump Station (NMPS) & Winthrop Terminal Facility (WTF)	There are twenty 60-inch butterfly valves in NMPS and eight 36-inch plug valves in WTF, for isolating the pumps when maintenance is required. One valve in NMPS was replaced; the removed valve's condition was too poor to rebuild. Several others began to leak, indicating that the gaskets and seals were failing. Scope revisions in FY10 added replacement of the magnetic flow meters; scope also included replacement of PSL piping and Eight (8) hydraulic actuators for the SSPS pump check valves. Work began in June 2014 and was completed in September 2017.	Completed

Sub-phase	Scope	Status
Equipment Replacement:		
Gas Protection Systems Replacement	Replace gas detection devices in 13 different DITP locations: pump stations (NMPS, SSPS, WTF), odor control (East/West, Residuals, Winthrop Terminal) and process areas (Thermal Power Plant, Digesters, gas handling, primary & secondary galleries, disinfection, Grit Facility, and gravity thickeners). These detectors measure levels of oxygen, hydrogen sulfide, sulfur dioxide, chlorine, and other combustible gases. They are integral to ensuring the health & safety of employees and contractors. Scheduled to begin in FY18 in two phases; reach substantial completion in FY20.	Future

Sub-phase	Scope	Status
Architectural:		
Expansion Joint Repairs	The program to periodically replace failed expansion joints in the concrete clarifier decks and/or various retaining walls. The first phase was completed in November 2003; phase 2 was completed in November 2013, phase 3 is scheduled for FY18-20.	Future
Eastern Seawall Design/ESDC/REI & Construction	Design and construction of repairs to the base of the eastern seawall due to tidal damage, exposing rebar. Wall condition is assessed annually. Design to commence in FY18, construction work scheduled for FY21-23.	Future
Roof Replacement Phase 1	Added to the CIP in FY10, based on decision to capitalize these costs. Replaced the rubber membrane roof on the Winthrop Terminal, the Administration/Warehouse building, the Cryogenics Facility, and the lower roofs on the Digester Modules. Completed March 2010.	Completed
DITP Roof Replacements Phase 2	Added in FY10, to replace roof membranes at the North & South Main Pump Stations; East & West Odor Control; the Grit Facility; and the Centrifuge Thickener building. Completed July 2011.	Completed
Personnel Dock Rehabilitation	Rehabilitate the floating docks at Deer Island. Contract will improve the safety, appearance, and reliability of the floating docks. Awarded in FY17, completed in mid-FY18.	Active
Barge Berth and Facility Replacement Design/ESDC and Construction	Major rehabs of the barge berth & pier facilities due to damage and/or normal wear. Added per the Master Plan. Barge berth/facility work in FY22-26, then on a 20-year repeat cycle.	Future
Rip-rap Material	Purchased 6,400 tons of rip-rap to reduce and prevent ocean wave soil erosion along the northeast and eastern shoreline at Deer Island. Placement completed by staff in June 2017.	Completed
DITP Roof Replacement Phase 3	New roofing was needed at the Grit Facility, North Main Pump Station, Main Switchgear Building, and the gravity thickeners in order to protect the equipment in these buildings. Completed in July 2014.	Completed

Sub-phase	Scope	Status
Utilities:		
Outfall Modifications	Inspection of the old outfall tunnels (decommissioned after startup of the new outfall tunnel). Inspection completed in July 2002.	Completed
Electrical Equipment Upgrades (EEU) including future cycles from the Master Plan	Replace substation components and bus ducts. Bus duct 2 &22 replacement completed October 2001, and EEU - 2 completed by March 2007. EEU-3 completed by August 2011. EEU-4 completed by June 2016; EEU -5 design is scheduled to start in FY22, and EEU-6 is scheduled to start in FY25.	Future
VFD Replacements, including Secondary Reactor VFDs	Replace obsolete variable frequency drives (VFDs) in the North Main Pump Station (in FY12-16); South System Pump Station (done in FY07-08), with the next cycle to start in FY19 (and the South System Pump Station Lube System Replacement was added to the scope in the Proposed FY19 CIP; Winthrop Terminal Facility (FY16-20); and miscellaneous smaller VFDs throughout the plant (ongoing). Future replacements every 12-15 years. In FY14 the scope was revised to include the addition of VFDs to the secondary oxygen reactor batteries A, B and C, to improve system efficiency and reduce energy consumption. Completed by August 2016.	Future
Power System Improvement Design & Constr. (Contracts 7061, 7061A, 7061B, 7061C, 7061D)	For modifications to DITP's electrical system as recommended in the consultant report after an FY04 power outage. Design completed in FY09-11. Completing the construction in a series of projects in FY09-14; added 7061C, dump condenser replacement and 7061D for NMPS fuel tank removal in FY11. Two awarded in FY09, two in FY11. The last, 7061A, Thermal Power Plant Fuel System Upgrade was substantially completed by May 2017.	Completed
TPP Boiler Control Replacement	Replaced boiler controls in the Thermal Power Plant that were obsolete. Completed by November 2016.	Completed
Switchgear Replacements including future cycles added per the Master Plan	On-going program to replace obsolete electrical switchgear. Several buildings scheduled for FY19-22, others in FY23-25. Future cycles beyond that time are not currently funded.	Future
Transformer Replacements	Approximately 42 electrical substations and 87 transformers have been in service since DITP start-up. Sub-phase eliminated in FY14; replacements are now done in Electrical Equipment Upgrades.	Completed
PICS Replacement including future cycles from the Master Plan	Replacement or upgrade of components of the Process Information Control System (PICS) including keypads, consoles, and software due to obsolescence. Completed in FY16; may need to be repeated every 10-12 years.	Completed
PICS Fiber Loop Replacement	Replace the system "backbone", the 26 fiber optic loop, scheduled for FY22-24.	Future
Chemical Bulk Storage Relining Design, REI and Construction	Stripping and relining three of the four Sodium Hypochlorite Tanks and the two Sodium Bisulfite tanks, which are in fair condition on the outside (shows staining, rusting, and corrosion). If one bisulfite tank fails there is no longer any back-up. Scheduled to start in FY18; by then, the tanks will have been in service for 23 years.	Future
Chemical Pipe Replacement Design and Construction	Planned periodic replacement of the various chemical pipelines in the odor control and disinfection facilities due to deterioration from corrosion. Scheduled for FY22-25.	Future

Sub-phase Utilities:	Scope	Status
Heat Loop Pipe Replacement Construction	Rerouting heat loop piping into galleries to reduce underground corrosion and improve accessibility. Phase 1 completed in Dec. 2005, Phase 2 completed in February 2008. Phase 3 completed in June 2011. Includes periodic valve replacements. Another project phase needs to be added to provide redundancy to the heat loop.	Completed
Fuel Pipe Abandonment	Cleaned and cemented the existing fuel pipeline in place instead of removing it. Completed December 2012.	Completed
North Main Pump Station Motor Control Center (MCC) Construction	Sequential replacement of the MCC equipment that has become obsolete and unreliable. Designed under As-Needed Design task order, construction completed in two sequential phases in FY12-13. See Phase 2 below.	Completed
Motor Control Center (MCC) and Switchgear Replacement Design ESDC/REI and Construction	New sub-phase, pulled from the project above. Second phase of the work, being done in FY17-22. In FY17, the design scope was revised to include replacement of switchgear in the Admin/Lab building. Construction is scheduled to begin in FY19.	Active
Combustion Turbine Generator (CTG) Rebuilds	Rebuilds of the combustion turbines in the Thermal Power Plant. Added from the Master Plan, scheduled for FY23-25 with repeat cycles every 15 years. With the addition of the "Combined Heat & Power" facility, this work may eventually be eliminated.	Future
STG System Modifications Design & Construction	Added equipment to the steam turbine generator to produce additional electricity utilizing the current steam production more efficiently. Helps the MWRA meet energy goals set out by executive order. Completed in February 2011. Added Pressure Reducing Valve (PRV) to maximize electrical generation, completed July 2014.	Completed
DI Digester Flare No. 4 Design and Construction	Install a fourth gas flare to reduce the potential for air permit violations when an existing flare is out of service and the boilers have to be taken off-line. Construction currently scheduled for FY24-25.	Future
Hydroturbine Replacements Design and Construction	There are two 1.1 megawatt hydroturbine generators (HTGs) at Deer Island. Electricity is generated using the gravitational force of plant effluent as it drops down the outfall shaft from the disinfection basins into the intake channel beneath each HTG by opening computer-operated wicket gates. This facility came on line in July 2001. The equipment has reached the end of its useful life, and repairs are costly. Currently scheduled to begin design in FY19, construction in FY21.	Future

Sub-phase	Scope	Status
Support:		
DISC Application	Hardware, software, and contract services to implement a DITP plant-wide computerized database of all plant systems (electrical, gas, water, etc). Current systems deemed sufficient, remaining project removed in FY14.	Completed
Document Format Conversion	Conversion of DITP construction documents into electronic format and completion of document-reference database. This work is in process, and has several phases. Expect completion by the end of FY20.	Active
As-Needed Design Phases 5, 6, 7, and 8	On-going technical design services and/or construction support to supplement existing engineering resources for specialized or complex engineering issues. Initially, the contracts were issued in tandem and ran for two years each. Starting with Phase 6, the contract length was extended to three years each. Phases 6-1 and 6-2 ended by October 2012, followed by phases 7-1, 7-2, and 7-3 (awarded in FY13, at \$1.6M each over three years). Phases 8-1, 8-2, and 8-3 were awarded in FY16 at \$1.6M each, over three years.	Active
Deer Island As-Needed Technical Design	A placeholder used to continue the technical design services and/or construction support in the same fashion as the contracts listed above. Each series of new contracts will be deducted from this placeholder and given their own subphase numbers. Currently funded through FY26. In FY19, cost estimates for each 3-year contract were increased, funding now runs from FY20 through FY29 (previously only funded through FY26).	Future

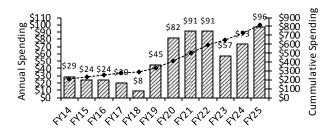

Sub-phase Specialties:	Scope	Status
Sodium Hypochlorite Tank Liner Removal	Removed the failed lining in tank #1 of the four sodium hypochlorite storage tanks. Completed in September 2006.	Completed
Hypochlorite Tanks 1&3 Reline	Renamed the "Sodium Hypo Tank Repair 1" subphase in FY08. Included the stripping, repair and relining of tank 3. Completed in November 2007.	Completed
Hypochlorite Tanks 2 & 4 Reline	Added in FY08 from the 2006 Master Plan. Strip & reline the two remaining sodium hypochlorite storage tanks. Scope included removing ladders and replacing safety railings on the tanks. Completed in October 2008.	Completed
Sodium Hypochlorite Tank Rehabilitation or Replacement	Based on condition, expect to start replacing one tank per year beginning in FY23.	Future
Primary & Secondary Clarifier Rehab – Design (ESDC/REI)	Consultant to provide ESDC/REI services during the Primary & Secondary Clarifier rehab work described below (design done by As-Needed Design consultant). Scope expanded to include secondary clarifiers due to deterioration in the longitudinal chains and scum collection systems. Completed by September 2013.	Completed

Sub-phase	Scope	Status
Specialties:		
Primary & Secondary Clarifier Rehab Construction	Replace longitudinal and cross collector chains and sprockets, chain drives, wear shoes; modify tip tubes, replace hose bibs; repair wall expansion joints, add more drop boxes, etc. Added the secondary clarifiers to the scope for FY09 and specified a higher-grade stainless steel, which increased the project cost by \$30M. Separated out the gravity thickener scope due to the need for separate, distinct schedules. Project awarded at \$59.4M; completed in February 2012.	Completed
Gravity Thickener Rehabilitation - Design	Designing gravity thickener improvements, as discussed further below. Project staff determined that a separate design phase is not needed, dropped this subphase in FY14.	Completed
Gravity Thickener Improvements - Construction	This subphase was eliminated in FY08, and the scope was included with the Primary Clarifier Rehab work above. Made a stand-alone project again in FY09. Multiple phases needed - the first phase (6966) involved replacing some fiberglass covers in FY10-12. 6966A, B, and C were added for emergency repairs to center columns in three tanks in FY11. Project completed in June 2012.	Completed
Gravity Thickener Rehabilitation	Sub-phase pulled from the project above. This phase involves installing catwalks around the perimeter of several tanks, removing concrete blocks in the effluent channels, and modifying the sludge thickener roofing to improve staff access and the operating efficiency beginning in FY18.	Future
Gravity Thickener Center Column Replacement	Complete replacement of the center columns in all 4 tanks with a higher grade steel, due to the failures experienced in FY11.  Contract awarded in FY13, completed by January 2014.	Completed
Odor Control Rehabilitation Study, Design/ESDC, Construction and REI	Dropped the Preliminary Design phase and added ESDC/REI to the scope in FY11. The project involves modifications to the plant-wide odor control systems, including the digester gas systems and wet scrubber improvements. Design begins in FY21, construction currently scheduled for FY24-27.	Future
Clarifier W3H Flushing System	Replaced deteriorated water flushing lines in the clarifier batteries, completed July 2013.	Completed
Clarifier Rehabilitation Phase 2 Design/ESDC, REI and Construction	Project to correct deficiencies noted during the first Primary & Secondary Clarifier project. Influent gates not sealing off tanks adequately; effluent launders and aeration systems need repair; and concrete corrosion in primary clarifiers above the water line needs repair and coating to prevent future corrosion. The sludge removal system in primary tanks and aeration/recirculation systems in secondary tanks need to be rehabilitated as well. Design/ESDC contract began in FY15, and construction is currently scheduled for FY19-22.	Active
Scum Skimmer (Clarifier Tip Tube) Replacement	Sub-phase pulled from the W3H flushing project above. Needed a separate project for replacing the scum tip tubes. Scum tip tubes not working results in scum build-up in clarifiers that has to be manually collected and transported to the gravity thickeners. Completed in FY17; secondary tip tubes replacement was added to the scope, increasing the cost.	Completed

Sub-phase	Scope	Status
Specialties:		
Digester and Storage Tank Design/ESDC/REI and Rehabilitation Phase 2	The DITP residuals facility includes three digester modules and two gas handling/ sludge storage tanks. During the Digester Mods Pipe Replacement contract (7055), it was noted that other digester equipment needs replacement. Plugged digester recirculation pipes, mixer failures, and overflow box deterioration resulted in increasing the scope of work needed to correct all deficiencies in this area. Some steel plates in the digesters are also expected to need repair or replacement and the interior of the digesters needs to be coated. Begin design in FY19, construction and REI scheduled in FY22.	Future
Combined Heat & Power (CHP) Study, Design and Construction	A brief system review was done to determine possible options for optimizing the use of methane gas produced from the existing sludge processing system. One option is to construct a CHP facility containing more efficient gas-fired turbines to increase electrical self-generation, and ensure beneficial re-use of all methane gas in summer months while still meeting all plant heat requirements. The CHP facility would be designed to handle the increased methane gas produced by co-digestion, if that project moves forward. Depending on the CHP facility design, portions of the 17-year old Thermal Power Plant will be modified or eliminated. A detailed energy alternatives project is slated to begin in FY18, followed by design in FY21 and construction in FY23.	Future
Co-Digestion Design/ESDC/REI and Construction	Due to uncertainty in the ability to barge food waste to DITP, the pilot program has been dropped. Co-digestion construction is for the addition of piping and a receiving tank for the liquid food waste to be delivered to Deer Island. It is expected that food waste will be barged to the treatment plant, pumped into the receiving tank, and then fed through the piping into the digesters. Since this option is not currently economically feasible, the schedule has been pushed out to FY24-25.	Future
Co-Digestion Temporary Facility	Moved this sub-phase from the Residuals CIP to DITP in FY16. The budget was reduced to actual costs incurred since this project is not likely to be continued.	Completed

Total Budget	Payments thru FY17	Remaining Balance	9		FY19	FY19-23	Beyond FY23	
961,241	\$244,876	\$716,365	\$8,424	\$105,800	\$44,880	\$365,604	\$342,336	

## **DI Asset Protection**

Project		Status as % is approximation based on project budget and expenditures. Several
Status	25.9%	previously completed phases for this project are included in the Completed Project
12/17		list. Additional contracts recently completed include: As-Needed Design Phases 7-1,
12/17		7-2, and 7-3; NMPS VFD Replacement Construction, Electrical Upgrade Construction
		4, Scum Skimmer Replacement, Cryo Chillers Replacement, Secondary Reactor
		Batteries VFD Installation, Thermal Power Plant Boiler Control Replacement, Thermal
		Plant Fuel System Modifications, Digester Sludge Pump Phase 2 and Personnel Dock
		Rehab. Contracts in process include the following: As-Needed Design Phase 8-1, 8-2,
		and 8-3; NMPS and WTF Valve & Piping Replacement, Clarifier Phase 2 Design, HVAC
		Equipment Replacement Design, Fire Alarm System Replacement Design, DITP MCC &
		Switchgear Replacement Design, and WTF VFD Replacement. Clarifier Rehabilitation
		Phase 2, HVAC Equipment Replacement Construction, Eastern Seawall Design, Misc.
		VFD Replacements, Energy Supply Alternatives Analysis, Gravity Thickener
		Rehabilitation, Expansion Joint Repair Phase 3, Gas Protection System Replacement,
		Bidirectional Radio Repeater Upgrade, SSPS VFD Replacement Design, and Bulk
		Chemical Storage Tanks Relining are expected to start in FY18.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Sched	Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.	
\$859,105	\$961,241	\$102,136	Jun-48	Jun-48	None	\$383,991	\$365,604	(\$18,387)	

## **Explanation of Changes**

 Project cost change primarily due to updated cost estimates for Clarifier Rehab Phase 2 Construction, Electrical Equipment Upgrade 6, Sodium Hypo Tank Replacement, Cryogenics Plant Equipment Replacement Design and Construction, NMPS VFD Replacement Construction, DI As-Needed Technical Design, SSPS VFD Replacement Construction, Digester/Storage Tank Design and REI, Gravity Thickener Rehab, DI Dystor Membrane Replacements. Also, new projects for Hydroturbine Replacements Design/ESDC/REI and Construction and Bidirectional Radio Repeater System Upgrades as well as inflation adjustments on unawarded contracts.

Spending change primarily due to updated Notice-to-Proceed and Substantial Completion dates for several
contracts including Combined Heat & Power Construction, DI Centrifuge Replacements Construction, DI
Switchgear Replacements Design and Construction, Barge Berth Rehabilitation Construction, DI CTG Rebuilds,
Electrical Equipment Upgrades 6 Construction, Digester Gas Flare #4 Construction, Centrifuge Replacement
Design/ESDC/REI and Construction, Chemical Pipe Replacement Construction, and updated cost estimates
listed above.

#### **CEB Impacts**

- The majority of the projects are required to replace obsolete equipment and systems. Some of the projects are expected to result in decreased maintenance and/or operating costs such as the HVAC equipment replacement. However, the potential benefits from most of the projects are not quantified at this time.
- Benefits of several energy-related projects have been estimated resulting in anticipated annual electrical savings. Some examples include: Winthrop Terminal Facility VFD Replacement (\$30,000 in FY21), HVAC Equipment Replacement \$200,000 in lab equipment in FY20, (\$140,000 in FY23 and \$50,000/yr in FY24-25), and Future SSPS VFD Replacements (\$120,000 beginning in FY23), and Hydroturbine Replacements (\$100,000 in FY23). Any potential impacts of co-digestion and the combined heat and power facility have not yet been quantified or included in the planning estimates due to uncertainty regarding the scope and feasibility of the projects.
- Projects that are expected to reduce maintenance time and other resources are the Gravity Thickener Rehabilitation, Cryogenic Plant Chiller Replacements, Thickened Primary Sludge Pump Replacements and Digested Sludge Pump Replacements.

# S. 210 Clinton Wastewater Treatment Plant

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Extends current asset life
 ☑ Improves system operability and reliability

## **Project History and Background**

The Clinton Wastewater Treatment Plant Rehabilitation was completed in 1992. The plant is generally in good condition. Some equipment rehabilitation and replacement projects were recommended in past CIP cycles. Operability of mechanical equipment and maintenance of electric/standby power systems are key elements to minimizing the risk of component failure. Any malfunction of mechanical equipment may impact wastewater treatment, particularly during large storm events that stress the hydraulic capacity of the facility. Key decision making to minimize risks includes the cost/benefit of when to replace aging equipment and which/how many spare parts to pre-purchase. Other uncertainties include technology upgrades to meet future regulatory requirements. Clinton WWTP was previously included in DITP's "Asset Protection – Specialties" program category, but was given its own distinct CIP program in FY08.

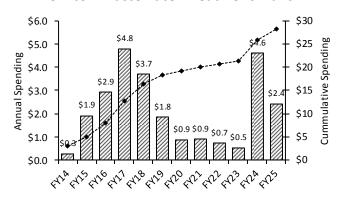

#### Scope

Sub-phase	Sub-phase Scope			
Clinton Soda Ash Replacement	The soda ash delivery system required for pH control in the activated sludge process was obsolete and needed to be replaced. Awarded in November 2007, work was complete by August 2008.	Completed		
Clinton Permanent Standby Generator	Install a permanent standby generator at the Clinton Wastewater Treatment Plant. Completed in November 2007.	Completed		
Clinton Digester Cleaning & Rehabs (and Influent Gates)	Clinton's two digesters were approximately 20% filled with compacted grit which was limiting their efficiency. A new discharge permit includes phosphorus limits requiring both digesters to be used at all times. The digester tanks needed to be emptied, cleaned, and rehabilitated to operate effectively under the new permit. The first digester was cleaned by July 2010. In FY12, the scope expanded to include installing two new 36-inch influent gates to control flow from Clinton and Lancaster to prevent flooding and protect plant assets. In FY14, the project scope also included plant-wide concrete repairs because rebar was exposed in walls, walkways and structural support beams across the primary clarifiers. The project involved repairing the walls and replacing the walkways and equipment support beams across the tops of the tanks. Construction began in late FY14 and was completed in FY16; the warranty period extended into FY17.	Completed		

Sub-phase	Scope	Status
Clinton Aeration Efficiency Improvement (and Auxiliary Pumps)	A study completed by FS&T recommended replacing mechanical mixers with fine bubble diffusers in three of the six secondary aeration tanks to improve the oxygen transfer rate and reduce electricity consumption. In FY12, the scope was expanded to include installation of four permanent submersible auxiliary pumps to increase pumping capacity during high flow conditions. This will avoid the cost of renting additional pumps, which was required four times in the past two years. Work began in late FY12 and was completed by February 2013.	Completed
Phosphorus Reduction Design/ESDC and Construction	The new NPDES permit requires compliance with lower phosphorus limits by April 2019 (18 months after the scheduled construction completion and start-up date of December 2017). The new process equipment will achieve the new limit. Design began in early FY14, construction began in FY16; and will be completed by December 2017. The warranty period under the design phase now extends to March 2019.	Active
Clinton Roofing Rehabilitation	Added in FY14. Rehabilitate the tar and gravel roofing on the Administrative Building, Chemical Building, Headworks, Digester building, and the Dewatering and Maintenance Shop. To begin in FY18.	Future
Clinton Facilities Rehabilitation Design/ESDC/REI and Construction	Added in FY14. Rehabilitate or replace the grit removal facilities, two belt filter presses, and close Cell #1 of the landfill. To begin in FY23.	Future
NGRID Gas Line	Agreement with NGrid to construct a natural gas pipeline to convert the plant from using oil to natural gas.	Completed
Valve and Screw Pumps Replacement	There are fifty 4-inch to 8-inch return aerated sludge valves that need replacing, and six 48-inch screw pumps at the end of their useful lives (25 years old). This project involves replacing the valves and installing 6 MGD submersible pumps in place of the six screw pumps. Design by As-Needed Consultant. To begin construction replacing valves and one screw pump in FY18. Broken out into 2 phases in the Proposed FY19 CIP, the second series of screw pump replacements to occur in FY20 to FY24.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$28,354	\$12,415	\$15,939	\$3,693	\$13,583	\$1,841	\$4,845	7,401

## **Clinton Wastewater Treatment Plant**

Project		Status as % is approximation based on project budget and expenditures. Phosphorus
Status	49.5%	Reduction Construction will be complete in December 2017; design warranty period
12/17		runs until March 2019 per Amendment 4. Digester Rehabilitation was completed in
		April 2016. The Clinton Roofing Rehab work and the Valves & Screw Pumps
		Replacement projects will commence in FY18.

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Sched	Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.	
\$23,494	\$28,354	\$4,860	Mar-22	Mar-25	36 mos.	\$7,903	\$4,845	(\$3,058)	

#### **Explanation of Changes**

- Project cost change due to updated cost estimate for Valve and Screw Pumps Replacements and change orders and amendments for Phosphorus Reduction.
- Schedule and spending changed due to updated schedule for Clinton Wastewater Treatment Plant Rehabilitation contracts and restructuring and rescheduling Valve and Screw Pumps Replacements into two contracts.
- Spending change due to updated schedule and cost estimate for Valves and Screw Pumps Replacement, Clinton Roof Rehabilitation, and updated cashflow for Phosphorus Reduction Design/ESDC contract.

#### **CEB Impacts**

The projects are required to replace obsolete equipment and systems. The aeration efficiency project resulted
in decreased electricity usage at Clinton. The concrete repair and digester rehab work may result in decreased
maintenance and/or operating costs although the potential benefits have not been quantified at this time.
The phosphorus reduction project CEB costs for utilities and chemicals are included in the FY18 CEB.

# S. 271 Residuals Asset Protection

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

Master Plan Project **2008** Priority Rating 1 (see Appendix 3)

To protect the investment of MWRA ratepayers by ensuring timely replacement of equipment and systems. MWRA expects to replace equipment and structures in the facility as they reach the end of their useful life.

#### **Project History and Background**

The Residuals Asset Protection program was created in FY08 as part of the Master Plan. The program consists of the anticipated contracts for maintaining and improving the operations and infrastructure of the biosolids processing plant in the long term. MWRA's Biosolids Processing Facility (aka the "pellet plant") was built in 1991 and expanded in 2001. By 2018, most of the major pieces of processing equipment will be 29 years old. The facility is currently in good condition, but some reinvestment is planned in the FY18-22 timeframe, as discussed in more detail below. For this facility, operability of mechanical equipment and maintenance of electric/standby power systems are key elements to minimizing the risk of component failure. Key decisions to minimize risk hinge on the results from cost/benefit analyses, to determine when to replace equipment. The residuals pelletizing process is also currently energy-intensive; future uncertainties include long-term energy costs and supply.

Under the terms of the contract for operation of the biosolids processing facility, New England Fertilizer Company (NEFCO) was responsible for all facility operation and maintenance including any necessary capital improvements until December 2015. They were obligated to turn the facility back over to the MWRA in an operable condition. The Asset Protection phase is intended to provide a dual-track planning approach addressing: (1) the existing facility capital improvement needs beyond the year 2015, if the Authority continues with pelletization, and (2) the option of assessing alternative technologies prior to the current contract expiration date; which culminated in a decision point in FY15.

A comprehensive Residuals Condition Assessment/Reliability Study begun in May 2009 was completed in July 2010. The study found the facility to generally be in good condition with only a few recommendations for improvement. A study to assess the latest technology and regulatory trends planned as a second phase started in FY13 and finished in FY14. The study was intended to narrow the list of viable options for the Authority to consider for long-term implementation. The study examined the feasibility of co-digestion which involves digestion of food wastes and/or fats, oils, and greases (in the digesters at Deer Island Treatment Plant (DITP) and Clinton Wastewater Treatment Plant) to generate additional methane, and determine if there are any changes in the sludge characteristics that may impact the pellet plant. This study also reviewed the adequacy of existing facility components and processes, to provide replacement recommendations based upon the latest existing or alternative technologies. Information developed by these projects will be used by MWRA to produce a prioritized list of recommended design and construction projects that will be scheduled over a 10-year period (FY19-28). Scheduling of upgrade projects will be based on equipment failure risk, construction sequencing to maintain facility operations, and capital expenditure planning.

The Technology and Regulatory Review study provided several major recommendations to the Authority. First, the study found co-digestion to be feasible and potentially beneficial and therefore recommended that the Authority proceeds with projects needed to further evaluate the benefits of that process. As a result, several projects were

added to the DITP CIP to achieve that goal. Throughout 2016, efforts were made to determine the best means to transport food waste to DITP. It was determined that barging food waste was the primary acceptable option, but the collection, transport, and delivery via barge was not economically feasible at this time, so co-digestion is currently on hold until the market becomes more developed and associated costs can be more accurately predicted.

Secondly, it was determined that the Authority should continue with pelletization and pursue a five-year extension to the NEFCO contract. Third, it was recommended that larger sludge dryers be installed for increased pelletization capacity at a lower energy cost per ton of sludge processed (further cost-benefit analysis is needed before proceeding). Funding for this element of the project (and other capital expenditures) were also to be points of negotiation with NEFCO.

After considering these recommendations, Authority staff decided to continue with pelletization and negotiated a five-year extension to the pellet plant operations contract with NEFCO. On March 11, 2015 the Board of Directors approved Amendment 1 to contract S345 with NEFCO, which extends the end date to December 31, 2020 and includes a \$7 million capital budget funding commitment by the Authority for potential capital projects identified as being necessary over the next five years. Any projects deemed necessary will be separately bid by the MWRA, and awarded subject to Board approval. This extension will be followed by another long-term competitive procurement. The additional time in this extension allows for planning and implementation of co-digestion of food waste at DITP if it proves feasible; further evaluation of the efficiency of larger dryer trains recently installed at two other facilities; a potential increase in competition over the next five years; and the opportunity for the Authority to better define the operating parameters for the next long-term competitive bid.

For the residuals biosolids processing facility, proposed spending of \$180.3 million on eighteen projects was identified in the 40-year master plan timeframe of FY07 through FY48. The projects identified were merely placeholders in recognition that some capital improvements will likely be required at DITP and/or the pellet plant. Fifteen projects (equaling \$148.6M) out of the eighteen were included in the FY08 CIP. The other three (addressing the rehabilitation of the polymer system, building envelope, and thermal oxidizers) have a priority rating of 3, and therefore are not yet included in the CIP.

In the FY14 Proposed CIP cycle, the conceptual plan for future design and construction projects was modified; the overall project cost estimate was reduced to \$103.83 million and fewer sub-phases included funding to cover the potential construction projects since the plan for the future would not be fully developed until after the technology study mentioned above was completed and the findings evaluated, which has been done. See the 'scope' sections below for information regarding which sub-phases are funded; the zero-funded "placeholders" are no longer shown.

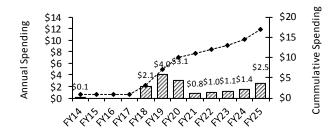

#### Scope

Sub-phase	Scope	Status
Condition Assessment/ Reliability Study	Evaluate the condition of the entire facility at the mid-point of the current contract and then assess other residuals processing options and regulatory changes which may provide cost-saving opportunities. First phase work (present condition assessment) began in May 2009 and finished in July 2010. Work on implementing any short-term recommendations from this phase began in FY11. The 2 <sup>nd</sup> phase, Technology & Regulatory review began in FY13 and finished in January 2014; recommendations were as discussed above.	Completed

Sub-phase	Scope	Status
Residuals Plant Facility Plan/EIR	The design and construction of improvements to the plant utilities infrastructure (electric, water, sanitary, and drainage) may be necessary. This CIP project will address issues and/or recommendations identified during the initial study.	Future
Residuals Plant Upgrades – Phase 1 Design & Construction (includes initial phases to repaint sludge storage tanks and silos; mechanical and electrical improvements as part of the \$7M commitment to NEFCo)	The \$7M construction project included in the NEFCo agreement is under Construction Phase 1, as part of the 5-year NEFCo extension. Funding of \$5.4M is allocated in the Proposed FY19 CIP to begin the first 3 projects identified to date (repainting the sludge storage tanks and pellet storage silos; mechanical improvements; and electrical improvements) as agreed to by MWRA and NEFCO. The remaining \$1.59M for other planned construction projects is allocated to FY19- 20. The \$2M Design phase is rescheduled to FY21, to begin designs needed after the current contract extension ends. This will be coupled with the Phase 2 Design and Construction projects.	Active and Future
Residuals Phase 2 Design and Construction	For selection of a consultant to design and oversee implementation of a second round of equipment replacements funded at \$15M for design/ESDC and \$75M for various unspecified construction phases. Following approval of the five year extension with NEFCO, phase 2 design work has been moved out to begin in FY22; first construction project in FY23.	Future
Residuals Pellet Conveyance Piping Relocation	Build a separate support system to relocate the pipes (that convey pellets to the "high silo system") that are currently attached to the wall of a building that the MWRA does not own. This project is to build a separate pipe support system and relocate these pipes, starting in FY18.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## Changes to Project Scope, Budget, and Schedule

Project Cost			Project Cost Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$103,832	\$103,832	\$0	Jun-48	Jun-48	None	\$13,565	\$9,987	(\$3,578)

## **Explanation of Changes**

• Spending changed primarily due to updated schedules for Residuals Upgrades, Phase 1 and Phase 2 Design and Construction contracts.

## **CEB Impacts**

• The majority of the projects are required to replace obsolete equipment and systems. Some of the projects are expected to result in decreased maintenance and/or operating costs, however the potential benefits are not quantified at this time.

# Introduction to Combined Sewer Overflow (CSO) Program

In 1987, MWRA entered a stipulation in the Federal District Court Order in the Boston Harbor Case ("First Stipulation") by which it accepted responsibility for developing and implementing a long-term CSO control plan for all combined sewer overflows hydraulically connected to MWRA's system, including the outfalls owned and operated by the communities of Boston (BWSC), Cambridge, Chelsea and Somerville (the "CSO communities"). In response to the First Stipulation, MWRA conducted site-specific and watershed based planning both to meet short-term CSO control requirements pursuant to federal regulations, including EPA Nine Minimum Controls ("NMC"), and to develop a long-term control plan to bring Boston area CSOs into compliance with the Federal Clean Water Act and Massachusetts Surface Water Quality Standards. MWRA developed these plans in conformance with federal and state CSO policies and associated guidance documents, which evolved during MWRA's nearly 20-year planning period, to 2006.

EPA's National CSO Policy (April 1994) requires CSO permitees to develop and implement a set of system optimization measures and reporting procedures intended to quantify and minimize CSO discharges in the short term, in part using detailed system characterization, easily implemented and less expensive system improvements and optimized operations and maintenance. In compliance with the policy, MWRA submitted its NMC compliance documentation by January 1, 1997, as required. While most of the reported compliance measures involve operations, maintenance and regulatory functions of MWRA that are funded through the Current Expense Budget, system characterization and hydraulic optimization measures described below were funded through the CIP.

The National Policy also requires permitees to develop and implement a long-term control plan in accordance with the provisions of the policy. In the CIP, MWRA undertook two major planning efforts: one in the period 1986 through 1990, which produced the 1990 CSO Facilities Plan primarily in accordance with the EPA CSO Strategy of 1989, and a second and final planning effort in 1992-1997, which produced a revised long-term plan for CSO control that MWRA recommended in July 1997. With subsequent modifications to the plan, MWRA attained full regulatory and court approval of the revised control plan in April 2006.

MWRA's CSO planning efforts were primarily conducted under the System Master Planning phase of the CIP and produced the following components of a broad plan to control CSO discharges and meet water quality standards:

- Through extensive inspections, system monitoring and modeling, MWRA developed a detailed, field-calibrated assessment of its planned collection and treatment system performance in advance of developing a long-term CSO control plan. The performance assessment incorporated major capital investments in the sewer system already underway or planned by MWRA, including upgrades to the transport system, pumping stations, headworks and Deer Island Treatment Plant. Together with MWRA's and the CSO communities' efforts in the late 1980's and the 1990's to operate and maintain their respective systems more efficiently, these improvements were shown to effectively maximize the system's capacity to control wet weather flows and markedly reduce CSO discharges system-wide. In the period 1988 through 1992, total annual CSO discharge predicted for the Typical Year Rainfall dropped from 3.3 billion gallons to 1.5 billion gallons, with approximately 51% of the remaining discharge treated at five MWRA CSO screening and disinfection facilities. The Charles River especially benefited from these improvements.
- In 1993-1994, MWRA presented a System Optimization Plan ("SOP"), which recommended approximately 160 low cost, easily implemented system modifications to maximize wet weather storage and conveyance. The SOP projects, which were fully implemented by MWRA and the CSO communities by 1997, further reduced CSO discharge by about 20 percent.
- MWRA recommended an extensive set of larger projects covering a range of control technologies to achieve long-term, site-specific CSO control goals using watershed-based assessments of receiving water impacts and uses. MWRA presented a conceptual plan of these improvements in 1994 and refined the recommendations in a facilities plan and environmental impact report it issued in 1997. The long-term plan received initial federal and state approvals in early 1998, allowing MWRA to move the projects into design and construction.
- As MWRA proceeded with implementation of the projects, it evaluated and recommended several adjustments and additions to the long-term plan in the period 1998 through 2006. These adjustments and additions

responded to regulatory inquiries seeking higher levels of control (Charles River) or to new information that raised concerns about construction requirements, cost or CSO control performance (North Dorchester Bay, Reserved Channel, East Boston, and Alewife Brook). A final, comprehensive long-term control plan was approved by EPA and DEP in March 2006 and accepted by the Federal Court in April 2006. This plan and its predicted level of CSO control for each outfall was formally amended in May 2008 to revise the long-term CSO discharges at the Prison Point Facility, based on hydraulic optimization MWRA incorporated into the operations of the facility pursuant to milestones in Schedule Seven. MWRA predicts that the long-term plan, scheduled to be completed in December 2015, will reduce total annual CSO discharge for the Typical Year Rainfall to 0.4 million gallons (an 88% reduction from the 1988 level), with 93% of the remaining discharge to be treated at four MWRA screening and disinfection/dechlorination facilities.

On April 27, 2006, Federal District Judge Richard G. Stearns approved a joint motion of the U.S. Department of Justice (DOJ), EPA, and MWRA that provides a comprehensive resolution of outstanding issues related to MWRA's CSO program. Under the approved motion, MWRA entered a Second CSO Stipulation by which it agreed to implement its previously recommended plans for Alewife Brook/Upper Mystic River and East Boston and to undertake additional work to further reduce CSO discharges to the Charles River from its Cottage Farm CSO Facility. The Cottage Farm facility had been the subject of discussions between EPA and MWRA and related investigations by MWRA since MWRA first issued its long-term control plan in 1997. The additional Charles River work is predicted to reduce CSO discharges from Cottage Farm to 2 activations and 6.3 million gallons in the Typical Year, from the previous goal of 6 activations and 23.6 million gallons. The scope, milestones and performance goals of other CSO projects remain unchanged.

The Federal Court ordered schedule had also contained three unmet milestones related to completion of the CSO control plans for Alewife Brook/Upper Mystic River, East Boston, and region-wide floatables control and outfall closings. The accepted joint motion and the revised court schedule ("Schedule Seven") that was created from it adjusted several previous project milestones and added milestones for the revised Charles River CSO control plan.

In exchange for MWRA agreeing to implement its revised long-term control plan, DEP agreed to issue a series of five (5), up to three-year extensions to the water quality variances for the Lower Charles River Basin and the Alewife Brook/Upper Mystic River through 2020. As they relate to MWRA, the terms and conditions of the variance extensions would be limited to the requirements of the Court Order (i.e. MWRA's responsibility is to implement the long-term control plan contained in the revised Schedule Seven). The most recent variance extensions were issued by DEP on August 31, 2016 for Alewife Brook/Upper Mystic River and for Lower Charles River Basin. These extensions are in effect until September 1, 2019 when it is expected that DEP will issue additional extensions.

The Second CSO Stipulation (2006) replaces the stipulation entered in 1987 that established MWRA's responsibility to develop and implement a region-wide CSO long-term control plan. The Second CSO Stipulation states that once MWRA has implemented the recommended plan and demonstrated that it meets the specified goals for activation frequency and discharge volumes, each CSO community will be solely responsible for level of control and other regulatory requirements at the CSO outfalls it owns and operates in accordance with its NPDES discharge permit. These important conditions in the Second Stipulation provide much greater certainty to the MWRA and its ratepayers relative to the scope and cost of the CSO program through 2020. The elements of the final long-term CSO control plan and the numerical CSO discharge goals for each receiving water segment are presented in Table 1 on the following page.

The CSO project schedules in Schedule Seven are aggressive and reflect project-specific design, permitting and construction requirements. Cost risks include unforeseen subsurface conditions, utility conflicts and the need to manage traffic and community impacts in densely populated neighborhoods. MWRA entered into memoranda of understanding (MOU) and financial assistance agreements (FAA) with BWSC, City of Cambridge and Town of Brookline, by which each community implemented one or more of the 35 CSO projects and MWRA funded eligible engineering, construction and force account costs. The BWSC MOU/FAA (9 projects) ended on June 30, 2017. MWRA and BWSC entered into a new four-year financial assistance agreement for Dorchester Interceptor Inflow Removal (formerly part of the South Dorchester Bay sewer separation project) effective July 1, 2017. The Town of Brookline MOU/FAA (1 project) ended on July 31,2014, and the City of Cambridge MOU/FAA (5 projects) is scheduled to end on June 30, 2018.

<sup>\*</sup>Floatables controls are recommended at remaining outfalls and are included in the listed projects and capital budgets.

MWRA commenced implementation of the long-term CSO control plan in 1996. Project schedules, which reflect compliance with Federal Court milestones, are presented in Table 2 on the following page. By December 2015, MWRA and the CSO communities had completed all of the 35 projects in the plan. The completed CSO projects, together with earlier improvements to MWRA's wastewater conveyance and treatment systems, including the upgraded Deer Island Treatment Plant and associated pump stations, are predicted and intended to reduce the total annual volume of CSO discharge in MWRA's federal and state regulatory-approved Typical Rainfall Year from

3.3 billion gallons in 1988 to 0.441 billion gallons, an 88% reduction, with 93% of the remaining overflow receiving treatment at MWRA's four long-term CSO facilities.

MWRA's CSO program includes temporary flow metering and other efforts to collect and evaluate new data to track system performance. The performance of the sewerage system is continuously improving as CSO and non-CSO projects are completed. Updated assessments of the system's hydraulic performance and updated estimates of CSO discharges using actual field data and computer model simulations are essential to verify the predicted benefits of the CSO-related improvements as they are completed, to ensure that the system hydraulic model reflects updated conditions, and to support continuing CSO design efforts and long-term goal tracking.

MWRA's NPDES permit and the variances for the Charles River and Alewife Brook/Upper Mystic River require MWRA to estimate CSO discharges at each permitted outfall for all storm events on an annual basis. This is accomplished by MWRA staff using the InfoWorks collection system model and data from permanent and temporary meters located in the interceptor system, at CSO treatment facilities and at other CSO outfalls. In addition, the Federal Court schedule requires MWRA to conduct a system-wide performance assessment after completing the CSO projects. The court schedule requires MWRA to commence the performance assessment by January 2018 and submit a report on the assessment findings to EPA and DEP by December 2020. MWRA issued the Notice to Proceed with Contract 7572, CSO Post-Construction Monitoring and Performance Assessment on November 8, 2017, ahead of and in compliance with the January 2018 milestone.

Anticipated operating cost impacts of the CSO program are summarized below and will be further developed as part of the planning and design phases for individual projects.

#### **Program**

The following projects are court mandated, are recommended in MWRA's approved long-term CSO control plan, and are required to meet Massachusetts Surface Water Quality Standards.

Project	Purpose
MWRA Managed	
North Dorchester Bay & Reserved Channel	Virtually eliminate CSO discharges (25-year storm control) and provide a 5-year storm level of separate stormwater control to minimize beach closings along North Dorchester Bay in South Boston.
Hydraulic Relief	Eliminate hydraulic restrictions between local and MWRA systems at two locations, in Boston (Outfall BOS017) and Cambridge (Outfall CAM005) to improve collection and conveyance of wet weather flows, thereby reducing CSO discharges into the Mystic and Charles Rivers, respectively.
East Boston Branch Sewer Relief	Increase hydraulic capacity and provide long-term structural integrity to MWRA's East Boston Branch Sewer through the replacement or rehabilitation of the existing sewers. Completion of this project will increase wet weather transport capacity and reduce CSO discharges along the East Boston shoreline, minimizing CSO impacts to the Mystic/Chelsea Confluence, Chelsea Creek and Boston Inner Harbor and facilitating the beneficial uses of these receiving water segments.
BOS019 Storage Conduit	Control CSO discharges at Outfall BOS019, which discharges to the Little Mystic Channel in Charlestown, by storing most of the overflows and pumping them back into the interceptor system after storms.
Chelsea Trunk Sewer Relief	Control CSO discharges at Outfalls CHE002, CHE003, CHE004, and CHE008, which discharge to the Mystic/Chelsea Confluence and Chelsea Creek, by relieving a local trunk sewer and the MWRA Chelsea Branch Sewer and by repairing Outfall CHE008. The Chelsea Branch Sewer relief project also provides relief to the lower portion of the Revere Extension Sewer to improve service and control surcharging.
Union Park Detention Treatment Facility	Reduce the frequency and impacts of CSO discharges from the BWSC Union Park Pumping Station, which discharges into the Fort Point Channel at Outfall BOS070, by providing fine screening, disinfection, dechlorination and a level of detention and solids removal.

Project	Purpose			
Upgrade Existing CSO Facilities and MWRA Floatables Control	Minimize CSO impacts to the Lower Charles River, Upper Inner Harbor, Mystic/Chelsea Confluence and South Dorchester Bay receiving waters by upgrading five MWRA CSO treatment facilities (Fox Point, Commercial Point, Cottage Farm, Prison Point, and Somerville Marginal), and providing floatables control at MWRA CSO outfalls along the Lower Charles River Basin that are not associated with treatment facilities.			
MWR003 Gate, Rindge Ave. Siphon Relief and SOM01A	Minimize CSO discharges to Alewife Brook as part of MWRA's Alewife Brook CSO control plan and provide sewer system flood control in extreme storms with a control gate at outfall MWR003 and relief of MWRA's Rindge Ave. Siphon. Upgrade local connection capacity and provide floatables control at the City of Somerville's Outfall SOM01A.			
Charles River CSO Controls	Bring the MWRA's "Brookline Connection" into service and implement Cottage Farm influent gate controls and other facility inflow controls to minimize treated discharges to Lower Charles River Basin at the Cottage Farm facility.			
Community Managed				
South Dorchester Bay Sewer Separation (Fox Point)	Eliminate CSO discharges to South Dorchester Bay by separating combined sewer systems in Dorchester. This project allows MWRA to decommission the Fox Point CSO Facility.			
South Dorchester Bay Sewer Separation (Commercial Point)	Eliminate CSO discharges to South Dorchester Bay by separating combined sewer systems in Dorchester. This project allows MWRA to decommission the Commercial Point CSO Facility.			
Stony Brook Sewer Separation	Minimize CSO discharges to Stony Brook Conduit and the Back Bay Fens, both of which drain to the Lower Charles River Basin, by separating combined sewer systems in parts of Roxbury and Jamaica Plain. Implementation of this project is intended to reduce the number of overflows to the Stony Brook Conduit from as many as 22 to 2 in the Typical Year and reduce annual CSO discharge volume by 99.7%.			
Neponset River Sewer Separation	Eliminate CSO discharges to the Neponset River and protect water quality at downstream swimming areas in South Dorchester (primarily Tenean Beach) by separating combined sewer systems in the Neponset section of Dorchester and by permanently closing CSO regulators associated with Outfalls BOS093 and BOS095.			
Constitution Beach Sewer Separation	Eliminate CSO discharges at the Constitution Beach CSO Facility, allowing decommissioning of the facility, by separating combined sewer systems in parts of East Boston.			
Cambridge Alewife Brook Sewer Separation	Minimize CSO discharges to Alewife Brook by separating combined sewer systems in parts of Cambridge and upgrading local system connections to MWRA's Alewife interceptors. Close certain outfalls.			
BWSC Floatables Control	ontrol Limit the discharge of floatable materials from five BWSC combined sewer outfalls along Boston Inner Harbor and Fort Point Channel.			
Cambridge Floatables Control	Limit the discharge of floatable materials from Cambridge CSO outfalls that will remain following completion of MWRA's CSO control plan.			
Fort Point Channel Sewer Separation  Minimize CSO discharges to Fort Point Channel by separating sewer tributary to Outfalls BOS072 and BOS073. Implementation of the recoms sewer separation plan will reduce the number of overflows from these from as many as 23 to zero in the Typical Year. Also, relocate a CSO regul perform limited sewer separation to reduce CSO discharges from the Dorchester Brook Sewer to Fort Point Channel with a MWRA funding cap million to BWSC.				

Project	Purpose
Morrissey Boulevard Drain	Reroute stormwater away from the Outfall BOS087 tributary area and the North Dorchester Bay storage tunnel to Savin Hill Cove in large storms, to increase the level of stormwater control along the South Boston beaches provided by the tunnel.
Reserved Channel Sewer Separation	Minimize CSO discharges to Reserved Channel by separating combined sewer systems in a portion of South Boston. Implementation of the recommended sewer separation plan will reduce the number of overflows to Reserved Channel from as many as 37 to 3 in the Typical Year.
Brookline Sewer Separation	Separate several areas of Brookline, totaling 72 acres, where there are remaining combined sewers tributary to MWRA's Charles River Valley Sewer. The project is intended to reduce treated CSO discharges to the Lower Charles River Basin at the Cottage Farm Facility.
Bulfinch Triangle Sewer Separation	Separate the combined sewers in a 61-acre area of Boston bounded by North Station, Haymarket Station, North Washington St., and Cambridge St. The project is intended to reduce CSO discharges to the Lower Charles River Basin and Upper Inner Harbor, reduce overflows to the Prison Point CSO Facility, and close outfall BOS049.
CSO Support	
CSO Planning and Support	The goals of the CSO Program are to minimize CSO discharges, greatly reduce beach closings following wet weather events, and maximize the beneficial use of CSO receiving waters, in compliance with state water quality standards. This project includes CSO conceptual planning, system master planning, and facilities planning/environmental review that support these goals. It also includes directly related watershed planning activities, development of short-term CSO control measures (known as System Optimization Plans, or SOPs), various as-needed technical support and system performance assessments, including the court-mandated CSO performance assessment in the period 2018-2020, and acquisition of land, easements and construction permits required for CSO project implementation.

# Expenditure Forecast (in \$000s) and Program Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$910,118	\$900,500	\$9,618	\$3,287	\$66,080	\$929	\$6,331	\$0

Program Status 12/17	99.1%	Status as % is approximation based on project budget and expenditures. MWRA and the CSO communities completed the remaining CSO projects in December 2015 in compliance with Schedule Seven. (See individual project status and background information).
----------------------------	-------	--

# Changes to Program Scope, Budget, and Schedule

Project Cost			Schedu	Scheduled Completion Date			FY19-23 Spending		
FY18 FY19 Chge.		FY18	FY18 FY19 Chge. FY18		FY19	Chge.			
\$910,574			Dec-15	Dec-15	None	\$6,605	\$6,331	(\$274)	

# **Explanation of Changes**

Project cost change primarily due to updated final costs for Fort Point Channel Sewer Separation (\$0.4M), South Dorchester Bay Commercial Point of (\$0.4M), and South Dorchester Bay Fox Point of \$0.4M.

# **CEB Impacts**

•	completion and start-up of these projects will result in a total net increase of \$750,000 in FY23 (\$350,000 fc	or
	eriodic cleaning of the North Dorchester Bay Tunnel every five years per the 2004 Supplementa	al
	nvironmental Impact Report) and an additional \$400,000 to inspect BWSC outfalls and again in FY28.	

# S. 341 South Dorchester Bay Sewer Separation (Commercial Point)

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Fulfills a regulatory requirement

This project, together with sewer separation at Fox Point, will eliminate CSO discharges to South Dorchester Bay by separating combined sewer systems in Dorchester. The project is court mandated, is in accordance with MWRA's approved long-term CSO control plan, and is required to meet DEP water quality standards.

## **Project History and Background**

This project involves the construction of new storm drains and appurtenant structures, relocation of storm runoff connections from the existing combined sewers to the new storm drains, and rehabilitation of the existing combined sewers for use as sanitary sewers. The plan calls for construction of approximately 65,000 feet of new storm drains. BWSC is implementing the project with MWRA funds.

A contract for design services was executed by Boston Water & Sewer Commission (BWSC) in June 1996, and a preliminary design report was submitted in December 1997. BWSC executed a separate contract for construction management services in December 1998 and commenced construction in April 1999. BWSC completed all of the sewer separation contracts and closed all of the CSO regulators tributary to South Dorchester Bay by June 2007, and MWRA decommissioned the Commercial Point CSO Facility in November 2007. BWSC is conducting flow monitoring and hydraulics model evaluations to verify that sufficient inflow has been removed from the sewer system and the project performance objectives for the sewer system have been achieved. Downspout disconnection and inflow removal are expected to continue through June 2021.

#### Scope

Sub-phase	Scope	Status			
Design	Design services for construction contracts to be bid, awarded, and managed by BWSC.				
Construction	Construction of 65,000 feet of new storm drains and appurtenant structures, managed by BWSC. Relocation of storm runoff connections from the existing combined sewers to the new storm drains, rehabilitation of the existing combined sewers for use as sanitary sewers, individual building downspout removal and street paving are also included.	Completed			
Dorchester Interceptor Inflow Removal Construction	Phase to address Dorchester Interceptor Inflow Removal work. Previously, work was included in Construction phase listed above.	Future			

Total Budget	Payments thru FY17	Remaining Balance	FY19	FY14-18	FY19	FY19-23	Beyond FY23
\$63,619	\$59,862	\$3,758	\$0	(\$1,286)	\$0	\$3,758	\$0

Project Status 12/17	94.1%	Status as % is approximation based on project budget and expenditures.

# **Explanation of Changes**

• Project cost changed to reflect updated cost estimates for final eligible work.

# **CEB Impacts**

• No impacts identified at this time.

# S. 346 Cambridge Sewer Separation

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Fulfills a regulatory requirement

To minimize CSO discharges to Alewife Brook by separating combined sewer systems in parts of Cambridge and upgrading local connections to MWRA's interceptors. This project is court mandated, is in accordance with MWRA's approved long-term CSO control plan, and is required to meet DEP water quality standards.

#### **Project History and Background**

The City of Cambridge is managing the separation work with MWRA funds and oversight. The City of Cambridge executed a contract for design services in January 1997, and completed the first four, early construction contracts in 2002.

As reported to the court in 1999, information gathered by the City of Cambridge during the design phase of this project indicated that the physical configurations of the Cambridge sewer and storm drain systems, including the degree to which these systems are interconnected, was significantly different from conditions shown on the city's base plans and older design plans. Both sets of plans were used by MWRA to develop the conceptual plan for the project. As a result, extensive additional work to separate sewers is required to meet CSO control goals. While construction began in 1998 on schedule, completion of construction has been delayed.

MWRA responded to the significant increase in estimated project costs by instructing Cambridge to suspend remaining final design efforts and award of any construction contracts not yet approved, until MWRA and Cambridge could complete a thorough reassessment of project costs and alternatives. At that time, Cambridge had received approval from MWRA to commence four of the ten proposed construction contracts that comprised the original scope.

Based upon an evaluation conducted by MWRA and Cambridge of alternatives that considered cost, performance, and non-monetary factors, the revised recommended plan for controlling CSO discharges to Alewife Brook, like the original plan, is a partial sewer separation alternative that includes the following components:

- Completion of sewer separation in the CAM004 tributary area (similar to the original CSO control plan, but with expanded scope).
- Separation of common manholes in the CAM400 tributary area (new).
- Relief of dry weather flow connections at CAM002, CAM401B, and SOM01A (new).
- Relief of an existing siphon and installation of a flow control gate at MWR003 (new).
- No further sewer separation in the CAM002 tributary area. (Although this work was included in the original plan and a small, related construction contract was completed by Cambridge in 1999, the revised plan recommends not completing separation in this area.
- No additional CSO control recommended for the recently discovered outfall at CAM401B.
- Floatables control at remaining CSO outfalls.

On May 24, 2000, the Board of Directors approved the revised CSO Control Plan for Alewife Brook. This budget reflects MWRA's estimate of the cost and MWRA's share of the revised plan. The federal court schedule milestone for completion of construction of sewer separation was January 2000. MWRA previously informed the court and court parties that MWRA would be unable to meet this milestone due to the increased scope of the project. In April, 2006 the court schedule was amended to incorporate milestones for each of the components of the revised recommended plan.

Cambridge submitted a Second Supplemental Preliminary Design Report (SSPDR) for the final recommended plan as presented in the Final Variance Report for the Alewife Brook/Upper Mystic River. However, Cambridge was unable to move forward with construction of the new stormwater outfall and constructed stormwater wetland of Contract 12 due to delays in obtaining relief from the citizens' appeal of the Superseding Order of Conditions that

was issued by Massachusetts Department of Environmental Protection ("DEP") in March, 2005, pursuant to the Wetlands Protection Act. The stormwater outfall and constructed stormwater wetland are critical early components of the long-term CSO control plan for the Alewife Brook and are necessary to support planned sewer separation in the CAM004 area and the closing of the CAM004 regulator. Administrative law decisions were issued in the spring of 2007, allowing DEP to issue a final superseding order of conditions. On June 1, 2007, the Acting DEP Commissioner issued a final decision sustaining the earlier superseding order DEP had issued. On June 12, 2007, the citizens group that had appealed the earlier orders filed a request for reconsideration of the DEP final decision, but DEP formally declined this request on October 16, 2007. On November 14, 2007, the appellants appealed this final DEP decision to Superior Court. Notwithstanding the Superior Court filing, the City of Cambridge now has wetlands approval to construct Contract 12. Design and construction activities related to the revised Alewife Brook CSO control plan were delayed by at least 27 months beyond the Schedule Seven milestones due to the wetlands appeals.

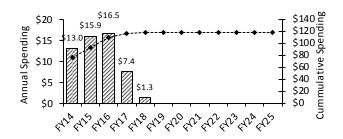

On July 16, 2008, MWRA's Board of Director's approved full funding of MWRA's then-estimated cost share for the Alewife Brook (CAM002-004) Sewer Separation project and Cambridge Floatables Control at \$60 million and authorized the City of Cambridge to move forward with design and construction. In October 2008, the City of Cambridge resumed design of the CAM004 stormwater basin and outfall, commenced design of CAM400 manhole separation, and commenced design of the interconnections relief and floatables control work. The City of Cambridge commenced construction of the CAM400 manhole separation project and the interconnections relief and floatables project in one construction contract in January 2010 and completed all work in March 2011. Cambridge issued notice to proceed with Contract 12, stormwater basin and outfall in April 2011 and completed construction of CSO related components in April 2013 in compliance with Schedule Seven. In September 2012, Cambridge issued the notice to proceed with the first (Contract 8A) of four construction contracts (8A, 8B, 9, and Concord Lane) to complete the CAM004 sewer separation project, in compliance with Schedule Seven. Cambridge issued the notices to proceed with Contract 8B in September 2013, Contract 9 in February 2014 and Concord Lane in March 2015. By November 2015, Cambridge had attained substantial completion of contracts 8A, 8B and Concord Lane, and on December 23, 2015, in compliance with Schedule Seven, Cambridge attained substantial completion of Contract 9. Cambridge substantially completed related surface restoration work in the CAM004 sewer separation area in December 2017. Remaining costs eligible for MWRA funding through the end of the financial assistance agreement with Cambridge include construction punch list items, close-out of the Cambridge contracts and support of MWRA final eligibility reviews.

# S. 359 Reserved Channel Sewer Separation

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Fulfills a regulatory requirement

To minimize CSO discharges to the Reserved Channel by separating combined sewer systems in an area of South Boston. Implementation of the recommended sewer separation plan will reduce the number of overflows to the Reserved Channel from as many as 37 to 3 in the Typical Year. This project is court mandated, is in accordance with MWRA's approved long-term CSO control plan, and is required to meet DEP water quality standards.

#### **Project History and Background**

In April 2001, MWRA filed a Notice of Project Change with MEPA, recommending a reassessment of the overall CSO control approach for North Dorchester Bay and the Reserved Channel. The reassessment was completed in April 2004, when MWRA filed the Supplemental Facilities Plan and Environmental Impact Report for North Dorchester Bay and the Reserved Channel, which recommended a new plan for controlling CSO discharges to the Reserved Channel, by separating sewers in a 355 acre drainage area tributary to the Channel. Schedule Seven in the Federal District Court Order requires MWRA, in cooperation with Boston Water & Sewer Commission (BWSC), to commence design by July 2006, commence construction by May 2009 and complete construction by December 2015. In May 2009, BWSC issued the Notice-to-Proceed for the first of nine construction contracts for this project and in the period 2010-2015 issued the Notices-to-Proceed for the remaining eight construction contracts. As of December 2015, in compliance with Schedule Seven, BWSC had attained substantial completion of all nine contracts, including the outfall cleaning contract (BWSC Contract 1), four sewer separation contracts (Contracts 2, 3A, 3B and 4), two consecutive paving contract (contracts 7 and 8), a sewer and cleaning contract (Contract 5 – ineligible for MWRA funding), and a downspout disconnection contract (Contract 6).

# S. 324 CSO Planning and Support

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Fulfills a regulatory requirement

The goals of the CSO Program are to minimize CSO discharges and their impacts, eliminate beach closings caused by CSOs, and maximize the beneficial use of CSO receiving waters, in accordance with national and state CSO policies and in compliance with state water quality standards. This project includes CSO conceptual planning, system master planning, and facilities planning/environmental review. It also includes directly related watershed planning activities, development of short-term CSO control measures (known as System Optimization Plans or SOPs), various as-needed technical support activities, and acquisition of land and easements required for CSO control plan implementation.

#### **Project History and Background**

MWRA CSO planning work began in 1986. A revised Final Conceptual Plan and System Master Plan were completed in 1994, and a Final CSO Facilities Plan and Environmental Impact Report were filed with MEPA in August 1997. A MEPA certificate was issued in October 1997. In December 1997, DEP issued water quality determinations that were necessary for final CSO plan approval by DEP and EPA. DEP issued a two-year variance for the Charles River in October 1998 and has extended this variance several times. DEP issued a three-year variance for Alewife Brook and Upper Mystic CSOs in March 1999 and has extended the term of the variance several times. Consultant services have included assistance to MWRA in satisfying variance conditions.

As part of CSO Planning and Support, MWRA provided financial and technical assistance to the Charles River Watershed Association in its watershed planning efforts for the Charles River in the 1990s, known as the IM3 Study. MWRA also funded a portion of the costs of a U.S. Geological Survey (USGS) water quality study of the Charles River Basin. Results of these studies will provide additional technical information to support the reassessment of the appropriateness of the recommended Charles River controls in MWRA's CSO plan. To comply with its requirements under the Charles River CSO variance, in 1999 MWRA began funding USGS efforts to collect updated information on Charles River water quality. Final payments to the Charles River Watershed Association and USGS were made in the fall of 1998 and the fall of 2001, respectively.

The federal court order in the Boston Harbor Case required MWRA to develop, by June 1993, a plan for optimizing the existing combined sewer systems to maximize transport and in-system storage capacities, thereby minimizing CSO discharges prior to developing and implementing a long-term control plan. In June 1993, MWRA completed a report entitled System Optimization Plans (SOP) for CSO Control, which recommended more than 100 relatively low cost and easily implemented projects to optimize operation of existing systems. The projects were designed and constructed primarily by the CSO communities, pursuant to SOP financial assistance agreements executed between MWRA and each CSO community. Under the agreements, MWRA reimbursed the communities for design and construction costs. SOP work also includes two projects that are part of the long-term plan: Somerville Baffle Manhole Separation and Somerville Floatables Control. Short-term plans for CSO SOPs were completed in 1997 and MWRA obtained regulatory approvals for its long-term plan in 1997 and 1998.

Various CSO plan reevaluations and systems assessments have been performed under amendments to the CSO Master Planning contract. These include: reevaluation of the Alewife Brook sewer separation plan; assessment of Cottage Farm CSO Facility performance: reevaluation of the need for the Dorchester Brook In-line Storage Project (not included in the CSO Plan or the CIP); reevaluation of the feasibility of closing MWR010; reassessment of CSO discharges from the Boston Marginal Conduit to reevaluate the need for floatables control; and reevaluation of the cost-effectiveness of the East Boston Branch Sewer Relief project in light of cost increases.

By amendment to the Master Planning contract MWRA also added system modeling services to estimate and report actual CSO discharges on an annual basis (through 2003), in compliance with provisions in MWRA's renewed NPDES permit. Since 2004, the annual modeling activities have been conducted by MWRA staff.

The performance of the sewerage system is constantly improving as CSO and non-CSO projects are completed and as maintenance efforts continue to increase the system's capacity. Updated assessments of the system's hydraulic performance and estimates of CSO discharges based on actual field data are essential to verify the predicted benefits of various CSO-related improvements, to recalibrate the system hydraulic model to reflect updated conditions, and to provide up-to-date information to support CSO planning and design efforts. This project provides for temporary flow metering and other efforts to gather and evaluate new data and track system performance. It also includes technical support and system assessments to support the 3-year CSO performance assessment required by Schedule Seven, with work commencing by January 2018 and a report due to the Court by December 2020.

This project has also supported land and easement acquisitions and funded permit costs for all MWRA managed projects in the long-term CSO Control Plan.

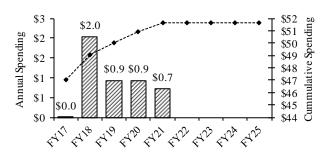

#### Scope

Sub-phase	Scope	Status
Technical Assistance	Preliminary planning services prior to and in support of the 1988-90 Facilities Planning/EIR efforts.	Completed
Planning/EIR	Facilities planning and environmental review of CSO control alternatives (1990 Recommended CSO Control Plan).	Completed
Master Planning	System inspections, flow monitoring, water quality monitoring, and performance assessments to improve MWRA's understanding of the combined sewer and regional wastewater systems, optimize the performance of the existing systems, and reassess CSO control needs in the context of evolving EPA policy and a system master plan. Development of the 1997 Facilities Plan/EIR and subsequent reassessments of, and revisions to, that plan.	Completed
Watershed Planning	External watershed planning efforts that may affect CSO control needs, including the Charles River Watershed Association IM3 Study and ongoing USGS water quality studies.	Completed
Modeling	Receiving water quality modeling support to the Master Planning efforts.	Completed
SOP Program	Development and implementation of System Optimization Plans for short-term CSO control. Implemented by CSO communities. Also includes funding for Somerville Baffle Manhole Separation in the long-term control plan.	Completed
System Assessment	Temporary flow metering and other efforts to gather and evaluate new data on system performance.	Active
Technical Review	Technical assistance for the entire CSO control plan including affordability analysis.	Active
CSO Performance Assessment	Study to assess the performance of completed CSO projects to see if CSO control goals were met and to assess if further work is required.	Future
Land/Easements	Acquisition of land and easements for construction of MWRA-implemented projects. Also, permits not covered in design and construction contracts.	Active
Somerville Marginal In-System Storage	Memorandum of Agreement between MWRA and the City of Somerville approved on September 14, 2016. MWRA agreed to share the cost of the CIPP liner rehabilitation which is estimated at \$4.2 million since MWRA's CSO control plan utilizes both the in-line storage and conveyance capacity of the current brick sewer to control and reduce the CSO volume discharged to the Mystic River.	Active

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$52,810	\$48,208	\$4,602	\$2,028	\$872	\$929	\$2,574	\$0

## **CSO Support**

Project Status 12/17	91.4%	Status as % is approximation based on project budget and expenditures. Master Planning was substantially complete in September 2004. On September 14, 2005, the MWRA Board of Directors approved an MOU with Massport that governs the Authority's construction and long-term operation on land owned by Massport, including the North Dorchester Bay tunnel mining shaft and dewatering pump station. Payments to Massport for temporary and permanent easements are complete. Schedule Seven requires MWRA to complete a CSO performance assessment in the period 2018-2020. MWRA issued the Notice to Proceed for Contract 7572, CSO Post-Construction Monitoring and Performance Assessment, on
		November 8, 2017, ahead of and in compliance with the January 2018 milestone.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending

# S. 128 Infiltration/Inflow (I/I) Local Financial Assistance Program

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Provides environmental benefits
 ☑ Fulfills a regulatory requirement

Infiltration and inflow (I/I), groundwater and storm water that enter the collection system, contributes significantly to the total wastewater flow treated by MWRA. This depletes capacity that would otherwise be available to transmit sanitary flows, resulting in sewer surcharging, overflows of untreated sewage, more frequent combined sewage overflows, and higher pumping and treatment costs. The I/I Local Financial Assistance Program provides funding assistance for communities to rehabilitate their collection systems with the goal of structurally reducing I/I flows. Funding assistance for local projects complements other MWRA strategies for regional I/I reduction including wastewater metering to support flow based rates, provision of I/I estimates to communities, technical assistance to communities on local projects, regional coordination of I/I policy issues, and interaction with DEP and EPA.

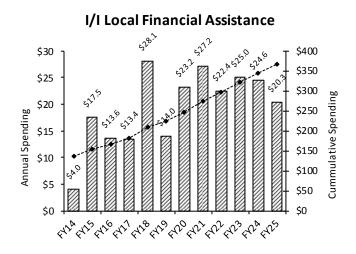

#### **Project History and Background**

MWRA's Deer Island Wastewater Treatment Plant receives flow from 43 communities. The collection system encompasses 230 miles of MWRA interceptors and over 5,000 miles of community sewers. These sewers are of varying size, shape, age, material, depth, and conditions. All contribute some quantity of infiltration and inflow.

In August 1992, the Board of Directors approved \$25 million to fund the initial phase of the I/I Local Financial Assistance Program. In June 1995, the Board approved \$38.8 million to fund a second phase of the program. Both Phase1 and 2 funds were distributed as 25% grants and 75% interest-free loans. The Board approved \$37 million to fund a third phase of the program in June 1998, an additional \$40 million for Phase 4 in June 2001, an additional \$40 million for Phase 5 in June 2004, an additional \$40 million for Phase 6 in June 2006, an additional \$40 million for Phase 7 and an additional \$40 million for Phase 8 in June 2009. The grant/loan ratio was revised for Phases 3 through 8 to 45% grants and 55% interest-free loans. During the FY15 Final CIP development in June 2014, Phases 9 and 10 were added to the CIP at \$80 million each to be distributed as 75% grants and 25% interest-free loans Payback period for Phases 9 and 10 loans was also extended from 5 years to 10 years. During the FY19 Proposed CIP development, Phases 11 and 12 were added at \$60 million each to be distributed as 75% grants and 25% interest-free loans. All program funds are allocated to the 43 member communities based on their share of MWRA's wholesale sewer assessment. Binding commitments for funds are issued by MWRA in the form of Financial Assistance Agreements. Distribution of funds is authorized through FY2025.

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$332,585	\$176,768	\$155,817	\$28,146	\$76,699	\$13,958	\$111,780	\$15,891

Project Distribution	60.4%	Through December 2017, MWRA has distributed \$163.4 million in grants and \$187.5 million in interest-free loans to fund over 538 separate projects in 43 communities
Status 12/17		under the I/I Local Financial Assistance Program.

Project		
Repayment	69.0%	Through December 2017, a total of \$160.8 million has been repaid by member
Status		communities receiving interest-free loans.
12/17		

# Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$242,585	\$332,585	\$90,000	Jun-35	Aug-35	2 mos.	\$52,114	\$111,780	\$59,666

## **Explanation of Changes**

• Project cost and spending changed primarily due to the addition of Phases 11 and 12.

## **CEB Impacts**

• No impacts identified at this time.

# Waterworks System Improvements

Wachusett Reservoir

# **Integrated Water Supply Improvement Program**

MWRA's Integrated Water Supply Improvement Program is an initiative consisting of a series of projects to protect reservoir watersheds, build new water treatment and transmission facilities, upgrade distribution storage and MWRA and community pipelines and interim improvements to the Metropolitan Tunnel system redundancy. The program improves each aspect of the water system from the watersheds to the consumer to ensure that high quality water reliably reaches MWRA customers' taps. The program began in 1995 with the initial components which were completed by 2005 and the program remains active as the scope was expanded to continue to improve the water system. The main program components are as follows:

**Watershed Protection** The watershed areas around Quabbin and Wachusett Reservoirs are pristine areas with 85% of the land covered in forest or wetlands and about 75% protected from development by direct ownership or development restrictions. MWRA works in partnership with the Department of Conservation and Recreation (DCR) to manage and protect the watersheds. MWRA also finances all the operating and capital expenses for the watershed activities of DCR and on-going land acquisition activities.

**MetroWest Water Supply Tunnel** The 17-mile-long 14-foot diameter tunnel connects the new Carroll Water Treatment Plant at Walnut Hill in Marlborough to the greater Boston area. It is now working in parallel with the rehabilitated Hultman Aqueduct to move water into the metropolitan Boston area. Construction began on the tunnel in 1996 and the completed tunnel was placed in service in October 2003.

Carroll Water Treatment Plant The water treatment plant in Marlborough began operating in July 2005 and it has a maximum day capacity of 405 million gallons per day. This project consolidates all treatment steps into one plant which uses ozone for primary disinfection because ozone is a strong disinfection agent against pathogens such as Giardia and viruses while reducing levels of chlorine disinfection byproducts. Ultraviolet light treatment was added in 2014 as a second primary disinfection process for Cryptosporidium inactivation. The plant also provides corrosion control by adding carbon dioxide and sodium carbonate to raise the water's pH and alkalinity and thus control lead leaching from home plumbing fixtures. The treatment process concludes with fluoridation and residual disinfection with chloramines. A 45 million gallon storage tank on the site allows for daily variation in demand and flexibility in plant operation.

Water Storage Tanks — As required by Massachusetts Department of Environmental Protection (DEP) rules, MWRA is building covered storage tanks to replace open distribution storage reservoirs near cities and towns to lessen the risk that contaminants will get into the tap water. A 20 million gallon tank in Stoneham replaced the open Fells Reservoir, two 12.5 million gallon circular tanks in Ludlow replaced the Nash Hill Reservoir and the 20 million gallon Loring Road tank replaced the Weston Reservoir. The largest tank, the 115 million gallon Norumbega Covered Storage Facility replaced the open Norumbega Reservoir in Weston and was placed in full service in 2004. In 2009, MWRA completed construction of a 20 million gallon tank to replace the currently off-line Blue Hills Reservoir in Quincy. The 20 million gallon Spot Pond Storage Facility to replace the off-line Spot Pond Reservoir in Stoneham was put in service in 2015.

**Pipeline Rehabilitation** An important component of the overall Integrated Water Supply Improvement Program is focus on the long-term rehabilitation of older, unlined cast iron and steel water mains in the MWRA and community systems. Water in direct contact with the metal surface corrodes through both biological and chemical processes resulting in tuberculation, thus narrowing the pipes and providing surfaces for bacteria growth. These processes also often result in consumer complaints about rusty water. To reap the full value of the other investments in the water system, MWRA decided to replace or rehabilitate the poor quality pipe particularly given that as of 1993, more than 80 percent of MWRA pipes were unlined. Since then, MWRA has been proceeding with a program of replacing or rehabilitating (normally through cleaning and lining) unlined cast iron and steel mains. Furthermore, in 1998, almost half (47%) of community pipes were unlined. In 1999, MWRA created a \$250 million zero-interest loan program to encourage and facilitate rehabilitation of local mains. An additional \$210 million was

added in FY11 for the Phase 2 program known as Local Water System Assistance Program of which \$10 million is allocated among the Chicopee Valley Aqueduct (CVA) communities. The Local Water System Assistance Program was expanded beginning in FY17 to include \$100 million in interest-free loans to communities solely for efforts to fully replace lead service lines. In FY18 Local Water Assistance Program Phase 3 was added in the amount of \$278 million and Phase 3 CVA for \$14 million. The Local Water System Assistance Program was expanded beginning in FY17 to include \$100 million in interest-free loans to communities solely for efforts to fully replace lead service lines. The Lead Service Lone Replacement Loan Program is budgeted over twenty years.

Metropolitan Tunnel System Redundancy – Interim Improvements — Plans for interim improvements to reduce the risk of failure and improve system operating conditions in the event that an emergency occurs are underway. The projects include the Top of Shafts Interim Improvements, Chestnut Hill Emergency Pump Station improvements, Chestnut Hill Emergency Generator, WASM/SPSM PRV Improvements and rehabilitation of WASM 3. These projects will be completed while the proposed tunnel redundancy project goes through environmental review, design, and construction.

\_\_\_\_\_

# S. 542 Carroll Water Treatment Plant

#### **Project Purpose and Benefits**

✓ Contributes to improved public health✓ Fulfills a regulatory requirement

To provide high quality drinking water to MWRA customers and to ensure that the water delivered from the Wachusett Reservoir meets the drinking water quality standards established by the federal Safe Drinking Water Act (SDWA). Part of this objective was met by constructing a 405 million-gallon per day (maximum) water ozonation/chloramination treatment plant primarily in Marlborough with portions of the facility located in Southborough and Northborough. Ultraviolet light disinfection facilities were added in 2014 to comply with new drinking water regulations.

#### **Project History and Background**

MWRA provides drinking water to 2.3 million people in 44 metropolitan Boston communities. The source water supply comes from the Quabbin and Wachusett reservoirs; two large, high quality water bodies in Central Massachusetts. About 50% of the water flowing from the Wachusett Reservoir comes first from the Quabbin Reservoir, the larger reservoir to the west. MWRA received a waiver from filtration requirements for the Quabbin Reservoir in 1991 from the Massachusetts Department of Environmental Protection (Mass DEP), the agency granted primacy to enforce the Safe Drinking Water Act (SDWA) by the United States Environmental Protection Agency (USEPA) in Massachusetts.

In June 1993, MWRA negotiated an administrative consent order with DEP setting forth the steps needed to comply with the Surface Water Treatment Rule (SWTR). The consent order required MWRA to find a site, design a filtration plant, and build it, unless MWRA along with MDC could demonstrate to Massachusetts DEP no later than 1998 that the system met the criteria for avoiding filtration and therefore that filtration was not required. After an extensive research and decision-making process, the MWRA Board of Directors voted in October 1998 to request a waiver of the filtration requirements from Mass DEP and to build a new water treatment facility using ozonation with chloramination for the water from Wachusett Reservoir as part of the Integrated Water Supply Improvement Program. The decision recognized that an ozonation/chloramination plant would provide appropriate treatment of the MWRA water supply from Wachusett Reservoir and that adding filtration components costing \$180 million to the new plant would not provide as much additional benefit as would using funds to rehabilitate old, unlined cast iron pipes in the MWRA and local distribution systems. As part of the treatment technology decision, MWRA's Board also made a commitment to an expanded program of public health surveillance, financial incentives for communities to target rehabilitation of community pipes, and a full review of the need for further treatment including filtration when the plant was complete.

Mass DEP agreed with the MWRA approach in December 1998 and determined that filtration was not required for the MWRA system. Through the Department of Justice, USEPA sued under its SDWA "overfiling" rights, seeking to require MWRA to build a filtration plant and contending that the SDWA allowed no other option. After an extended trial, on May 5, 2000 Judge Stearns issued his decision that MWRA currently complies with all 11 federal criteria for avoiding filtration under the Surface Water Treatment Rule of the Safe Drinking Water Act. He evaluated the current quality of MWRA water and found MWRA's integrated drinking water improvement program including ozonation treatment technology the better approach to "preserving its safety." He found EPA failed to show that filtration of MWRA water was required either as a matter of cost-benefit or scientific necessity. The judge denied EPA's request for injunctive relief but ordered MWRA to give the Court notice of any future violations of the avoidance criteria to allow the consideration of whether the type of relief requested by USEPA might be necessary. No other order was issued. On July 16, 2001, the U.S. Court of Appeals for the First Circuit affirmed Judge Stearns ruling.

The Carroll Water Treatment Plant (formerly Walnut Hill Treatment Plant) was placed in service in July 2005. It provides treatment necessary to fully comply with all current drinking water regulations. EPA issued new regulations in January 2006 for microbial protection (Long Term 2 Enhanced Surface Water Treatment Rule) and disinfection byproduct control (Stage 2 Disinfectants/Disinfection Byproducts Rule). MWRA will not need to make changes to comply with the Stage 2 D/DBP rule. The LT2ESWT rule required a second primary disinfectant and a somewhat more stringent inactivation of cryptosporidium than the plant's current design. This project included the addition of an ultraviolet light disinfection treatment process at the plant to meet requirements of the LT2ESWT rule. The UV system was placed in service in February 2014.

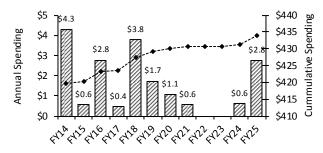

Sub-phase	Scope	Status
Study 1	Investigation of the potential impacts of SDWA amendments on the MWRA system and evaluation of the need, feasibility, and benefits of improved treatment processes.	Completed
Study 2	Evaluation of alternative filtration, disinfection, and corrosion control processes to determine the most appropriate for MWRA source waters. Construction and operation of a pilot plant at the Wachusett Reservoir to allow testing of various treatment technique combinations. Identification of potential locations for treatment facilities.	Completed
AWWARF Red Water Control Strategy Study	Evaluation of treatment options for eliminating discolored water caused by unlined cast-iron pipe. Also investigation of the fundamental aspects of iron chemistry and corrosion using unlined cast-iron pipe from the MWRA community distribution system.	Completed
Emergency Distribution Reservoir Water Management Study	Investigation of potential impacts on the emergency distribution reservoirs resulting from their replacement by new covered distribution reservoirs, and study of ways to maintain their water quality for emergency supply. Norumbega, Weston, Spot Pond, Fells, and Blue Hills Reservoirs have been studied. A pilot study was conducted to evaluate in-reservoir algae treatment for Wachusett Reservoir.	Completed
Cryptosporidium Inactivation Study	Determination of the site-specific efficacy of inactivating Cryptosporidium in Wachusett Reservoir source water using disinfectant alternatives (chlorine/chloramine and ozone/chloramine), and then development of design criteria for the full-scale disinfection contacting system.	Completed
Construction: Cosgrove Disinfection Facility Phases I and II	Construction of the Cosgrove Disinfection Facility. Free chlorine is applied at the Cosgrove Aqueduct to utilize travel time to achieve primary disinfection prior to corrosion control treatment and secondary disinfection.	Completed
Immediate Disinfection- MECo	Massachusetts Electric Co. power line installation to support the disinfection process at the Cosgrove Disinfection Facility.	Completed
Distribution Water Consultant	To provide technical assistance related to distribution system management.	Completed
EIR/Conceptual Design	Environmental reviews, data collection and analyses, and facility designs to support the dual track compliance approach, evaluation of design criteria, site plans, plant hydraulics, and construction of a small-scale demonstration water treatment plant.	Completed

Sub-phase	Scope	Status
Design/CS/RI: Walnut Hill WTP	Design and Engineering Services During Construction for the water treatment plant and associated components.	Completed
WHCP1: Wachusett and Cosgrove Intakes	Upgrade of the Cosgrove Intake and powerhouse to allow automatic, unstaffed operation of the facility. Replacement of the valves and piping in the Wachusett Intake is required to allow this facility to serve as a backup water supply.	Completed
WHCP2: Interim Aqueduct Rehabilitation	Shotcrete lining of the Wachusett Aqueduct to ensure supply of water continues to greater Boston during modifications to Shaft C and to enable it to serve as a backup to the Cosgrove Tunnel.	Completed
WHCP3: Site Work and Storage Tank	Includes clearing and excavation, site access roads, yard piping, and construction of a 45-million gallon storage tank.	Completed
WHCP4: Treatment Facilities	Construction of ozonation, corrosion control, chloramination operations and emergency generator buildings, modifications to Shafts B and C, and installation of system wide instrumentation from Wachusett Reservoir to Norumbega Reservoir.	Completed
WHCP6: Late Site Work	Final grading, landscaping, and paving of treatment facility site.	Completed
Design & Construction WHCP7: Existing Facilities Modifications	Modification to and conversion of the Interim Corrosion Control Facility, Cosgrove Disinfection Facility, Transmission Maintenance Facility. These buildings will be converted from water treatment/quality uses to expanded maintenance shops and SCADA technicians shop facilities for the new water treatment plant. In addition, the project includes demolition of old electrical building, some miscellaneous items at Cosgrove Intake Building and replacement of the roof, lab improvements and HVAC system for Water Quality Lab at Southboro. Also, buildings rehab will incorporate achievable LEED (Leadership on Energy & Environmental Design) goals.	Active
Design Management Support	Professional services and value engineering support to MWRA in review of the water treatment plant design.	Completed
Construction Management/RI	Construction management and resident inspection during construction of the water treatment plant.	Completed
Cosgrove Disinfection Facility Underwater Improvements	Installation of underwater piping needed to apply sodium hypochlorite at Shaft A.	Completed
Community Chlorine Analyzers	Purchase of free chlorine residual analyzers for eight communities to work in association with interim chloramination facilities.	Completed
OCIP	Owner Controlled Insurance Program, providing pollution liability, workers' compensation, general liability, and excess loss coverage during construction of the CWTP.	Completed
Professional Services	As needed legal, insurance, design, and construction specialty services for the Carroll Water Treatment Plant.	Completed
Marlborough MOA	Agreement to mitigate the impacts of the construction of the Carroll Water Treatment Plant on Marlborough.	Completed
WHWTP – MECo	Relocation of electric power lines.	Completed
Site Security Services	Site security services at the Carroll Water Treatment Plant.	Completed
CSX Crossing	Railroad track improvements adjacent to CWTP.	Completed

Sub-phase	Scope	Status
Wachusett Algae Design and Construction	Design and Construction of automated chemical dispensing system for algae control.	Future
Public Health Research	With the assistance of public health agencies and researchers, evaluation of the public health impact of the water treatment changes that occurred in 2004.	Completed
Security Equipment	Design and installation of card access, improved motion and intrusion alarm systems, video surveillance, and monitoring equipment for MWRA facilities.	Completed
WHCP8– Cosgrove Screens Design/CS/RI and Construction	Replace existing manual screens with finer automatically controlled traveling screens.	Completed
AWWARF-Evaluation Ozone and UV	Study of the effects of ozone and ultraviolet treatment on cryptosporidium to ensure inactivation in Wachusett Reservoir.	Completed
Fitout/Construction	Non-construction related items for start-up and operation of the new water treatment plant including furnishings, shop and maintenance equipment, audio/visual supplies, laboratory equipment, and miscellaneous consumable supplies.	Active
Carroll Ultra Violet Disinfection Design, and Construction	Design and construction programs to add Ultra Violet (UV) to the CWTP. UV system placed into service in February 2014.	Completed
As-Needed Technical Assistance No. 1 and No. 2	As-needed design services to support the start-up of the CWTP including electrical engineering, HVAC engineering, mechanical engineering, civil engineering and a variety of geotechnical, environmental, and architectural technical assistance.	Completed
Ancillary Modifications Construction 1	Follow-up construction from the As-Needed Technical Assistance contracts.	Completed
Ancillary Modifications Construction 2	Address improvements in reliability, optimization of plant performance and/or reduce plant operating costs.	Active
Ancillary Mods Design 3 and 4	Additional As-Needed design services as a follow-up for additional improvements at the Carroll Water Treatment Plant.	Completed
Technical Assistance No. 5 and #6	Continuation of as-needed engineering technical assistance for ancillary modifications design and plant optimization.	Completed
Carroll Water Treatment Plant Storage Tank Roof Drainage System Repair	Design and construct a solution that addresses trench drainage system's poor performance. Poor roof drainage could possibly result in water quality problems.	Future
Technical Assistance No. 7 and No. 8	The next two phases of as-needed engineering technical assistance for ancillary modifications design and plant optimization.	Active
Technical Assistance No. 9 and No. 10	The next two phases of as-needed engineering technical assistance for ancillary modifications design and plant optimization.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$435,620	\$419,264	\$16,355	\$3,765	\$11,821	\$1,724	\$3,340	\$9,250

Project Status 12/17	96.7%	Status as % is approximation based on project budget and expenditures. Closed Loop Cooling System, a contract of Ancillary Modifications Construction 2 subphase, was substantially complete in April 2010. Second Gaseous Oxygen Line was substantially complete in May 2012. Wachusett Emergency Connection Valves reached substantial completion in August 2013. Carroll Ultraviolet Disinfection Facility Construction reached substantial completion in February 2014. Existing Facilities Modifications CP-7 Southborough Water Quality Laboratory Upgrades was substantially complete in November 2016 and Marlborough Maintenance Facility contract commenced in April
		November 2016 and Marlborough Maintenance Facility contract commenced in April 2017. Technical Assistance 7 was completed in November 2015. Technical Assistance
		8 began in January 2016 and 9 and 10 are expected to commence in May 2018.

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Schedu	led Completi	d Completion Date FY19-23 Spending			ing
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$439,799	\$435,620	(\$4,179)	Dec-26	Dec-26	None	\$6,195	\$3,340	(\$2,855)

#### **Explanation of Changes**

- Project cost changed due to work in the Ancillary Modification Construction 2 contract and Carroll Water Treatment Plant Asset Protection Evaluation was transferred to the new project Carroll Water Treatment Plan Asset Protection project. Also, updated cost estimate for Existing Facilities Modifications contract.
- Spending changed due to Ancillary Modification Construct 2 work transferred to the new project Carroll Water Treatment Plan Asset Protection project.

#### **CEB Impact**

• Expect \$50,000 in FY27 and \$50,000 in FY28 for utilities for the Wachusett Algae Facility.

# S. 550 Spot Pond Covered Storage Facility

#### **Project Purpose and Benefits**

**M** Contributes to improved public health **M** Improves system operability and reliability

A new storage facility is required to meet the state and federal drinking water guidelines and MWRA's goal of providing a one-day supply of storage. With the Weston and Spot Pond Reservoirs removed from service, MWRA no longer meets the one-day supply goal.

#### **Project History and Background**

The Low Service System, which supplies 25% of the total metropolitan area demand, formerly had Weston Reservoir at its western end, where water was introduced into the system, and Spot Pond as its terminal reservoir at the northeast extremity. Due to transmission problems caused by old, corroded pipe with significantly reduced carrying capacity, this system gradually ceased to function properly and it became necessary, as a makeshift measure, to break this system into segments and transfer water from high service in order to serve large portions of the Low Service area.

The principal low service mains (Weston Aqueduct Supply Mains (WASM), Boston Low, and East and West Spot Pond Supply Mains) have been rehabilitated and their capacity has been restored to as-new condition. The new Weston Covered Storage Facility at Loring Road (constructed as part of the MetroWest Tunnel project) replaced the open Weston Reservoir. The Spot Pond Storage Facility replaced Spot Pond Reservoir in Stoneham.

The new Spot Pond Storage Facility is supplied through a pressure reducing valve on WASM 4 via the West Spot Pond Supply Main. During peak demand periods of the day, water flows into the Low Service System from both Loring Road and Spot Pond storage tanks.

At 20 million gallon capacity, the Spot Pond Storage Facility, comprised of two buried 10 million gallon storage tanks, is the same size as that at Loring Road. Just as pressure reducing valves allow the tanks at Loring Road to be supplied from the high service Norumbega Covered Storage, the Spot Pond Storage tank is supplied with water reduced in pressure from WASM 4.

The Spot Pond Storage Facility also includes a partially buried pump station to provide redundancy to the Gillis Pump Station supplying the Northern High and Northern Intermediate High service areas.

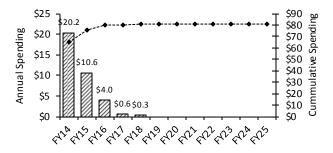

## Scope

Sub-phase	Scope	Status
Environmental Reviews and Conceptual Design (6455/6456)	Preliminary engineering for tank siting, environmental reviews and conceptual design.	Completed
Design/Build (6457)	Design and construction by a single contractor of a 20 million gallon water storage tank and pump station.	Active
Owner's Representative (7233)	Provision of technical program management for the design/build contract procurement, monitoring, and administration.	Active
Easements/Land Acquisition (6868)	To provide adequate land for construction of the water storage tank.	Completed
Early Construction Water Connection (7314)	Construction of piping and meter connection to replace existing water supply to be removed as part of tank construction.	Completed

# S. 555 Carroll Water Treatment Plant Asset Protection

Project Purpose and Benefits

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability
☑ Fulfills a regulatory requirement

To protect the investment of MWRA ratepayers by ensuring timely replacement of equipment and systems.

#### **Project History and Background**

The John J. Carroll Water Treatment Plant has been in service since 2005. Some components of the plant are approaching the end of their service lives while others will need replacement in the future. This project was developed to ensure that MWRA maintains ongoing service while optimizing operations in its water facilities. This project in its current form addresses immediate critical facility and equipment issues.

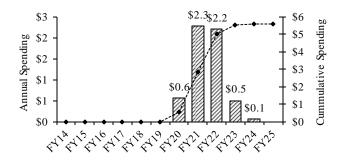

While the current schedule indicates a completion date of 2034 for construction, the CWTP Facility Asset Protection project will be ongoing throughout the useful life of the facilities.

Sub-phase	Scope	Status
Carroll Water Treatment Plant Control Room Fire Suppression System (7592)	Replace the existing wet fire sprinkler system in the CWTP Control Room, Communications Room, Electrical Room and Emergency Operations Center with a clean agent type system that does not use water to suppress a fire.	Future
Carroll Water Treatment Plant Asset Protection Study (7593)	A consultant's evaluation of CWTP's capital assets and recommendations for upgrades or modifications to ensure operational efficiency of these assets.	Future
LOX Yard Redundancy (7594)	Provide new piping, valves, vaporizer and/or additional liquid oxygen storage to eliminate single points of failure in the CWTP Liquid Oxygen Yard.	Future

Sub-phase	Scope	Status
Carroll Water Treatment Plant Water Pump Variable Frequency Drives Replacement (7595)	The variable frequency drives on the CWTP Plant Water System are 13 years old and should be replaced in the near future. The normal life of VFDs is shorter than the pumps they control. It is unlikely that the existing VFDs will be operable until 2030 when the plant water pumps are scheduled to be replaced.	Future
Ozone Generator Re-Build (7596)	Periodic re-building of the ozone generators, including cleaning and gasket replacement, is necessary to maintain proper operation.	Future
Post Treatment Building Soda Ash Equipment Replacement	Replace the existing soda ash feed equipment to maintain operability.	Future
Carroll Water Treatment Plant Chemical System Pipe Pumps, and Tank Replacement (7597)	The condition of the plant chemical system components varies.  There have been leaks in the hypochlorite pipes and tanks. The ammonia, bisulfite and fluoride feed systems are aging. This project will rehabilitate these systems as needed.	Future
HVAC Equipment Replacement (7605)	The HVAC equipment at CWTP is over 10 years old. The refrigerant used in this equipment (R-22) is being phased out. The existing equipment will not function with the new refrigerant. Replacement of this equipment will be necessary.	Future
Water Pump Replacement (7606)	The plant water pumps will need to be replaced in the future as they approach the end of their useful life. The current schedule is to replace these pumps by 2030.	Future
Ozone Generator Replacement (7607)	The ozone generators are currently scheduled to be rebuilt in 2022. Eventually spare parts will no longer be available. The current schedule is to replace the ozone generators by 2030.	Future
Ultra Violet Reactor Replacement (7608)	Replacement of the UV reactors will likely be required by 2034 as spare parts for the existing units may no longer be available then.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$41,570	\$0	\$41,570	\$0	\$0	\$0	\$5,520	\$36,050

# **Explanation of Changes**

Project cost, schedule, and spending changed due to this new project added which includes new contracts for Carroll Water Treatment Plant Chemical System Pipe Pumps, and Tank Replacement, HVAC Equipment Replacement, Water Pump Replacement, Ozone Generator Replacement, and Ultra Violet Reactor Replacement. Also, work was transferred from the Carroll Water Treatment Plant project under the Ancillary Modifications Construction 2 contract to this project including Carroll Water Treatment Plant Control Room Fire Suppression System, LOX Yard Redundancy, Carroll Water Treatment Plant Water Pump Variable Frequency Drives Replacement, Ozone Generator Re-Build, and PT Building Soda Ash Equipment Replacement. Also, Carroll Water Treatment Plant Asset Protection Study was transferred from the Carroll Water Treatment Plant project.

## **CEB Impacts**

· None identified at this time.

# S. 597 Winsor Station/Pipeline Improvements

#### **Project Purpose and Benefits**

 $\mathbf{Z}$  Extends current asset life  $\mathbf{Z}$  Results in a net reduction in operating costs

#### Master Plan Project **2008** Priority Rating 1 (See Appendix 3)

Rehabilitation of the water supply infrastructure at the Winsor Station in Belchertown. Design and construct station piping improvements which would allow water to go to the Swift River without going through the isolation valve. Design and construct means to control flow in the Quabbin Aqueduct. Quabbin Release Pipeline work is also included.

#### **Project History and Background**

Winsor Dam impounds the Quabbin Reservoir. At the dam, an intake feeds two conduits that are interconnected at a powerhouse below the dam. One conduit discharges to the Chicopee Valley Aqueduct; the other conduit feeds a now inoperative hydroelectric turbine/generator unit. A bypass valve at the Winsor Station house also allows flow to be discharged directly to the Swift River.

The water supply infrastructure within the Winsor Station is in need of major repair and upgrade as much of it is over 75 years old. Several other sub-phases are needed to address the extensive work on the Quabbin Transmission System and the Swift River bypasses. These sub-phases include:

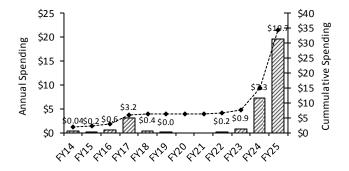

- Winsor Station Chapman Valve Repair & Purchase of Sleeve Valves Immediate replacement of the existing damaged Chapman Valve with sleeve valves.
- Pipeline Replacement Phase 1 To repair and upgrade large-diameter piping and valving in the basement of the Winsor Station including the bypasses.
- Quabbin Aqueduct To replace the antiquated and unreliable shutter system at Shaft 12 with a gate to control flow in the Quabbin Aqueduct and inspect the Quabbin Tunnel and recommend maintenance or repairs. Make building repairs to the Shaft 12 building and Shaft 2.
- Winsor Power Station Upgrades -. Rehabilitate Winsor Power Station and the CVA Intake Structure,
- Hatchery Pipeline- To convey cold, well-oxygenated hypolimnetic water from Quabbin Reservoir to the
  downstream trout hatchery via a new pipeline. A hydro turbine will be located in a vault near the connection
  of the pipeline to the CVA that would capture some of the hydraulic energy contained in the pipeline as the
  water is conveyed to the hatchery. The power generated will be sold back to the grid.

Sub-phase	Scope	Status
Quabbin Aqueduct & Winsor	Preliminary design of improvements at Shafts 1, 2, 9 and	Completed
Power Station Preliminary	12 of the Quabbin Aqueduct and the Winsor Power	
Design (7114)	Station.	
Shaft 12 Isolation Gate Design	Installation of a gate to control flow at Shaft 12, the	Completed/Future

(7197)	safety and reliability of the transmission system.	

Sub-phase	Scope	Status
Quabbin Aqueduct Inspection (6277)	TV inspection of the Quabbin Aqueduct.	Future
Winsor Power Station Upgrades and Quabbin Buildings Rehabilitation Design CA/RI (7460) and Construction (7115)	Design and Construction to address piping improvements and building rehabilitation for water supply and Swift River discharge. Will also include improvements to the CVA Intake Structure and include Shaft 2 structural improvements, and Shaft 12 intake and service building electrical, plumbing, and building improvements.	Future
Hatchery Pipeline Design (7017) and Construction (7235)	Design and construction of approximately 5,000 feet of pipeline to convey 6 MGD of water from the CVA to the downstream trout hatchery. The project would provide a consistent and reliable source of high quality cold water to the hatchery, as well as supplement flows to the Swift River. The project will also include a hydro turbine that would capture some of the hydraulic energy contained in the pipeline as the water is conveyed to the hatchery which will be sold back to the grid. The hydro turbine portion is funded under the Alternative Energy Initiatives project and Massachusetts Leading by Example Program.	Completed
Winsor Station Chapman Valve Repair (7212)	Construction of replacement valving for the existing 36" Chapman Butterfly Valve (design by Technical Assistance consultant).	Completed
Purchase of Sleeve Valves (7234)	For replacing the damaged Chapman Butterfly Valve.	Completed

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$48,739	\$5,760	\$42,979	\$375	\$4,740	\$13	\$1,101	\$41,503

## **Explanation of Changes**

- Project cost change primarily due to updated cost estimates for Shaft 12 Isolation Gate and Quabbin Aqueduct and Winsor Power Station Construction contracts and change orders for Hatchery Pipeline Construction.
- Schedule and spending changed due to updated schedules for Quabbin Aqueduct and Winsor Power Station and Shaft 12 Isolation Gate Construction contracts.

## **CEB Impacts**

• None identified at this time.

# S. 604 MetroWest Water Supply Tunnel

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Fulfills a regulatory requirement
☑ Extends current asset life
☑ Improves system operability and reliability

To provide transmission redundancy for the Hultman Aqueduct ensuring reliable water delivery and providing sufficient hydraulic capacity to support the John J. Carroll Water Treatment Plant and covered storage distribution facilities. This project consists of construction of a 17.6-mile deep rock tunnel from Shaft D in Marlborough to Shaft 5 of the City Tunnel in Weston, and to Shaft W in Weston, as well as the construction of a covered storage facility at Loring Road in Weston. Also included construction of shafts and valve chambers for connections of Shaft 4 in Southborough and to the Norumbega Covered Storage facility.

#### **Project History and Background**

Adequate transmission capacity is a critical component of MWRA's Integrated Water Supply Improvement Program. MWRA's water delivery depends on a system of tunnels and aqueducts that transport water from the Quabbin and Wachusett Reservoirs to the distribution reservoirs in metropolitan Boston. The existing tunnels and aqueducts were deficient in several respects. First, the transmission system was unable to supply sufficient hydraulic capacity during peak flow periods, leading to pressure deficiencies in all high service areas during the summer months. Second, key sections of the transmission system, such as the Hultman Aqueduct and the Southborough Tunnel, relied on a single conduit. In the event of failure of any of the major transmission sections, the remaining waterworks system could not meet the demand for water.

Construction of the MetroWest Water Supply Tunnel and its extension to the Weston Aqueduct Terminal Chamber has provided the critically needed minimum level of transmission redundancy for the Hultman Aqueduct. Enhancements and improvements to the reliability of the City Tunnel and the City Tunnel Extension are being planned as part of the Long-Term Redundancy project. This will also enhance system maintenance by allowing each major supply conduit to be taken out of service for inspection, cleaning, and repair.

In June 1989, MWRA began engineering work on reconstruction of the Sudbury Aqueduct. In May 1990, the Board of Directors directed staff to put minimum effort into further study of the Sudbury Aqueduct reconstruction alternatives and maximum effort into study of the all-tunnel alternative. The advantages of tunneling included a large reduction in surface activities resulting in a reduced environmental impact, and the potential to obtain a large increase in water transmission capacity to enable the tunnel to supplant the Weston Aqueduct as well as provide redundancy to the Hultman Aqueduct. Other advantages included a higher pressure rating by constructing a tunnel deeper into rock, and the ability to construct along a straight line, reducing the overall length of the project by three miles.

In November 1990, the Board of Directors directed staff to eliminate the planned tunnel from Norumbega Reservoir to the Chestnut Hill Reservoir in favor of connecting to Shaft 5 of the City Tunnel and to the eastern end of the Weston Aqueduct. The connection allowed the Weston Aqueduct and Weston Reservoir to be taken off-line and used only for emergency supply as required by the Safe Drinking Water Act.

In December 1995, the Board of Directors authorized solicitation of bids on the first major construction contract of the MetroWest Tunnel project. In June 1996, a notice to proceed was issued on this contract, beginning the transition from design to construction of the project. In November 2003, the tunnel was placed in service.

In September 2005, the Board of Directors authorized an engineering services contract to rehabilitate the existing Hultman Aqueduct and to interconnect the MetroWest Tunnel with the Hultman Aqueduct. In the interim, Valve Chamber E-3 at Southborough was constructed in order to facilitate system operations and the demolition of an existing chlorine building was completed in preparation for construction of the interconnections.

In May 2013 construction was substantially complete on Contract CP6A to interconnect the MetroWest Tunnel with the Hultman Aqueduct and to rehabilitate the Hultman Aqueduct from Shaft 4 in Southborough to Shaft 5 of the City Tunnels and to Shaft W of the MetroWest Tunnel in Weston. A second construction contract (CP6B) was substantially complete to rehabilitate the remainder of the Hultman Aqueduct from Shaft C of the Cosgrove Tunnel to Shaft I of the Southborough Tunnel, and to rehabilitate the top-of-shaft facilities at Shaft 4 of the Southborough Tunnel in Southborough.

#### **Program Elements**

The MetroWest Tunnel is 17.6 miles long with a 14-foot finished diameter. The first segment of the tunnel extends from the water treatment plant site at Walnut Hill on the Marlborough/Southborough line to Shaft 4 of the Hultman Aqueduct in Southborough. From there, the tunnel continues to a "WYE" connection east of Norumbega Reservoir, and continues east from the "WYE" to Shaft 5 of the City Tunnel and northward to the Weston Aqueduct Terminal Chamber. The tunnel depth varies from 200 to 500 feet below ground surface along the alignment.

After the MetroWest Tunnel and the John Carroll Water Treatment Plant were in service, the Hultman Aqueduct was inspected and rehabilitated. Surface distribution facilities, including piping, valve chambers, and risers connect the tunnel to the Hultman Aqueduct and local community services. Intermediate connections between the MetroWest Tunnel and the Hultman Aqueduct permit operation of segments of either the aqueduct or the tunnel interchangeably, allowing flexibility in the maintenance of the two conduits.

Sub-phase	Scope	Status
Study	Study of the aqueduct/tunnel system to determine the best alternative to improve hydraulic capacity and create redundancy.	Completed
Construction-Sudbury Pipe Bridge	Rehabilitation of the Siphon Pipe Bridge at the Weston Aqueduct which experienced significant leakage.	Completed
Design/EIR-Tunnel- Engineering Services During Construction	Environmental impact report (EIR) process and design of the 17.6-mile long, 14-feet diameter tunnel. Construction support services, including environmental and safety compliance, claims assistance, contract administration, quality assurance testing, and community relations.	Completed
Construction: Western Tunnel Segment – CP1	Construction of the western portion of the tunnel and associated surface facilities. Shaft E was constructed at the Sudbury Dam and a tunnel was excavated 4.9 miles to Shaft D, located adjacent to the clear well of the Walnut Hill Water Treatment Plant (WHWTP). A riser shaft has been excavated to connect the tunnel to Southborough's Hosmer Pump Station and includes the surface piping facilities necessary to bring water from the Wachusett Reservoir.	Completed

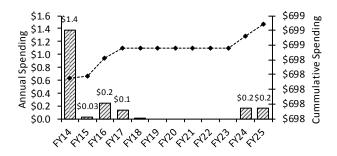

Sub-phase	Scope	Status
Construction: Middle Tunnel Segment – CP2	Construction of approximately 11.9 miles of tunnel between Southborough and Weston. Construction was staged from Shaft L, located at a sand and gravel pit in Framingham, where a permanent connection to the Hultman will be constructed. Along the alignment, four small-diameter shafts have been constructed for community connections to Framingham and Weston. The western reach of the Middle Tunnel Segment portion of the tunnel terminates at Shaft E. The eastern reach terminates at the "WYE" where it meets the East Tunnel Segment. Shafts NE and NW will be constructed on the northwest side of Norumbega Reservoir where surface work included construction of valve chambers and surface piping to allow connections to the Hultman Aqueduct and Norumbega Reservoir. The design at Shaft N included provisions for connections to the Norumbega Covered Storage Facility and the proposed Metropolitan Tunnel Loop.	Completed
Construction: Shaft 5A- CP3	Shaft 5A was excavated near the intersection of Route 128 and the Massachusetts Turnpike.	Completed
Construction: Eastern Tunnel Segment – CP3A	Construction of the eastern portion of the tunnel. An approximately 4,400-feet long, 12-feet finished diameter tunnel was constructed from the Shaft 5A bottom through the "WYE" where it meets the Middle Tunnel Segment and on to Shaft W where a shaft connection to the Loring Road storage tanks was made.	Completed
Construction: MHD Salt Sheds – CP5	Massachusetts Highway Department (MHD) salt storage operations were relocated from the Shaft 5A site to a new, nearby location on MHD property on Recreation Road in Weston. This allowed demolition of the MHD salt sheds at the Shaft 5A site.	Completed
Testing and Disinfection – CP7	Pressure testing of the MWWST from Shaft E (west) to Shaft W and 5A, and disinfection and dechlorination of the entire tunnel from Shaft D to Shafts W and 5A, and final disinfection of the Norumbega Covered Storage tanks. Also included the disinfection and dechlorination of the Wachusett Aqueduct and the piping connections through Walnut Hill to MetroWest Shaft D.	Completed
Construction: Loring Road Covered Storage-CP8	Construction of surface facilities at the Shaft W site included a 20 million-gallon storage facility that replaced the function of the existing Weston Aqueduct/Weston Reservoir system, allowing the system to be taken off-line and placed on emergency stand-by status. The storage facility has been constructed as two concrete tanks partially buried in a hillside adjacent to Shaft W. Connections were made under this contract at Shaft W to two WASM (1 and 2) low service mains and the WASM 4 high service main, as well as to the 7-feet diameter branch of the Hultman Aqueduct. Also included rehabilitation of 4,100 linear feet of 60-inch diameter pipe and four master meters.	Completed
Construction Management/RI	Full inspection of all construction activity, as well as provision of construction support services including environmental and safety compliance, claims assistance, contract administration, quality assurance testing, community relations, labor relations, engineering services during construction, and provision of technical assistance.	Completed

Sub-phase	Scope	Status
Hultman Study	Risk analyses to determine which leaks should be repaired now and a monitoring plan for leaks which presently do not threaten the integrity of the aqueduct.	Completed
Hultman Leak Repair	Test pit excavation and leak repair on the Hultman Aqueduct.	Completed
Hultman Repair Bands	Purchase of external repair bands to be installed as part of Hultman investigation and repair.	Completed
Hultman Investigation and Repair	Evaluation of various segments of the Hultman Aqueduct and installation of repair bands at major leak sites.	Completed
Land Acquisition	Easements along the 17.6-mile tunnel construction route, as well as land at the Shaft W and Shaft L sites.	Completed
Professional Services	Services such as construction safety, contractor audit, legal services, risk management consulting services, and other miscellaneous services.	Completed
Framingham MOU	Agreement to mitigate the impacts of the construction on the Town of Framingham.	Completed
Weston MOU	Agreement to mitigate the impacts of the construction on the Town of Weston.	Completed
Southborough MOU	Agreement to mitigate the impacts of the construction on the Town of Southborough.	Completed
Local Water Supply Contingency Design/CA/RI and Construction	Design and implementation of a Water Supply Contingency Plan including the installation of new local mains where residential well supplies could be affected by tunnel construction.	Completed
Community Technical Assistance	Funds to assist communities with the redesign of utility plans.	Completed
Owner Controlled Insurance	Owner controlled insurance program providing workers' compensation, general liability, and pollution liability insurance for MetroWest Water Supply Tunnel construction.	Completed
Design CA/RI Hultman Interconnect CP6	Design CA/RI of the interconnections between the MetroWest Water Supply Tunnel and the Hultman Aqueduct as well as inspection of the Southboro Tunnel and rehabilitation of the Hultman Aqueduct.	Completed
Construction: Hultman CP9	Construction of Valve Chamber E-3.	Completed
Interim Disinfection	Temporary disinfection related to CP-7 sub-phase.	Completed
Equipment Prepurchase	Pre-purchased one 10-foot diameter butterfly valve for installation in Valve Chamber E3.	Completed
Construction CP6A Lower Hultman Rehab. and 6B Upper Hultman Rehab.	Construction of interconnections between Metrowest Tunnel and the Hultman Aqueduct, and rehabilitation of Hultman Aqueduct including replacement or repair of air relief structures, blow off valves, culverts beneath the aqueduct; replacement of existing valves; and additional items to restore the aqueduct to safe and efficient operation after more than 70 years of service without an overhaul.	Completed
Construction 6A Demolition	Demolition of existing chlorine storage building to allow for construction of a new valve chamber on the Hultman Aqueduct.	Completed

Sub-phase	Scope	Status
CP6 Easements	Easements for CP-6 Contract.	Completed
Valve Chamber and Storage Tank Access Improvements Design (7283) and Construction (7476)	Design and construction to provide better and safer access to valve chambers for Water Quality and Maintenance personnel. Provide secure hatches at Loring Road Tanks.	Future
Shafts 5A/5 Surface Piping Cathodic Protection Construction (7477)	Construction to replace cathodic protection systems.	Completed
Hultman Shaft 5A Leak	Repair Hultman Leak at Shaft 5A.	Completed

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Schedu	Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.	
\$701,189	\$700,184	(\$1,005)	Mar-22	Mar-28	72 mos.	\$4,000	\$0	(\$4,000)	

#### **Explanation of Changes**

- Project cost changed primarily due to transfer of scope of work for the Shaft 5 Electrical work to the Metropolitan Tunnel Interim Improvements project.
- Spending and scheduled changed due to updated schedule due to project priorities for the Valve Chamber and Storage Tank Access Improvements as well as transfer of scope of work for the Shaft 5 Electrical work to the Shaft 5 and 9 Buildings Improvements contract in the Metropolitan Tunnel Interim Improvements project.

#### **CEB Impact**

None identified at this time.

# S. 616 Quabbin Transmission Rehabilitation

#### **Project Purpose and Benefits**

✓ Provides environmental benefits
 ✓ Extends current asset life
 ✓ Improves system operability and reliability

To ensure continued reliable delivery of high quality water to MWRA customer communities through inspection, evaluations, and rehabilitation of the aging transmission system. Many of the transmission facilities and structures were constructed in the 1930s and 1940s and are in need of repair, routine maintenance, updating, and modifications for code compliance, health and safety, and security. Based on the findings and recommendations of this inspection phase, MWRA has and will continue to add design and construction phases to the CIP.

#### **Project History and Background**

This project provided an engineering assessment of key water transmission facilities, structures, and operations. Many of the 44 facilities were constructed in the 1930s and 1940s and are in need of repairs, routine maintenance, and modifications for code compliance, health and safety, and security. The facilities and structures include dams and spillways, structures on tops of shafts, hydraulic diversion facilities, gatehouses, intake buildings, service buildings, and garages. The facilities are spread over a large geographic area ranging from Quabbin Reservoir eastward to the Boston Metropolitan area.

The engineering assessment utilized existing information and site visits to inventory the condition of each facility. The work yielded a facility report that identifies existing conditions and provides recommendations for needed improvements, rehabilitation, and repairs. The project resulted in the development of a conceptual design for each facility including alternatives, basic design criteria, cost estimates, required permits, and schedules. MWRA uses the final conceptual design reports to develop a detailed scope of work for the future procurement of engineering services for subsequent design, construction administration, and resident inspection services. Staff will integrate and coordinate project findings with MWRA's current master planning efforts.

One critical component of the Quabbin Tunnel, the pressure-reducing valves at the Oakdale Power Station, was targeted for immediate replacement. These valves were in poor condition. Due to their important function of reducing hydraulic head to allow water from the Quabbin Reservoir to flow into Wachusett Reservoir, replacement of the Oakdale Valves was a high priority.

Sub-phase	Scope	Status		
Facilities Inspection	Assessment of existing conditions; update of infrastructure rehabilitation evaluation; identification of improvements/repairs/upgrades, establishment of priorities for repairs, and preparation of cost estimates.	Completed		
Oakdale Valves Phase 1	Study, design, and construction for the rehabilitation/replacement of two valves and miscellaneous support equipment at the Oakdale facility.	Completed		
Equipment Pre-Purchase	The two large butterfly valves (84 inch and 72 inch) and the fixed orifice valve (48 inch) that were needed in Phase I Valve Rehabilitation, required 6 to 10 months to fabricate and had to be pre-purchased so the valves were available for installation.			

Sub-phase	Scope	Status
Oakdale Phase 1A Design & Construction	Upgrade the 60 year old Oakdale facility and electrical control systems & the switchyard which are antiquated and unsafe to personnel. Will lower the station service voltage from 2,200 to 480.	Completed
Ware River Intake Valve Replacement Design and Construction	Replace oil-actuated valves currently underwater and inaccessible for maintenance with electric actuated valves. Also, replace siphons with hard piped intakes and automate equipment with remote control capabilities.	Future
CVA Intake Motorized Screen Replacement Construction	Replace current motorized screens on the CVA Intake. One screen has failed. Both have reached the end of their useful life. The screens keep debris from entering CVA. Construction NTP issued on 1/6/17.	Completed
Rehabilitation of Oakdale Turbine Design and Construction	Rehabilitate turbine. Turbine was last rehabilitated in 1986 and we will be approaching thirty years which is the expected life of an overhaul.	Future
Rehabilitate Wachusett Gatehouse/Bastion & Lower Gatehouse Geo- thermal Design/CA/RI and Construction	Rehabilitate the piping in the Lower Gatehouse. Investigate the possibility of simplifying the layout and improving the reliability of the valves. Existing piping and valves are of poor quality. Other piping and valves of the same age in this facility have already been replaced. Replace the leaking roof, gutters, and repair/seal masonry and degraded windows and doors. Sealing of the building will allow more efficient heating of building space to prevent further deterioration. Convert from propane fueled boilers to geo-thermal heating utilizing the internal water in the piping located in the building. The existing heating isn't sufficient to keep building warm enough and therefore remaining moisture contributes to accelerated deterioration.	Future
Oakdale High Line Replacement	Replacement of 70 year old 69kv overhead transmission line and ground operated switch that supplies power and delivers power from the Oakdale Power Station.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

# S. 617 Sudbury/Weston Aqueduct Repairs

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To ensure continued reliable delivery of high quality water to MWRA customer communities through study, design, and implementation of repairs to the Sudbury and Weston Aqueducts. These backup systems are both more than 100 years old, and need to be ready for emergency use.

#### **Project History and Background**

This project includes the inspection of the Sudbury Aqueduct in preparation for future repairs. This aqueduct constructed in 1878 is almost 140 years old and is in need of renewal and upgrade. This is a critical back-up facility for the City Tunnel and the Sudbury Reservoir emergency supply. The inspection phase of the Sudbury Aqueduct was conducted in 2006. The Inspection Report identified several short-term repairs required to better prepare the aqueduct for short-term use. This project will also fund inspections of the Weston Aqueduct which is more than 110 years old. The results of the inspection will allow MWRA to evaluate and prioritize future construction and repair work for this aqueduct.

Sub-phase	Scope	Status
Hazardous Materials	Remove contaminated sediment from aqueduct.	Completed
Sudbury Aqueduct Inspection	Inspection of the Sudbury Aqueduct to identify need for future repair work.	Completed
Ash Street Sluice Gates Design and Construction	Design and construct (rehabilitate) a means to isolate the Weston Reservoir from a break west of Ash Street. Investigate Ash Street and Happy Hollow Siphon. Existing gates in siphon are in need of repair.	Future
Sudbury Short-Term Repairs Phase 1 and 2 Construction	Repairs needed in order to better prepare the Sudbury Aqueduct for short-term use (flow test and emergency activation).	Future
Rosemary Brook Siphon Building Repairs	Repairs to stabilize structures for functional use as emergency water supply facility. Repairs include re-pointing and rebuilding of brick structures and roof replacement. Rosemary Brook Siphon in conjunction with the Sudbury Aqueduct supplies raw water to the Chestnut Hill Reservoir in the event of an emergency.	Completed
Evaluation of Farm Pond Buildings- Waban Arches (7473)	Assessment of historic structures to determine measures to repair and stabilize facilities. Will include Massachusetts Historical Commission review of proposed alternative.	Active

Sub-phase	Scope	Status
Waban Arches Rehabilitation Design (7616) and Construction (7617)	The Sudbury Aqueduct includes two multi-span concrete-lined stone arch bridges, the Echo Bridge and the Waban Arches Bridge. The Waban Arch Bridge extends over Waban Brook in Wellesley. The Waban Arches Bridge is a nine span masonry arch structure that spans 540 linear feet, is 21-ft wide and rises 48-ft above Waban Brook. The bridge is generally in satisfactory condition with minor cracks, water stains, efflorescence and deteriorated mortar joints. The existing railing does not meet safety standards and the anchor rods were found to be broken or deteriorated.	Future
Farm Pond Inlet Chamber & Gatehouse Design (7618) and Construction (7619)	The Farm Pond Inlet Chamber and Farm Pond Gate House are two structures along the Sudbury Aqueduct located on the banks of Farm Pond in Framingham. These structures are in fair to poor condition and are each surrounded with temporary fence to protect pedestrians	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$10,393	\$2,580	\$7,813	\$189	\$2,109	\$51	\$1,150	\$6,475

Project		Status as % is approximation based on project budget and expenditures. Inspection
Status	25.0%	of Sudbury Aqueduct was completed in October 2006. Rosemary Brook Building
12/17		Repair was substantially complete in June 2017. Evaluation of Farm Pond Buildings-
		Waban Arches is on-going.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	FY19 Chge. FY18 FY19		Chge.	
\$6,477	\$10,393	\$3,916	Jul-24	Oct-28	51 mos.	\$3,248	\$1,150	(\$2,098)

## **Explanation of Changes**

- Project cost and schedule changed due to new projects added for Farm Pond Inlet Chamber & Gatehouse Design and Construction and Waban Arches Rehabilitation Design Construction.
- Spending changed due to updated schedule for Sudbury Aqueduct Short-Term Repairs Phase 2 Construction contract due to other project priorities.

#### **CEB Impacts**

None identified at this time.

# S. 621 Watershed Land

#### **Project Purpose and Benefit**

✓ Fulfills regulatory requirement.
 ✓ Provides water quality benefits.
 ✓ Continues to improve public health.

Acquire, in the name of the Commonwealth, parcels of real estate or interests in real estate that are important or critical to the maintenance of water quality in MWRA water supply sources and the advancement of watershed protection.

#### **Project History and Background**

The Watershed Protection Act (WsPA) regulates land use and activities within critical areas of the Quabbin Reservoir, Ware River, and Wachusett Reservoir watersheds for the purpose of protecting the quality of drinking water. Since the passage of the WsPA in 1992, watershed lands had been purchased by the Commonwealth through its bond proceeds. The MWRA was then billed for and, over the years, paid increasing percentages of the debt service on those bonds, eventually reaching 100% of the debt service. MWRA also makes Payments in Lieu of Taxes (PILOT) to each watershed community for the land owned for water supply protection.

Since 1992, land acquisition has evolved into program-status and is a significant component of the Watershed Protection Plans for Quabbin Reservoir/Ware River and Wachusett Reservoir. Land in the watersheds undergoes analysis by the Land Acquisition Panel (LAP), which is comprised of Department of Conservation and Recreation (DCR) and MWRA staff. The LAP analyzes critical criteria for protection of the source water resources, including presence of streams and aquifers, steep slopes, forest cover, and proximity to the reservoirs. Parcels are ranked as to their value to the water supply system and, when the desirable parcels become available, are pursued through the LAP for acquisition through a "friendly taking" in fee or conservation restriction. LAP maintains an active list of parcels to pursue as seller and LAP interest, and funding availability, exist to support acquisition.

Under the revised Memorandum of Understanding between MWRA and DCR, executed April 2004, MWRA will utilize its own bond issuances for the purpose of acquiring, in the name of the Commonwealth, parcels of real estate or interests in real estate for the purpose of watershed protection. At its December 2004 meeting, the MWRA Board of Directors approved the use of MWRA bond proceeds for such purpose.

# S. 622 Cosgrove Tunnel Redundancy

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

To plan, design and construct the recommended redundancy improvements the Cosgrove Tunnel.

#### **Project History and Background**

This project evaluated alternatives and developed conceptual designs and cost estimates to provide redundancy for the metropolitan tunnel system and the Cosgrove Tunnel.

For the western system, the Board of Directors approved the construction of a new pump station to provide redundancy for water supply to the John J. Carroll Water Treatment Plant and to support the shutdown and repair of the Cosgrove Tunnel.

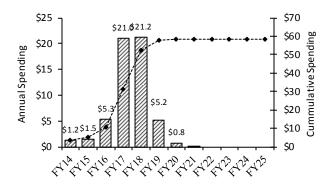

#### Scope

Sub-phase	Scope	Status
Wachusett Aqueduct Pump Station Design/ESDC/RI and Construction (7156/7517)	Design and construction of an emergency pump station to pump water from the Wachusett Aqueduct to the Carroll Water Treatment Plant. Pump station will provide redundancy in the event of a failure at the Cosgrove Tunnel or Intake and for the inspection/rehabilitation of the Cosgrove Tunnel. During a planned or emergency shutdown of the Cosgrove Tunnel, the existing gravity Wachusett Aqueduct with the proposed emergency pump station could deliver approximately 240 million gallons per day (mgd) of raw water to the CWTP for full treatment. The 240-mgd capacity would allow for unrestricted supply for at least eight months during the lower-demand fall/winter/spring period. This project, along with the completed Hultman Aqueduct rehabilitation and interconnections project, will provide fully treated water transmission redundancy from the Wachusett Reservoir to the beginning of the metropolitan distribution system in Weston.	Active

#### Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

# S. 623 Dam Projects

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

#### Master Plan Project ■ 2008 Priority Rating 2 (See Appendix 3)

To evaluate, design, and make necessary safety modifications and repairs to dams for proper operation as a result of the 2004 MOU between MWRA and DCR.

#### **Project History and Background**

Massachusetts Dam Safety Regulations, 302 CMR 10.00, require modifications to the Framingham Reservoir No. 3 (Foss) Dam to provide a spillway system capable of passing the applicable Spillway Design Flood (SDF) or safely storing this same flood within the reservoir without a spillway or other emergency overflow structure. Based on existing Hydraulics and Hydrology studies for Foss Dam, needed improvements may include spillway modifications and/or a parapet wave wall to safely pass the SDF. Dam Safety Regulations may also require dam embankment armoring to protect against overtopping.

All earthen dams and masonry dams under MWRA responsibility were built in the late 1800s to early 1900s and are in periodic need of maintenance. Based on completed internal inspections, repairs are needed including rip rap re-setting and replacement, mitigation of erosion features, and addressing mortar loss and consequent minor leakage at gatehouses are necessary at Foss, Weston, Chestnut Hill, Sudbury and Wachusett Open Channel Lower dams.

Sub-phase	Scope	Status
Dam Safety Modifications and Repairs	Provide Design and ESDC for required Dam Safety Modifications and Repairs. Construct parapet wave walls on dam crests to safely contain the SDF at the Weston Reservoir Dam. At present, alternatives are being evaluated at Foss.	Completed
Quinapoxet Dam Removal Design/ESDC/RI and Construction	Provide final design, ESDC/RI, and construction for the removal of the Quinapoxet Dam adjacent to the Oakdale Pump Station. The removal of the dam will help landlocked fish in the Wachusett Reservoir to reach spawning grounds in the Quinapoxet River.	Future

Sub-phase	Scope	Status
Sudbury/Foss Dam Improvements/Wachusett North Dike Overtopping Protection Design CA/RI and Construction	Regulatory requirement for dam safety compliance for the Sudbury/Foss Dams to ensure spillway will properly function and regulatory requirement for dam safety compliance for the Wachusett North Dike to ensure earthen dam structure will withstand overtopping. Dike requires reconnection of earthen berm around Leominster Pump Station to protect against wave runup/overtopping at the spillway design flood. Area of dike was removed in mid 1960s to build the P.S.	Future

# S. 625 Metropolitan Tunnel Redundancy

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

## Master Plan Project **Ø** 2008 Priority Rating 1 (See Appendix 3)

To plan, design and construct the recommended redundancy improvements to the City Tunnel, the City Tunnel Extension, the Dorchester Tunnel and the Cosgrove Tunnel.

#### **Project History and Background**

This project includes the study, permitting, design, and construction of redundancy improvements to critical elements of the water transmission system. The study phase evaluated alternatives and developed conceptual designs and cost estimates to provide redundancy for the metropolitan tunnel system.

The metropolitan tunnel system was evaluated first with emphasis on providing redundancy for Shaft 7 of the City Tunnel. Historically, the plan for providing redundancy for the metropolitan tunnel system was based on one or more proposed parallel deep rock tunnel loops from the terminus of the Hultman Aqueduct and MetroWest Tunnel in Weston into the metropolitan area. The focus of this study was to develop and evaluate alternative surface pipe improvements, in addition to revisiting previously proposed tunnel loops, to achieve an acceptable level of redundancy at a lower cost.

The tunnels in the Metropolitan Boston area, i.e. the City Tunnel, City Tunnel Extension, and Dorchester Tunnel remain a weak link in the water transmission system. While the integrity of the underground tunnel sections is believed to be good based on very low, unaccounted water levels in the MWRA transmission system, there is still risk of failure mainly due to pipe and valve failures at the surface connections to the distribution system or due to major subsurface failures as a result of earthquakes or geological faults. A rupture of piping or a valve failure at surface connections points on any of the metropolitan area tunnel shafts would cause an immediate loss of pressure throughout the entire High Service area and would require difficult emergency valve closures and lengthy system repairs. The assumption is that tunnels have a useful life of 100 years but these subsurface structures have not been inspected and their actual condition is unknown because they cannot be shut down for inspection. Facilities at the top of tunnel shafts have been examined and a number of hardening measures are needed for risk reduction at these sites. Completion of distribution system storage projects at Blue Hills and the Spot Pond Storage Facility also assist in mitigating the effects of local pipe ruptures.

In the event of a failure of the City Tunnel, a limited amount of water could be transferred through the WASM 3 (scheduled for major rehabilitation) and WASM 4 (rehabilitation completed) pipelines and the Sudbury Aqueduct would need to be brought on-line. Extensive use of the Sudbury Aqueduct/Chestnut Hill Emergency Pump Station and open distribution storage at Spot Pond and Chestnut Hill would be required. Supply would be limited and a boil order would be put in place. Failure of the City Tunnel Extension would be similar with reliance on WASM 3 and open storage at Spot Pond.

The redundancy study was undertaken to recommend a phased program which could be implemented over a period of years. The study reviewed currently proposed MWRA pipeline improvement projects and recommendations as to changes in size and/or alignment to contribute to the objective of transmission redundancy within the metropolitan system.

Additional study of the Metropolitan system has focused on the evaluation of new tunnels for providing redundancy. Several tunnel alternatives have been considered and staff presented a recommended plan to the Board of Directors in the fall of 2016. Staff also presented recommended plan to the MWRA water communities in December 2016. The recommended plan which was approved by the Board in February 2017 includes a deep rock tunnel option for both northern and southern components. The northern and southern components are identified below in the Planning, Design and Construction phases.

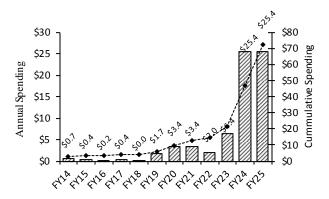

Subsequent Design, Permitting and Construction phases will follow-up on the recommendations of the study. The Design and Construction costs have been updated based on the recommendations of the study. Long-Term Redundancy is one of the MWRA's largest undertakings in the next decade, and a variety of options are still being evaluated.

Sub-phase	Scope	Status
Water Transmission Redundancy Plan (6273)	Evaluation and recommendations of alternatives for long term redundancy.	Completed
Sudbury Aqueduct Pre- MEPA Review & Preliminary Design/EIR (7352)	Study and Pre-MEPA review of the Sudbury Aqueduct as a potential element for providing redundancy in the southern portions of the metropolitan tunnel system. Evaluate alternatives and conduct MEPA review for Sudbury pressurization. Also, includes final design and CA/RI for Rosemary Brook Siphon Buildings repair/stabilization.	Completed
Conceptual Design Environmental Impact Report (7159)	Concept design, permitting and MEPA environmental review of the Northern and Southern Tunnel Loops.	Future
Construction Management (7356)	Constructability review of final documents. Full inspection of all construction activity, as well as provision of construction support services including environmental and safety compliance, claims assistance, contract administration, quality assurance testing, community relations, labor relations, and provision of technical assistance.	Future
Final Design/Engineering Services During Construction (7556)	Final Design and Engineering Services During Construction of the Northern and Southern Tunnel Loops, including connecting mains.	Future
Tunnel Construction (7291)	Construction of the Northern and Southern Tunnel Loops.	Future
Tops of Shafts Connecting Mains Surface Construction (7357)	Construction of Connecting Mains between existing facilities and the various tunnel shafts along the Northern and Southern Tunnel Loops.	Future
Tops of Shafts Rehabilitation Design CA/RI (7521) and Construction (7522)	Design CA/RI and Construction to rehabilitate the Tops of Shafts of the existing tunnel system.	Future
Shaft 7 Buildings Design CA/RI and Construction (7558/7559)	Design and construction of a new access building above the Shaft 7 Top of Shaft structure including new electrical service, HVAC equipment, piping corrosion protection, PRV replacement, new flow meters, and structural and access improvements to the facility.	Future

Sub-phase	Scope	Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$1,404,926	\$3,443	\$1,401,483	\$19	\$1,795	\$1,721	\$17,039	\$1,384,425

# **Metropolitan Tunnel Redundancy**

Project		Status as % is approximation based on project budget and expenditures. An
Status	0.2%	engineering services contract for the Water Transmission Redundancy Plan was
12/17		completed in September 2011. Sudbury Aqueduct MEPA Review was substantially
		complete in June 2017.

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$1,357,686	\$1,404,926	\$47,240	Jun-39	Apr-42	34 mos.	\$95,972	\$17,039	(\$78,933)

#### **Explanation of Changes.**

- Project cost change primarily due to inflation adjustments on unawarded contracts. Other changes include updated cost estimate for Sudbury Aqueduct Massachusetts Environmental Policy Act Review and restructuring Conceptual Design and Public Relations, Legal, Administration cost estimates.
- Schedule change due to Shaft 7 Buildings Design and Construction contracts were re-scheduled to follow all the adjusted tunnel related schedules.

# S. 628 Metropolitan Redundancy Interim Improvements

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Extends current asset life
☑ Results in a net reduction in operating costs
☑ Improves system operability and reliability

Master Plan Project **2** 2008 Priority Rating 1 (See Appendix 3)

To plan, design and construct the recommended interim redundancy improvements to the existing tunnel system, to protect or needed as back-up in case of failure.

#### **Project History and Background**

Design and Engineering Services during construction for four construction contracts that will be completed in the near term while the proposed tunnel redundancy project goes through environmental review, design and construction. These construction projects are needed to protect and improve critical facilities related to the existing tunnel system, or are needed as back-up means of supply in the event that one or more elements of the existing tunnel system fail. The construction projects include the Top of Shafts Interim Improvements, Chestnut Hill Emergency Pump Station improvements, Chestnut Hill Emergency Generator, WASM/Spot Pond Supply Mains PRV Improvements and rehabilitation of WASM 3.

Sub-phase	Scope	Status
Tops of Shafts Interim Improvements Design/CA/RI (7560) and Construction (7561)	This project will provide strengthening of pipe directly connected to the tunnel system, if it is found to be deteriorated, cathodic protection for pipe connections to prevent further corrosion, replacement of faulty air valves directly on the shafts and piping, replacement of nuts on valve connections if found to be at risk, improvements to dewatering systems inside shafts, and installation of additional valves to allow isolation of the tunnel without operating old valves that are directly connected to the tunnel.	Future
Chestnut Hill Emergency Pump Station Improvements Design CA/RI (7574) and Construction (7562)	The Chestnut Hill Emergency Pump Station is in need of improvement to piping and pumping systems to reduce surge loads on the suction and discharge piping during emergency operation when the Dorchester Tunnel is out of service. Discharge pressures from the pump station would exceed normal pressures in community pipelines increasing risk of failure during emergency operation. Also, coordination of pump station operation between Chestnut Hill and Newton Street and Hyde Park pump stations is of concern. With CHEPS not operating, grade lines in the Southern High system fall below acceptable levels at high points in the system and Blue Hills tank is unable to be filled. Improvements under this contract include potential pump and motor replacement, pipe reconfiguration, surge controls, and possibly installation of variable frequency drives on motors to regulate discharge pressures.	Future

Sub-phase	Scope	Status
Chestnut Hill Emergency Pump Station Emergency Generator Construction (7566)	Construction for the Chestnut Hill Emergency Pump Station Emergency Generator and electrical connections.	Future
WASM 3 Rehabilitation MEPA/Design CA/RI (6539) and WASM 3 Rehab CP- 1(6544), CP-2 (6543) and CP-3 (6545)	MEPA/Design CA/RI and construction of the WASM 3 rehabilitation from the Hultman Aqueduct Branch in Weston to the existing PRV chamber near Section 12 at Medford Square. Construction will include cleaning and cement mortar lining, some sliplining and some pipe replacement.	Active/Future
WASM/Spot Pond Supply Mains West PRV Design CA/RI (7575) and Construction Improvements (7563)	This project was developed as a phase of contingency planning until the new tunnel system is in place. The project will allow the Low Service system to be utilized to increase the supply to the Gillis Pump Station in Stoneham to avoid the need to pump out of the Spot Pond Reservoir in an emergency. The Low Service pipelines would be operated at grade lines consistent with WASM 3 grade line to push additional flow to the Gillis Pump Station in an emergency. Low Service revenue meters would require pressure reducing valves to lower pressures to communities along the way. In addition, PRV's on WASM 3/4 would also require replacement to maximize the supply to the north.	Future
Shafts 5 and 9 Building Improvements Design/CA/RI and Construction (7599/7600)	Electrical and architectural improvements at Shafts 5 & 9 buildings in Weston and Somerville.	Future
Section 101/Waltham Section Design CA/RI and Construction (7547/7457)	Design Construction Administration/Resident Inspection and Construction of 8,800 linear feet of a new connection to Waltham from the Northern Extra High Service Area.	Future
Commonwealth Avenue Pump Station Improvements Design CA/RI (7523) and Construction (7524)	Design, engineering services during construction, resident engineering/inspection services and construction to provide improvements to the Commonwealth Avenue Pump Station. The project includes new pipe connections to the Low Service Pipes and two new pumps (one replacement and one additional) for redundancy. Also, includes Supervisory Control and Data Acquisition (SCADA) controls, new electric switchgear, electric transformers, and heating, ventilation and air conditioning equipment to replace older equipment.	Active/Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$194,629	\$913	\$193,716	\$1,064	\$1,978	\$5,251	\$108,591	\$84,060

## Metro Redundancy Interim Improvements

Project		Status as % is approximation based on project budget and expenditures. WASM 3
Status	0.9%	MEPA/Design CA/RI commenced in July 2013. Commonwealth Avenue Pump Station
12/17		Improvements Design CA/RI was awarded in November 2016.

## Changes to Project Scope, Budget, and Schedule

	Project Cost	Scheduled Completion Date			FY19-23 Spending			
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$180,731	\$194,629	\$13,898	Jun-27	Dec-27	6 mos.	\$114,161	\$108,591	(\$5,570)

#### **Explanation of Changes**

- Project cost changed due to updated cost for Weston Aqueduct Supply Mains/Spot Pond Supply Mains PRV
  Design Construction Administration/Resident Inspection and Construction, Shafts 5 and 9 Buildings, and
  inflation adjustments on unawarded contracts.
- Project schedule shifted due to updated WASM 3 and Chestnut Hill Emergency Pump Station Improvements, partially offset by the updated costs listed above, and accelerated schedules for Section 101/Waltham Section contracts.

## **CEB Impacts**

# S. 630 Watershed Division Capital Improvements

### **Project Purpose and Benefit**

☑ Extends current asset life
 ☑ Fulfills regulatory requirement
 ☑ Improves system operability and reliability
 ☑ Continues to improve public health

To renovate an aging Quabbin Administration Building complex to address existing code or operational deficiencies, energy efficiency, employee and public access. Also, to comply with regulatory requirements by Massachusetts Department of Environmental Protection related to Quabbin Administration Buildings water and wastewater systems.

#### **Project History and Background**

DWSP Quabbin/Ware Region facilities support a staff of approximately 80 employees, and provide recreational opportunities and services to more than 500,000 visitors annually to the reservoir.

Construction of the QAB was completed in 1938 and it is not uncommon to find original system controls still operational today (77 years). One of the more pressing needs is the rehabilitation of critically important utilities and support systems that both distribute power and water throughout the facility. Most of these system components are exhibiting signs of deterioration (e.g. wiring, plumbing, heating) and preemptive actions are necessary to avoid catastrophic failures.

The significant investment of capital into the restoration of the facility will also trigger necessary upgrades to satisfy today's more stringent standards for Universal Access, public safety and occupational standards. Example of possible Code induced upgrades may include added environmental safeguards for occupational safety (e.g. ventilation and hazard abatements), installation of fire alarms and expanded fire protection systems, universally accessible access routes to and from the building and special accommodations (e.g. elevator, public restrooms).

Mechanical control systems for the distribution of steam throughout the Complex are very old, antiquated systems that need modernization to ensure continued reliable operation. Many components also fail to satisfy current building code requirements and would require upgrading.

As discussed above in the Quabbin Administration Building Complex: Major Renovations Project, there are many building components that need work. Two issues that need immediate attention are the boiler room wastewater discharges and the leaking water system. In 2013, the Quabbin Administrative Building (QAB) water supply system came under scrutiny by the MA Department of Environmental Protection and the State Plumbing Inspector. DEP is requiring that floor drains located inside of the buildings boiler room be abandoned and that daily well withdrawal levels be brought down to acceptable levels. Also, in 2014 wastewater discharges from the MWRA laboratory inside of the QAB facility were authorized by the DEP under the condition that daily wastewater flows be verified and shown to be within approved limits. The DWSP has initiated monitoring of wastewater flows from the QAB facility and anticipates that future upgrades to the septic system will be needed. In order to satisfy these mandates, significant investments are needed to retrofit existing mechanicals and make significant improvements to the distribution of water and handling of wastewater throughout the building immediately.

These improvements will be needed no matter what form of Quabbin Administration Building renovations are determined to be needed under the larger capital project. These two issues are essentially "fast-track" components on the larger project needed for regulatory compliance. Using professional engineering consultants, DCR will have complete repair designs by end of June 2016. The water/wastewater work included in this Fast Track project will be completed in FY17.

## Scope

Sub-phase	Scope	Status
Quabbin Administration Building Rehabilitation Conceptual Design Report, Design/Construction Administration and Construction	Design and Construction for improvements at the Quabbin Administration Building.	Future
Quabbin Maintenance Garage/Wash Bay/Storage Building Construction	Installation of a modular building in stockroom area off Blue Meadow Road for large vehicle maintenance, washing, and equipment storage. Includes demolition of old sheds, conversion of underground storage tank to above ground storage tank, paving and security.	Future

## Expenditure Forecast (in \$000s) and Project Status

\$17,300	\$17,300	\$0	Jul-23	Mar-25	20 mos.	\$16,540	\$3,950	(\$12,590)

## **Explanation of Changes**

• Project schedule and spending changed due to updated plan for Quabbin Administration Building Conceptual Design, Design/Construction Administration and Construction contracts.

## **CEB Impacts**

# S. 618 Peabody Pipeline Project

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

The proposed new pipeline and meter will serve the western side of town that is currently served by the Winona WTP and also provide a redundant connection to the city's water distribution system. The City estimates that their MWRA water supply would increase from 1.1 MGD to 2.5 MGD.

## **Project History and Background**

Peabody is a partially supplied MWRA water community. Peabody's drinking water is mainly supplied by the Coolidge and Winona Water Treatment Plants. Raw water from the Ipswich River is pumped to Suntaug Lake and Winona Pond. Water from Winona Pond is treated at the Winona Water Treatment Plant (Winona WTP) and water from Suntaug Lake and Spring pond are treated at the Coolidge Water Treatment Plant (Coolidge WTP). Peabody supplements it's drinking water through an existing MWRA connection, Meter 168.

Peabody's Winona WTP, constructed in 1974, has reached the end of its useful life. The city has decided to purchase more water from the MWRA instead of making the capital investment in rebuilding the aging water treatment plant. A new pipeline and meter is proposed which will serve the western side of town that is currently served by the Winona WTP and will also provide a redundant connection to the city's water distribution system.

The proposed 11,450 ft., 24-inch diameter water pipeline will extend the MWRA's Section 109 from the Lynnfield/Saugus town line to the Peabody/Lynnfield town line on Route 1.

## Scope

Sub-phase	Scope	Status
Peabody Pipeline Design/ESDC/REI (6895) and Construction (6893)	This phase includes the design and construction of an 11,450-linear foot, 24-inch diameter water pipeline that will extend MWRA's Section 109 from the Lynnfield/Saugus town line to the Peabody/Lynnfield line on Route 1.	Active

#### Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## **Explanation of Changes**

• Peabody Pipeline Design/Engineering Services During Construction/Resident Engineering Inspection was awarded slightly less than budget.

## **CEB Impacts**

# S. 677 Valve Replacement

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Provides environmental benefits
☑ Fulfills a regulatory requirement
☑ Extends current asset life
☑ Improves system operability and reliability

To replace, repair or retrofit approximately 500 blow-off valves and several hundred main line valves within the pipeline distribution system. Blow-off valve retrofits eliminate cross-connections into sewers or drainage piping. Main line valve replacements improve MWRA's ability to respond to emergency situations such as pipe breaks and provide tight shutdown for pipeline construction projects. Faster response reduces negative impacts on customers. Combining the two valve replacement efforts reduces the need for repeat construction at sites and alleviates traffic impacts, re-paving needs, and other site-specific issues.

#### **Project History and Background**

MWRA owns and operates nearly 300 miles of distribution pipeline which contain approximately 1,578 blow-off valves and 1,713 main line valves. Some blow-off valves are cross-connected into sewers or drainage piping. To ensure there is no chance of contamination, DEP requires retrofitting of the blow-off valves to provide air gaps to ensure that non-potable water cannot reach the potable water lines. In addition, many of the main line valves in the system are significantly beyond their original design life. Many of these are either inoperable or inadequate and require replacement, repair, or retrofitting.

However, significant progress has been made in the last several years in correcting the cross connections at the blow-offs and in replacing defective main line valves and adding new valves to improve operations throughout the system. The valve replacement program continues this process. MWRA utilizes in-house crews and outside contractors to replace several blow-off and main line valves every year, both as part of the Valve Replacement Program and pipeline rehabilitation contracts.

Sub-phase	Scope	Status
Design/Phase 1	Design of valve replacements, setting priorities based on the level of urgency or risk associated with each valve and scheduling work on valves that would not otherwise be replaced during upcoming pipeline rehabilitation projects.	Completed
Construction - Phase 1 (5126)	Purchase and installation of 27 blow-off valve retrofits.	Completed
Construction - Phase 2 (6105)	Purchase and installation of 10 blow-off valve retrofits and 10 main line valve replacements.	Completed
Construction - Phase 3 (6278)	Purchase and installation of 10 blow-off valve retrofits and 12 main line valve replacements as well as rehabilitation of two meters.	Completed

Sub-phase	Scope	Status
Construction - Phases 4, 5 & 6 (6345, 6346, 6435)	For each phase, purchase and install blow-off valve retrofits and main line valve replacements and rehabilitation of miscellaneous meters. Phase 4 Contract included 12 main line valves, 10 blow-off retrofits, 2 check valves and the rehabilitation of 2 meters. Phase 5 Contract included 10 blow-off valve retrofits and 13 main line valve replacements. Phase 6 included 4 blow-off valve retrofits, 8 main line valve replacements and 9 globe valves (tank isolation).	Completed
Construction Phases 7, 8 & 9 (6436, 7195, 7236)	For each phase, purchase and install blow-off valve retrofits and main line valve replacements and rehabilitation of miscellaneous meters. Each phase includes approximately 10 blow-off valve retrofits and 10 main line valve replacements.	Completed/Future
Design CA/RI Phases 8 & 9 (7417, 7418)	Design/Contract Administration/Resident Inspection for construction Phases 8 and 9.	Future
Equipment Purchase (6088)	Purchase of approximately 20 main line valves per phase for ten phases for replacement work to be done by in-house staff. Also includes the cost of line stops associated with this work.	Completed

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$21,402	\$12,016	\$9,385	\$0	\$0	\$0	\$0	\$9,386

Project		Status as % is approximation based on project budget and expenditures. Phases 1-6
Status	56.1%	are complete. Phase 7 was completed in April 2013.
12/17		

## Changes to Project Scope, Budget, and Schedule

## **Explanation of Changes**

- Project cost changed due to inflation adjustments on unawarded contracts.
- Schedule and spending changed due to project priorities.

## **CEB Impacts**

# S. 692 Northern High Service – Section 27 Improvements

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To rehabilitate/replace a segment of pipe originally installed in 1898 in Lynn which suffers from poor hydraulic performance and frequent leakage. Rehabilitate/replacement of approximately 7,200 linear feet of pipeline will improve service to the communities north of Lynn.

## **Project History and Background**

Section 27 is a 12–20 inch diameter cast iron main installed in 1898 that serves the communities north of Lynn. The main has become severely corroded. As a result of this deterioration, various major leaks have occurred since 1966. Because the main runs under major thoroughfares in Lynn, repair of leaks is disruptive and costly. Appropriate corrosion control methods will be employed on the pipeline to minimize corrosion potential in Section 27. During preliminary design, an evaluation determined MWRA should abandon the portion of Section 27 that parallels Section 91 and an adjacent pipeline, Section 35.

## Scope

Sub-phase	Scope	Status
Construction Section 27 (6333)	Rehabilitation/replacement of 7,200 linear feet of pipeline to replace severely corroded pipe.	Future

## **Explanation of Changes**

- Project cost change due to inflation adjustments on unawarded contracts.
- Project schedule and spending changes due to updated schedule for Section 27 Construction due to other project priorities.

## **CEB Impacts**

# S. 693 Northern High Service - Revere and Malden Pipeline Improvements

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To improve the delivery capabilities of major distribution lines serving the Northern High System. The existing pipelines are inadequate and suffer from extensive corrosion and leakage. Replacement, rehabilitation, and/or reinforcement will provide a strong and reliable means to convey water from the City Tunnel Extension to communities in the northern and eastern portions of the Northern High Service Area.

#### **Project History and Background**

The southeast corner of the Northern High Service Area has experienced pressure deficiencies because of undersized pipes and extensive pipeline corrosion. The corrosion problems have led to numerous leaks and pressure deficiencies which can cause fire-fighting difficulties. These deficiencies particularly affect Malden, Revere, Lynn, Winthrop, Deer Island, East Boston, Saugus, Nahant, Peabody, Marblehead, and Swampscott. To correct these problems, MWRA is implementing a series of pipeline improvements.

This project includes installation of pipeline on Sections 97, 97A and 68 in Revere and Sections 49, 53, 53A and Shaft9A-D in Malden; rehabilitation of Sections 53 and 55 in Revere; and installation of control valves to improve water pressure. All the work for this project, with the exception of the design and construction of Section 53 connections and Section 53A, Section 68 and the Shaft 9A-D Extension is complete. Completion of this construction will improve the pressure and flow of water conveyed to the Northern High Service Area.

A hydraulic study of the distribution system recommended that MWRA install a new pipeline in Revere, beginning at the Everett/Chelsea/Revere border and extending through Revere to the East Boston border. This new pipeline runs parallel with existing pipelines and carries a large portion of the flow formerly carried by the existing system, thereby increasing water pressure and flow to Revere, East Boston, Winthrop, and Deer Island, particularly during periods of high demand. Installation of new control valves was required to regulate water pressure and fill the Winthrop standpipe. The original control valves between Winthrop pipelines and MWRA transmission mains were inadequate. Fluctuations in pressure threatened to rupture the town's pipelines. More efficient valves were required to eliminate the danger. Flow tests performed on Sections 32 and 55 of the existing Revere and Winthrop pipelines revealed that these sections had severe flow problems. The pipelines were only able to carry a fraction of the designed capacity because of internal corrosion. Cleaning and lining the pipelines restored flow capacity.

Section 53 in Malden and Revere was an 18,900-feet long, 30-inch diameter steel pipeline, exceeding 60 years of age. Workers dug four test pits to determine the condition of this pipeline and uncovered 18 holes in the pipe. Investigations into recent failures revealed severe corrosion through the pipe wall in several locations. Replacement of the Malden portion of Section 53 with a new 48-inch diameter pipe has been completed. The Revere portion of Section 53 has been sliplined with 24-inch diameter steel pipe. In addition to feeding into the new 48-inch Saugus/Lynn pipeline, this pipe plays an important role in the supply network for Deer Island. Sections 49 and 49A, old 24-inch pipelines, are used to connect Section 53 to Shaft 9A of the City Tunnel. They are undersized for this purpose and are a severe restriction. A new 3,500-lf, 48-inch diameter pipe (proposed Section 53A) is needed to reinforce Sections 49 and 49A. A 1,000-lf, 20-inch diameter pipe, portion of Section 68, interconnects Section 53 with the new Saugus/Lynn pipeline. This section is undersized and needs to be reinforced with 1,000 lf of new 48-inch diameter pipe to improve hydraulic capacity. Approximately 4,000 lf of Section 14, an existing 30-inch diameter cast-iron pipe installed in 1916, will be cleaned and cement mortar lined to improve

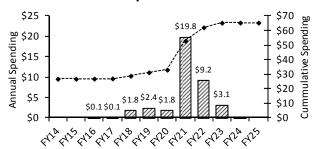

redundancy for Section 84. The Shaft 9A-D Extension will provide a more reliable connector from Shaft 9A of the City Tunnel Extension to the Section 99 pipe that serves as the suction line to the Gillis Pump Station.

Sub-phase	Scope	Status
Design/CS/RI – Revere/Malden	Design, construction services, and resident inspection for Section 53 in Malden and Sections 97 and 97A in Revere.	Completed
Construction Revere Beach (5186)	Installation of 5,491 linear feet of 36-inch pipeline and 10,111 linear feet of 30-inch pipeline on Section 97, as well as 3,872 linear feet of 24-inch pipeline, and 1,350 linear feet of 20-inch pipeline on Section 97A in the vicinity of Revere Beach Parkway.	Completed
Construction Malden Section 53 (5176)	Installation of 11,907 feet of 48-inch diameter pipeline in Malden on Section 53.	Completed
Construction Linden Square (5238)	Construction and construction administration of a 1,000 linear feet segment of Section 53 in the Linden Square area of Malden. The Massachusetts Highway Dept constructed this section as part of its roadway reconstruction project around Linden Square.	Completed
Construction Revere Section 53 (5177)	Rehabilitation of 4,900 linear feet of 30-inch pipe in Revere on Section 53 and replacement of 1,500 linear feet under Route 1 in Revere.	Completed
Construction Road Restoration	Design, construction administration, and construction of the full road restoration to ensure a stable road surface without cracking on Eastern Avenue in Malden in compliance with the requirements of the Massachusetts Architectural Access Board. The City of Malden will do this work.	Completed
Construction Control Valves (5191)	Installation of control valves needed to regulate water pressure and fill the Winthrop standpipe.	Completed
Construction DI Pipeline Cleaning & Lining (5179)	Design and cleaning and lining of the 2,000 linear feet, 8-inch diameter water supply main to Deer Island.	Completed
Construction – Winthrop C&L (5178)	Rehabilitation of 7,900 linear feet of 16-inch diameter pipe on Section 32 and 20-inch diameter pipe on Section 55 in Revere and Winthrop.	Completed
Section 53 and 99 Connections Design CA/RI (7485)	Water Supply Plan Design, Construction Administration, Resident Inspection for Sections 53 and 99 Connections.	Future
Construction Section 53 Connections (6335)	Final Design, Construction Administration, Resident Inspection, and Construction of 1,000 linear feet of new 48-inch pipe in Revere and 4,500 linear feet of new 48-inch pipe in Malden plus rehabilitation of 4,000 lf of Section 14. These proposed pipelines will eliminate hydraulic restrictions and better integrate Section 53 into the Northern High distribution system.	Future
Section 99 Connections Construction (6958)	Construction of approximately 3,000 linear feet of new 60-inch diameter pipeline in Malden connecting the Shaft 9A-D line (60-inch dia.) to Section 99 (72-inch dia.).	Future

Sub-phase	Scope	Status
Section 56 Repl./Saugus River Feasibility Study (7500), Design CA/RI (7454) and Construction (7486)	Feasibility Study, Design CA/RI, and Construction to replace failed 20/30-inch diameter steel water main crossing of the Saugus River by trenchless methods. Main was installed in 1934 and is out of service. This main provides redundancy to Section 26 which is currently also out of service.	Active/Future
Section 56 Demolition Design CA/RI (7535) and Construction (7536)	Section 56 Design, Construction Administration/Resident Inspection and Construction Pipe Demolition at General Edwards Bridge.	Future
Section 14 Pipe Relocation (Malden) (6957)	Abandon 540 If of existing Section 14 water main in Malden Center and replace with 400 feet of new 36-inch ductile iron water pipe in a new alignment. A 36-inch gate valve will also be installed as well as a blow-off setup.	Active
Sections 13 & 48 Rehabilitation Design CA/RI and Construction (7602/7603)	Malden meters 16 and 187 and Medford meters 65 and 159 are connected to the distribution system via Sections 13 and 48. These four meters supply areas of the two communities at a generally higher elevation than the remaining community meters. Sections 13 and 48 are unlined cast-iron and steel water mains, respectively. Portions of these mains were disconnected from the Fells Reservoir in 1988 due to hydraulic and water quality problems. Rehabilitation of Section 13 (7,300 lf of 36-inch cast-iron 1896 vintage pipe) and Section 48 (7,300 lf of 38-inch diameter and 1,400 lf of 30-inch diameter riveted steel 1929 vintage pipe) in Stoneham, Malden and Melrose from the Gate House at Fells Reservoir partially along Highland Avenue to Pleasant Street and Charles Street will improve hydraulics and water quality.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$79,674	\$27,058	\$52,616	\$1,535	\$1,760	\$2,712	\$30,231	\$20,850

## NHS - Revere & Malden Pipeline Improvements

Project		Status as % is approximation based on project budget and expenditures. Revere
Status	34.5%	Beach, Malden Section 53, Revere Section 53 Construction and Linden Square
12/17		construction are complete. Section 56 Feasibility Study was substantially complete in
		June 2017. Section 14 Pipe Relocation – Malden was awarded in June 2017.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18 FY19		Chge.
\$65,373	\$79,674	\$14,301	Aug-22	Jul-28	71 mos.	\$36,409	\$30,231	(\$6,178)

#### **Explanation of Changes**

- Project cost change primarily due to new project added for Section 13 & 48 Design Construction Administration/Resident Inspection and Construction. Also, updated cost estimates for Section 56 Pipe Demo Construction and Section 56 Replacement/Saugus Design Construction Administration/Resident Inspection, as well as award for Section 14 Water Pipeline Relocation (Malden) was greater than budgeted.
- Spending changed due to updated schedules for Section 53 and 99 Connections Design/Construction Administration/Resident Inspection and Construction, partially offset for updated cost estimates for Section 56 Pipe Demo Construction and Section 56 Replacement/Saugus Design Construction Administration/Resident Inspection.
- Schedule changed due to new project added for Section 13 & 48 Design Construction Administration/Resident Inspection and Construction.

## **CEB Impacts**

# S. 702 New Connecting Mains - Shaft 7 to WASM 3

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To provide redundancy and improve the reliability of WASM 3; provide hydraulic looping and redundancy, enable Intermediate High Sections 59 and 60 to be taken off-line for rehabilitation, and improve water quality by reducing the length of unlined cast iron water mains in the MWRA system. Completion of this project will help provide the basis for a strong hydraulic network of piping among WASM 3, WASM 4, and the City Tunnel. The future conversion of Sections 23 and 24 to the Intermediate High Service system to create a unified Intermediate High Service area connecting the Belmont and Commonwealth Avenue pump stations will also be possible.

#### **Project History and Background**

WASM 3 is a 56-inch to 60-inch diameter lock-bar steel pipe installed in 1926 and 1927. It is connected to the MetroWest Tunnel and Hultman Branch at the west end and the City Tunnel Extension at its east end. It extends from Weston through Waltham, Belmont, Arlington and Somerville to Medford. Most of its flow comes from the MetroWest Tunnel Shaft W, with peak flow of 57 million gallons per day. A lesser amount enters the main from the City Tunnel Extension Shaft 9. Upon completion of the Hultman Aqueduct and its interconnection to the Weston Aqueduct Terminal Chamber in 1941, WASM 3 became part of the High Service system. There are no connecting mains along the length of this 11-mile pipeline, and no other means available to adequately supply the nine communities it serves. WASM 3 serves communities northwest of Boston and is the sole source of supply to the Northern Extra High Service Area (Bedford, Lexington, Waltham, Arlington, and Winchester) and the Intermediate High Service Area (Belmont, Arlington, and Watertown). It also supplies a portion of the Northern High Service Area (Waltham, Watertown, Belmont, Arlington, Medford, and Somerville), and is a means of supplying the Spot Pond Supply Mains and Reservoir. WASM 3 serves a population of more than 250,000.

A break almost anywhere on this pipeline would result in severe service disruptions in Waltham, Watertown, Belmont, Arlington, Lexington, Bedford, and Winchester. Virtually no water would reach Waltham if a break were to occur at the west end of the pipeline; water normally supplied through the Shaft W connection would be forced through the Shaft 9 connection, increasing flows and reducing hydraulic grade lines in WASM 3, the City Tunnel, and City Tunnel Extension. The lack of redundancy also makes routine cleaning and lining of the 90± year old pipeline impossible. The need for maintenance is indicated by a significant number of leaks, particularly on the most vulnerable west end, which are the result of corrosion pitting through the pipe wall, as well as by the reduced carrying capacity of the line.

Completion of this project will facilitate conveyance of high service water from Shaft 9 of the City Tunnel Extension to WASM 3. This will be accomplished by rehabilitating existing mains between the City Tunnel Extension and WASM 3.

Previously proposed portions of this project have been eliminated or placed on hold until the Long-Term Redundancy study is completed. Specifically, the proposed new 48-inch diameter pipe through Newton and Waltham has been eliminated. The rehabilitation of Sections 23, 24, and 47 will proceed.

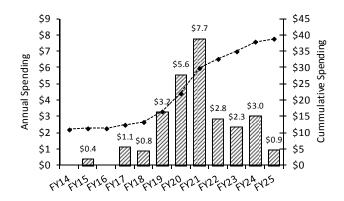

## Scope

Sub-phase	Scope	Status
Watertown MOU	Payment to the City of Watertown to fund a portion of its Galen Street project to replace an existing 10-inch diameter pipeline with a new 12-inch diameter water main.	Completed
Routing Study (5163)	Identification of alternatives to determine the optimum approach for providing additional strong connections to WASM 3.	Completed
Design/CA/RI-DP1 (6383)	Design, construction administration and resident inspection services for a new 48-inch pipeline to interconnect WASM 3 with WASM 4 (CP-1). This design work was terminated based on the recommendation of the Long Term Redundancy Study.	Completed
Design DP2/4 Meter 120 (6384)	Design services for Section 47 from Meter 120 to WASM4. Construction Administration and Resident Inspection services to be performed by inhouse staff.	Completed
CP2 C&L Sections 59 & 60 Construction (6548)	Cleaning and lining of 16,400 linear feet of 20-inch diameter pipe on Sections 59 and 60 (Intermediate High) from Section 25 in Watertown to Meter 121 in Arlington.	Future
Design/CA/RI and Construction Section 23, 24, 47 (6385/6392)	Cleaning and lining of 21,950 linear feet of 20-inch diameter pipe (Sections 24 & 47) and 5,800 linear feet of 36-inch diameter pipe (Section 23).	Active/Future
NE Segment CP5 (6394)	Rehabilitation of 15,000 linear feet of 20 and 48-inch diameter pipe for Sections 18, 50, and 51 for the Northeast Segment plus Meter 32 replacement.	Completed
Design, CA/RI for Sections 25, 75, 59 & 60 (6955)	Design/Construction Administration/Resident Inspection services for replacement of Sections 25, extension of Section 75, and rehabilitation of Sections 59 & 60 pipelines.	Future
Section 25 Replacement Construction (6956)	Replacement of existing Section 25 (approximately 4,800 linear feet of existing 16" pipe) with a new 20-inch diameter pipeline.	Future
Section 75 Extension Construction (7484)	Addition of approximately 6,000 feet of new 30-inch diameter pipe to extend Section 75 easterly to Section 23 in Newton, to provide a redundant feed to the Intermediate High Service area supplying Arlington, Belmont and Watertown which also requires replacement of Section 25 under construction Contract 6956, above.	Future

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$44,732	\$12,268	\$32,463	\$726	\$2,033	\$2,849	\$22,179	\$9,559

## **New Connecting Mains**

Project Status 12/17	27.8%	Status as % is approximation based on project budget and expenditures. Northeast Segment CP-5 construction contract was completed in November 2011. Design of CP3 (Sections 23, 24 & 47) commenced in August 2016.

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$38,841	\$44,732	\$5,891	Jun-24	Dec-25	18 mos.	\$21,691	\$22,179	\$488

#### **Explanation of Changes**

- Project cost change primarily due to updated cost estimates for CP2 Clean & Line Sections 59 & 60 Construction, Replacement of Section 25 Construction, and Sections 25, 75, 59 & 60 Design CA/RI. Also, inflation adjustment for CP3 Section 23,24,47 Rehabilitation.
- Schedule changed due to revised schedule for CP2 Clean & Line Sections 59 & 60 due to added scope
- Spending changed due to updated cost estimates for Replacement of Section 25, inflation adjustment for CP3
  Section 23,24,47 Rehabilitation, and updated cash flow for CP3 Section 23,24,47 Design/Construction
  Administration/Resident Inspection and Construction, partially offset by updated schedule for CP2 Clean &
  Line Sections 59 & 60 Construction contract.

## **CEB Impacts**

# S. 704 Rehabilitation of Other Pump Stations

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Extends current asset life
 ☑ Results in a net reduction in operating costs
 ☑ Improves system operability and reliability

To rehabilitate five active pump stations (Brattle Court, Reservoir Road, Hyde Park, Belmont, and Spring Street) - each of which is more than 40 years old and is overdue for renewal for safety, reliability, and efficiency reasons. Project includes a future phase to rehabilitate Gillis, Newton Street, Lexington Street, and Commonwealth Ave pump stations.

#### **Project History and Background**

MWRA's waterworks distribution system includes ten active pump stations. Extensive rehabilitation of the James L. Gillis, Newton Street, Lexington Street, and Commonwealth Avenue pump stations was completed 20 years ago.

The Brattle Court, Reservoir Road, Hyde Park, Belmont, and Spring Street pump stations were built in 1907, 1936, 1937 and 1958, respectively and were overdue for major rehabilitation. The Brattle Court Pump Station serves the towns of Arlington, Lexington, Waltham, and Winchester. The Reservoir Road Pump Station serves Brookline. The Hyde Park Pump Station serves Boston, Milton, Norwood, Canton, Dedham, Westwood and Stoughton. The Belmont Pump Station serves Belmont, Arlington, and Watertown. The Spring Street Pump Station serves Lexington, Bedford, part of Waltham, Belmont, Arlington, and Winchester. Some equipment at each pump station were inoperable, and system demand patterns had shifted during the life of the stations, requiring adjustments to pumping capacity. In addition, station improvements have not kept pace with changes in building and safety codes.

MWRA has divided construction for these five pump stations into two contracts. The first contract (Construction - Interim Automation), based on a fast-track design was completed in February 2001, involved installation of Supervisory Control and Data Acquisition (SCADA) systems at each station. Under the second construction contract, MWRA completed rehabilitation of the five pump stations (Brattle Court, Reservoir Road, Hyde Park, Belmont, and Spring Street). The second construction contract was awarded in October 2006 and was substantially complete in June 2010.

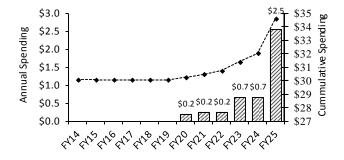

The next phase will be to rehabilitate the Gillis, Newton Street, and Lexington Street pump stations. The Commonwealth Avenue Pump Station rehabilitation is included in Metropolitan Redundancy Interim Improvements project.

Sub-phase	Scope	Status
Preliminary Design (5153)	Planning and conceptual design including inspection and evaluation of the HVAC systems, buildings, pipes, valves, and other systems at the pump stations; determination of the need for improvements; and preparation of a conceptual design report.	Completed
Design 1/CA/RI (6110)	Design, Construction Administration and Resident Inspection for rehabilitation of five pump stations, including installation of SCADA systems.	Completed
Construction II and C (6304)	Installation of instrumentation at five pump stations to enable remote operation and monitoring.	Completed

Sub-phase	Scope	Status
Rehab of 5 Pump Stations (6375)	Rehabilitation of Brattle Court, Reservoir Road, Hyde Park, Belmont, and Spring Street pump stations, including installation of new mechanical, electrical, instrumentation, and security systems, and building and site refurbishment, and SCADA installation.	Completed
Proprietary Equipment Purchases (6676)	Purchase of proprietary materials for SCADA system for Interim Instrumentation and Control.	Completed
Design 2 CS/RI (6980)	Final Design, construction services, and resident inspection for rehabilitation of five pump stations.	Completed
Pump Station Rehabilitation Evaluation (7525), Design CA/RI (7526) and Construction (7527)	Rehabilitation of the Gillis, Newton Street, and Lexington Street pump stations. The pumps in these stations are over 20 years old and maintenance of the existing units will be an issue mostly due to availability of replacement parts. More efficient units will be installed based upon age and life of the equipment. Lexington Street is the only pump stations for its respective service area.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$50,258	\$30,058	\$20,200	\$0	\$0	\$0	\$1,321	\$18,879

## Rehab of Other Pump Stations

Project		Status as % is approximation based on project budget and expenditures. Construction
Status	59.8%	rehabilitation of 5 pump stations (Brattle Court, Reservoir Road, Hyde Park, Belmont,
12/17		and Spring Street) was substantially complete in June 2010.

## **CEB Impacts**

# S.708 Northern Extra High Service - New Pipelines

## **Project Purpose and Benefits**

☐ Contributes to improved public health
☐ Extends current asset life
☐ Improves system operability and reliability

To improve hydraulic service and reliability for major portions of the Northern Extra High System. Existing lines are undersized and frequently experience pressure problems. Improvements will include construction of two new pipe segments and rehabilitation of an existing mains.

## **Project History and Background**

Sections 34, 45 and 61 provide service to the Northern Extra High (NEH) communities of Waltham, Lexington, Bedford, Belmont, Winchester, and Arlington. The existing pipelines are not large enough to meet maximum day plus fire flow service goals. Construction of a new larger pipeline will improve reliability, pressure, and flows which will result in better fire protection and reduced pumping costs. Section 34, which is an undersized 1,532 linear feet 12-inch diameter cast iron main installed in 1911, may also be the source of water quality problems. The pipe is a key component of the NEH Service System and provides service between Brattle Court Pump Station and the community distribution systems. The remaining portion of Section 45 is a 16-inch diameter cast iron main 3,374 linear feet long that was installed in 1920. A portion of Section 45 was rehabilitated in an earlier phase of this project. The current phase includes rehabilitation of the remaining portion of the pipeline. Section 61 is a 24-inch diameter steel pipe installed in 1940.

## Scope

Sub-phase	Scope	Status
Design/CA/RI and construction – Sections 45, 63, and 83 (5242/6340)	Replacement of approximately 2,600 linear feet of Section 45 with 24-inch diameter pipe extending from the connection point at Meter 47 to Section 82 on Park Street at the Intersection of Paul Revere Road in Arlington; installation of about 2,100 linear feet of new 24-inch pipeline (Section 101), parallel to a portion of Section 83, starting from Meter 182 and proceeding to the intersection of Waltham Street (in Lexington and part of Waltham) and Concord Ave (in Lexington). Also, Rehabilitation of Section 63, consisting of about 3,400 linear feet of 20-inch pipeline connecting Section 63 to Meter 136.	Completed
Design and Construction Sections 34, 45, and 61 (7404/6522)	Replacement of 1,532 linear feet of 12-inch diameter cast-iron pipe (Section 34) with new 20-inch diameter pipe and rehabilitation of 3,374 linear feet of 16-inch diameter cast iron main (Section 45) and 4,771 lf of 24-inch diameter steel pipe (Section 61).	Future

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$10,721	\$3,632	\$7,089	\$53	\$53	\$3	\$398	\$6,638

Project		Status as % is approximation based on project budget and expenditures.
Status	33.9%	Construction of a portion of Section 45 was completed in September 2001. Design of
12/17		Sections 34, 45 and 61 scheduled to start in FY24.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$8,045	\$10,721	\$2,676	Dec-23	Jul-26	31 mos.	\$3,600	\$398	(\$3,202)

## **Explanation of Changes**

 Project cost, schedule, and spending changed due updated cost estimate for Sections 34, 45 & 61 Design Construction Administration/Resident Inspection and Construction as a result of increased scope of services to include Section 61.

## **CEB Impacts**

## S. 712 Cathodic Protection of Distribution Mains

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Extends current asset life
 ☑ Improves system operability and reliability

To evaluate the condition of existing cathodic protection systems and determine the feasibility of upgrading or installing cathodic protection systems to protect the system from corrosion.

#### **Project History and Background**

Within the MWRA water system there are approximately 300 miles of distribution pipe, 10 active pump stations, and 12 distribution storage facilities. A majority of the pipes are made of steel, cast iron and ductile iron and as a result are subject to corrosion due to the environmental conditions in which they reside. In order to maintain pipe integrity, cathodic protection is utilized within the system. Proper cathodic protection decreases the number of pipeline leaks and failures and ensures the integrity of the water distribution system is maintained.

Approximately 68 miles or 24% of MWRA's waterworks pipelines ranging from 24 inches to 60 inches in diameter are made of steel and are particularly subject to corrosion from acidic soils, fluctuating groundwater levels (especially where the groundwater is saline), and stray electrical currents. These steel pipelines are located in 26 of MWRA's 50 water communities.

Cathodic protection reduces deterioration of structural material, thereby increasing pipeline and storage tank life and deferring the need for replacement. Without proper cathodic protection, pipeline leaks and premature pipeline and storage tank failures increase, causing potentially costly property damage and possible loss of service to customers.

Some sections of MWRA's existing steel pipes were originally equipped with cathodic protection systems intended to reduce the effects of corrosion. Other steel pipelines had cathodic protection systems installed sometime after the original pipe installation. Other steel pipelines have been rehabilitated and still other sections of steel pipeline have never received cathodic protection.

Sub-phase	Scope	Status
Planning	Evaluation of the condition of the steel pipelines, identification of areas of rapid corrosion due to stray currents, and design and installation of corrosion test stations.	Completed
Cathodic Protection Testing and Evaluation Program (6438)	Test and evaluate 1,019 cathodic protection test stations and 16 rectifiers including: level of protection; functionality of insulation joints; perform repairs; and indentify, recommend and test replacement electrodes.	Completed
CA/RI for Cathodic Protection Shafts E & L (6439) and Construction (6440)	CA/RI and construction of Cathodic Protection Shafts E & L.	Future
Cathodic Protection (Western System) Design CA/RI and Construction (7609/7610)	Design CA/RI and Construction to replace the existing cathodic protection systems in order to maintain pipe and steel storage tanks integrity for the Western System.	Future

Sub-phase	Scope	Status
Cathodic Protection (Metro System) Design CA/RI and Construction (7611/7612)	Design CA/RI and Construction to replace the existing cathodic protection systems in order to maintain pipe and steel storage tanks integrity for the Metropolitan System.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$63,823	\$246	\$63,577	\$123	\$227	\$375	\$19,329	\$44,126

Project		Status as % is approximation based on project budget and expenditures. Project
Status	0.4%	Planning phase is complete. Cathodic Protection Testing and Evaluation Program was
12/17		completed in August 2017.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$1,704	\$63,823	\$62,119	Jan-20	Jun-26	77 mos.	\$1,345	\$19,329	\$17,984

## **Explanation of Changes**

Project cost, schedule and spending changed primarily due to new projects added for Cathodic Protection
West Design Construction Administration/Resident Inspection and Construction and Cathodic Protection
Metro System Design Construction Administration/Resident Inspection and Construction.

## **CEB Impacts**

# S. 713 Spot Pond Supply Mains - Rehabilitation

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To improve the condition, carrying capacity, and valve operability of the two long supply mains which extend north from Chestnut Hill to Spot Pond. These cast-iron mains, originally installed in 1899, deliver water to the Northern Low Service System. Improvements involve a combination of replacement, cleaning and lining, and valve replacement depending on specific site conditions and needs. Improving these supply lines will reduce the need to take water from the City Tunnel to augment the Low Service System and improve the quality of water delivered to eight user communities.

#### **Project History and Background**

The East and West Spot Pond Supply Mains (SPSMs) serve the Northern Low Service Area, including portions of Brighton, East Boston, Charlestown, Chelsea, Malden, Medford, Somerville, and Everett. The lines are also designed to fully supply Cambridge during drought or emergency. The mains have historically supplied Spot Pond and subsequently the James L. Gillis Pump Station (formerly the Spot Pond Pump Station). With the closure of Spot Pond as a water supply source and the construction of the Spot Pond Suction Main (Section 99) as the primary supply to the Gillis Pump Station, the Spot Pond Supply Mains serve as distribution mains to the eight communities and provide emergency backup supply to the Gillis Pump Station. In the event Section 99 is out of service, the station would take suction directly from these mains, rather than from Spot Pond. These mains interconnect with the new Spot Pond Covered Storage and pump station.

The East Spot Pond Supply Main consists of 61,000 linear feet of mostly 48-inch diameter pipe which passes through Brookline, Boston, Cambridge, Somerville, Medford, Malden, Melrose, and Stoneham. The West Spot Pond Supply Main consists of 53,000 linear feet of 48-inch and 60-inch diameter pipe that passes through Brookline, Boston, Cambridge, Somerville, Medford, and Stoneham. Portions of the SPSMs in Brookline, primarily on Beacon Street, were rehabilitated under the Boston Low Service Pipe and Valve Rehabilitation project.

The carrying capacities of the pipes had been significantly reduced as a result of the build-up of rust deposits (tubercules) and other matter along the pipe walls, which also contributed to water quality deterioration in the Low Service System. The ability of the mains to withstand service pressures was drastically reduced in some areas due to exterior corrosion of pipes. In addition, inoperable or poorly operating valves along the mains made isolation and re-routing of flow difficult to implement.

Section 67 is included in this project because it provides a connection between the East and the West SPSM from Section 11 at Porter Square in Cambridge to Section 4 at Union Square in Somerville. Section 67 consists of 6,900 linear feet of 48-inch diameter steel pipe constructed in 1949. Rehabilitation of this main was needed because of the age of the pipe and the critical role of the main in providing flow to the East and West mains during shut downs for maintenance and construction.

Internal lining of these mains to restore capacity and improve structural integrity, will ensure adequate peak and emergency flow to user communities, alleviate water quality deterioration, and provide emergency back-up capacity for the Northern High System and Northern Intermediate High via the Gillis Pump Station. MWRA's reconfiguration of the water distribution system provides for the Spot Pond Supply Mains to be fed from the City Tunnel Extension only during periods of peak demand, thus conserving tunnel supply for High Service use. Supply to the Low Service System will be provided by Weston Aqueduct Supply Mains 1 and 2, which are connected to the new Loring Road covered storage tanks in Weston that have been constructed as part of MWRA's MetroWest Water Supply Tunnel project. A portion of the supply is from WASM 4, which connects to the East and West Spot

Pond Supply Mains at Western Avenue and North Harvard Avenue and on Memorial Drive at Magazine Beach in Cambridge.

Completion of this project will improve pressures to the far reaches of the Northern High Service Area by reducing the demand burden on the City Tunnel Extension. The quality of water delivered to eight communities will improve as a result of the upgrade of 18 miles of deteriorated pipe.

Sub-phase	Scope	Status
Preliminary Design and Design/CA/RI (6223)	Preliminary design, design, construction administration, and resident inspection of the rehabilitation or replacement of Sections 3, 4, 5, 6, 7, 9, 10, 11, 12, 67, and portions of Sections 2, 16W, and 57.	Completed
North (Medford/ Melrose) Construction- CP1 (6317)	Cleaning and lining of 20,300 feet of 48-inch and 60-inch pipe in Medford, Malden, Melrose, and Stoneham (Sections 7 and 12). Replacement of valves and reconfiguration of blow-off valves to eliminate cross-connections with storm drains or sewers. Elimination of connection with Spot Pond (considered a cross connection with a non-potable water source), and configuration to allow emergency reconnection if needed.	Completed
Middle (Medford/ Somerville) Construction – CP2 (6381)	Cleaning and lining of 24,100 feet of the East Spot Pond Main (48-inch pipe) in Somerville and Malden (Sections 4, 5, 6, and 7) including reinforcement at rail and MBTA crossings; cleaning and lining of 14,000 feet of the West Spot Pond Main (48-inch pipe) in Medford and Somerville; and some steel pipe replacement on the Mystic Valley Parkway (800 feet, 60-inch, Section 16W), and Middlesex Fells Parkway (700 feet, 48-inch, Section 5 on land). Cleaning and lining on Somerville Avenue (Section 67, 6,500 feet of 48-inch steel). Replacement of valves throughout the pipelines, including in Medford Square at the interconnections of Sections 12, 16W, and 57.	Completed
South (Cambridge/ Boston) CA/RI Construction – CP3 (6382)	Cleaning and lining of 11,700 linear feet of the East Spot Pond Main in Charles River Crossing and Cambridge (48-inch, Sections 3 and 4) including valve replacement, and cleaning and lining of 16,800 linear feet of the West Spot Pond Main in Harvard St., Franklin St., No. Harvard Avenue, and Massachusetts Avenue (48-inch, Sections 9 and 11, Brighton and Cambridge).	Completed
Early Valve Replacement Contract (6475)	Installation of nine main line valves and associated blow-off valves, as well as permanent by-pass piping to meters and air valves. Also includes removal of pipe at three locations for materials strength testing.	Completed
Walnut Street Bridge Truss Design and Construction (6697/7483)	Section 4 Bridge Truss at Walnut Street spans New Hampshire-Maine Railroad Line is in need of repair, painting and possible replacement.	Future
Early Valve Equipment Purchase (6483)	Purchase Order for 12 valves that were installed from 1998-2001 as a precursor to the cleaning and lining contracts.	Completed
Section 4 Webster Ave Bridge Pipe Rehabilitation Design and Construction (7334/7335)	Section 4 is a 48-inch diameter cast iron main crossing the Webster Ave Bridge in Somerville that needed to be rehabilitated and was currently out of service due to pipe deflection and leakage. This project returned an isolated pipeline to service to provide redundancy.	Completed

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## **Explanation of Changes**

• Project cost changed due to inflation adjustments and schedule changed due to project priorities.

## **CEB Impacts**

# S. 719 Chestnut Hill Connecting Mains

#### **Project Purpose and Benefits**

☐ Contributes to improved public health
☐ Extends current asset life
☐ Improves system operability and reliability

To simplify the complex arrangement of old pipes near the former Chestnut Hill pump stations for safety and operability. Also, create a connection between Shaft 7 of the City Tunnel and the Southern Distribution surface mains to provide redundancy along the Dorchester Tunnel. MWRA is restructuring the piping arrangement through a combination of constructing new pipelines, rehabilitating older pipelines, sliplining, abandoning aqueducts, replacing pressure regulating valves, replacing the emergency pumps at Chestnut Hill, and abandoning pipes and valves which are no longer needed for service.

#### **Project History and Background**

The City Tunnel divides into two branches at Chestnut Hill: the City Tunnel Extension going north to supply the Northern High, Northern Intermediate High and Northern Extra High Systems, and the Dorchester Tunnel, which goes south to supply the Southern High and Southern Extra High Systems. There are two shafts in the Chestnut Hill area: Shaft 7 on the City Tunnel, located immediately west of the Chestnut Hill Reservoir, and Shaft 7B on the Dorchester Tunnel, located immediately east of the reservoir. At each of these shafts two newer pipes extend to connect to the older pipelines of the Boston Low, Northern Low and Southern High Systems.

Previously, the Southern High System could only be supplied from Shaft 7B. If the Dorchester Tunnel were to be out of service, it would be necessary to activate the Sudbury Reservoir System, transport water from there via the Sudbury Aqueduct (currently on standby) to the Chestnut Hill Reservoir (currently on standby) and utilize the emergency pump station at Chestnut Hill to pump water from the reservoir to the Southern High System. This water would not be of acceptable quality and its use would require a boil order. A new potable water connection has been constructed from the low service pipes to the new emergency pump station.

The older pipes in the area were originally designed to be supplied from the Cochituate and Sudbury Aqueducts, the Chestnut Hill Reservoir, or the Chestnut Hill High Service and Low Service pump stations. None of these facilities are presently in normal use, and a new underground pump station has replaced the Chestnut Hill pump stations. The pipe network is not only old and inordinately complex, but it is not designed to take water from the two tunnel shafts that are the present sources of potable supply. Portions of this pipe network have been rehabilitated and integrated into the present operation of the system. Considerable lengths of pipe with minimal or stagnant flow, which are a source of discolored water, have been abandoned. Some new pipe was added to better connect the two tunnel shafts with the surface pipe network. The interconnections between the potable water system and standby facilities, which are considered non-potable, have been rebuilt to eliminate the possibility of cross-connections during normal operation.

The High and Low Service pump station buildings at Chestnut Hill housed facilities which served four functions: emergency pumping, surge relief for the Boston Low System, level control for the Chestnut Hill Reservoir, and remote hydraulic operation of large valves on and near the site of the High Service pump station. Construction of a new underground pump station provides more reliable emergency pumping capacity and has enabled MWRA to abandon the pump station buildings and return them to the Commonwealth. Surge relief was provided in a new Shaft 7B pressure reduction chamber that also interconnects restructured piping. Gate House No. 2 has also been refurbished to provide supply to the new pump station. New valves have been constructed to replace the old hydraulic valves.

## Scope

Sub-phase	Scope	Status
Design/CA/RI and Construction – Pump Station Potable Connection (6141/6651)	Construction of potable suction and discharge piping to the emergency pump station, restructuring piping to permit surplusing of Chestnut Hill pump station site, elimination of potential cross connections with non-potable suction and discharge lines, reconstruction of the Shaft 7B PRV Station, upgrade of the Shaft 9A PRV station, rehabilitation of valves at Waban Hill Reservoir, and abandonment of the Ward Street Pumping Station and associated piping. Construction to provide potable low service suction to the new pump station and to restructure piping to permit surplusing of the historic pumping stations site. Completion of upgrades of facilities that also may be used during the Walnut Hill Water Treatment Plant startup at Shaft 7B, Shaft 9, and Ward Street.	Completed
Preliminary Engineering (6301)	Provide preliminary design services for the rehabilitation and upgrade of facilities so that MWRA is able to operate the water system during normal conditions and specific emergency scenarios.	Completed
Design/CA/RI and Construction – Emergency Pump Relocation (6503/6501)	Relocation of the emergency pumping function and other minor facilities from the existing High and Low Service pump station buildings to a new 90-mgd underground pump station constructed adjacent to the Low Service building. The relocation enables MWRA to surplus these historic buildings. The new pump station has the capacity to pump 90-mgd from the Sudbury Aqueduct/Chestnut Hill Reservoir to the Southern High Distribution System.	Completed
Boston Paving (6558)	Payment(s) to the City of Boston for paving work provided.	Completed
BECo Emergency Pump Connection (6623)	Payment to Boston Edison Company for installation of electrical service to meet special requirements.	Completed
Chestnut Hill Final Connections Design ESDC/REI and Construction (6995/6982)	Chapter 30 and Chapter 149 final pipe connections.	Future
Equipment Pre- Purchase (6814)	Valve pre-purchase to support potable connection construction so that the Chestnut Hill Pump Station site could be returned to the Commonwealth of Massachusetts as surplus property.	Completed
Demolition of Garages (6820)	Demolition of garages prior to transfer of property to the Commonwealth, at request of state Department of Capital Asset Management.	Completed
Chestnut Hill Gatehouse No. 1 Repairs (7382)	This project will provide structural stability of sub-structure of gatehouse which involves flowable fill and structural support walls.	Active

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$33,401	\$17,487	\$15,914	\$782	\$782	\$0	\$0	\$15,126

Project		Status as % is approximation based on project budget and expenditures. Chestnut
Status	52.4%	Hill Gatehouse Repairs commenced in November 2017.
12/17		

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$33,094	\$33,401	\$307	Dec-22	Dec-27	60 mos.	\$14,602	\$0	(\$14,602)

## **Explanation of Changes**

- Project increased due inflation adjustments for Chestnut Hill Final Connections work. This was partially offset by actual award being less than budgeted for the Chestnut Hill Gatehouse #1 Repairs.
- Schedule shifted due to project priorities.

## **CEB Impacts**

# S. 721 Southern Spine Distribution Mains

## **Project Purpose and Benefits**

☑ Contributes to improved public health
 ☑ Extends current asset life
 ☑ Improves system operability and reliability

To increase carrying capacity and improve valve operability along the large surface mains that run parallel to the Dorchester Tunnel and provide service to the Southern High and Southern Extra High systems. These mains have serious hydraulic deficiencies and many inoperable valves. Hydraulic performance improvements are needed to provide redundancy for the Dorchester Tunnel. Work will include rehabilitation of more than 12 miles of large diameter pipeline.

#### **Project History and Background**

The Southern Spine Distribution Mains comprise the surface piping which parallels the Dorchester Tunnel. The mains begin in the vicinity of Shaft 7B in Brookline and end at the Blue Hills Reservoir in Quincy. The mains serve the Southern High and Southern Extra High System communities of Boston, Brookline, Milton, Quincy, Norwood, Canton, Stoughton and Dedham-Westwood.

Because of the poor conditions of the valves, MWRA operations staff must frequently close several valves in order to shut down a line. This practice often results in closing more of the system than is otherwise necessary. Several of these pipelines are currently functioning at approximately 50% of their original carrying capacity due to the build-up of rust deposits and other matter along the pipeline walls. In their present condition, these mains could not provide adequate service to users if the Dorchester Tunnel was taken off-line.

Construction of the first two contracts for Section 22 South was completed by June 2005. The contracts for Section 107 Phase 1 and Phase 2 were completed in January 2009 and January 2012, respectively.

Sub-phase	Scope	Status		
Sections 21,43, 22 Design/CA/RI	24 + 40 in shall share the miner and in shall share of 47,000 lines of 5 - 4 of 20			
Section 22 South Construction	Rehabilitation of approximately 10,000 linear feet of 48-inch diameter Section 22 South, and installation of 1,700 linear feet of new pipe.	Completed		
Adams Street Bridge	Relocation of a pipeline made necessary by the reconstruction of this bridge by the MBTA.	Completed		
Southern High Ext Study (6602)	Study to determine the feasibility of expanding water services to additional communities in the Southern High Service Area. Cost of the study and public participation was fully funded by the Commonwealth of Massachusetts. Completed in May-1999.	Completed		
Section 22 North Facility Plan/EIR (7155)	Facility Plan/EIR for Section 22 North.	Future

		January 2012, respectively.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY18 FY19 Chge.		FY18 FY19 Chge.		FY18	FY19	Chge.	
\$76,281	\$77,576	\$1,295	May-27	May-27	None	\$4,342	\$2,212	(\$2,130)

## **Explanation of Changes**

- Project cost increased due to inflation adjustments for Section 22 North and Sections 20 & 58.
- Spending changed due to updated schedule for Section 22 North Construction.

## **CEB Impacts**

# S. 722 Northern Intermediate High (NIH) Redundancy and Storage

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

## Master Plan Project **2008** Priority Rating 1 (see Appendix 3)

The Northern Intermediate High System lacks both pipeline redundancy and sufficient storage. The intent of this project is to identify and take measures that reduce both the risk and impacts of a pipeline failure within the Northern Intermediate High System.

#### **Project History and Background**

This system serves Reading, Stoneham, Wakefield, Wilmington, Winchester, and Woburn with an average daily demand of 9.9 million gallons. The population served is approximately 150,000. The current six million gallon capacity of MWRA's Bear Hill Tank in Stoneham is both insufficient to meet MWRA's goal of one day of storage for the service area and is not advantageously placed within the NIH system.

Section 89 is a three mile, four foot diameter Prestressed Concrete Cylinder Pipe (PCCP) transmission main with no redundancy other than the low capacity, century old Section 29 that parallels its route for a short distance. The 10,500 foot length of Section 89 northwest of Spot Pond is constructed of Class IV wire which is of significant concern given experience with catastrophic failures elsewhere in the country. Section 29 was originally constructed in 1901 and measures 6,300 feet in length and 24 inches in diameter. Because of its age and the fact that it is unlined cast-iron pipe, tuberculation has reduced the pipeline carrying capacity to approximately 45% of the original design capacity (C-value: 58). In the event of a shut down in Section 89, Section 29 may not be able to meet the minimum hydraulic needs of the area and additional chlorination to maintain water quality may be required.

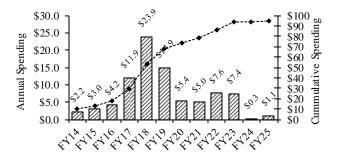

Scope	Status
Developed a concept level plan to evaluate options to reduce the risk and the impacts of potential failures in Sections 29 and 89. Measures evaluated included valve improvements, improved community interconnections, pipeline redundancy, targeted emergency response plans, additional storage and other improvements that can be implemented within the NIH system. Concept planning work included environmental review of the recommended plan and specification and purchase of the Mobile Pump Unit.	Completed
This phase includes the design and construction of short-term measures identified in the conceptual plan including Gillis PS Improvements and the Reading/Stoneham Interconnection.	Completed
	risk and the impacts of potential failures in Sections 29 and 89. ## NIH Redundancy & Covered Storage

#### Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$113,121	\$118,003	\$4,882	Jan-28	Jan-28	None	\$42,516	\$40,365	(\$2,151)

## **Explanation of Changes**

- Project cost increased primarily due to inflation adjustments for NIH Storage contracts, updated cost
  estimates for Section 89 Replacement Design/Construction Administration and a separate contract added for
  Resident Engineering/Resident Inspection Services, additional change orders for Sections 89/29 Phases 1B and
  C, partially offset by Section 89/29 Redundancy Construction Phase 2 being awarded less than budget.
- Project spending changed primarily due to Section 89/29 Redundancy Construction Phase 2 being awarded less than budget, updated cash flow for Section 89/29 Redundancy Phase 1C and Section 89/29 Redundancy Design, partially offset by a separate contract added for Section 89 Replacement Resident Engineering/Resident Inspection Services and updated cost estimate for Section 89 Replacement Design/Construction Administration Resident Engineering/Resident Inspection Services.

## **CEB Impacts**

## S. 723 Northern Low Service Rehabilitation - Section 8

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To improve the condition and reliability of unlined cast-iron pipes serving a portion of the Northern Low System. These pipelines, have reduced carrying capacity because of rust build-up, and have experienced leaks at above average rates. Improvements will consist of a combination of replacement, cleaning, lining, and valve repairs. Rehabilitation of Sections 37 and 46 will improve the service to East Boston and will allow the shutdown of Section 8. The construction of Section 97A provides needed redundancy to East Boston via the Northern High System.

## **Project History and Background**

Section 8 was installed between 1897 and 1915 and serves Malden, Everett, Chelsea, and East Boston. Section 8 is currently functioning at approximately 45% of its original capacity (C-value: 60) due to the build-up of rust deposits and other matter along the interior pipe wall. Excavations for the installation of new valves along portions of Section 8 have indicated severe external corrosion on the pipe wall, which could affect the structural stability of the pipeline.

Before rehabilitating Section 8, the distribution system supplying East Boston must be strengthened. Sections 37 and 46, located in Chelsea, are 36-inch diameter cast iron pipes. These two pipe sections connect between Section 57, portions of which were previously rehabilitated, and the two Chelsea River crossings to East Boston at Sections 8 and 38. It is anticipated that Sections 37 & 46 will need cleaning and cement mortar lining. Section 97A, a new 16-inch diameter pipe provides redundancy to East Boston via Northern High System. The pipeline connects to existing Meter 99 in East Boston and to the Boston low-pressure system through a new pressure-reducing valve.

Sub-phase	Scope	Status
Design CA/RI and Construction – Section 8 and 57 (7092/6322)	Cleaning and cement mortar lining of the pipeline interior, replacement of all defective and inoperable valves, and the addition of new valves for 7,500 linear feet of 48-inch pipe on Section 8 in Malden and Everett. Replacement work consists of replacing 9,722 feet of 42-inch pipeline with new 36-inch ductile iron main and replacement of blow-off connections from Second Street in Everett to the Mystic River Bridge in Chelsea.	Future
Rehab Sections 37 and 46 Chelsea, East Boston Design, CA/RI and Construction (7405/6962)	Rehabilitation of approximately 3,550 linear feet of 36-inch cast iron main (Section 37) and approximately 2,500 linear feet of 36-inch cast iron main (Section 46). Both sections are located in Chelsea and are critical to the supply of water to East Boston. Section 38, the 36-inch ductile iron pipeline under the Chelsea River, is assumed to not need rehabilitation.	Future
Section 97A Construction (7021)	Installation of approximately 3,000 linear feet of 20-inch, 16-inch and 12-inch water main and a new pressure-reducing valve. This completed work is part of the Northern High System and adds redundancy to East Boston, including Logan Airport.	Completed

Sub-phase	Scope	Status
Sections 50/57 Water and	Design, CA/RI and construction of rehabilitation of: 12,000 feet of	Active/Future
19/20/21 Sewer	20-inch cast iron Northern High System water pipe; 8,000 feet of	
Rehabilitation Design	48-inch steel Northern Low System water pipe and 11,000 feet of

Project		Status as % is approximation based on project budget and expenditures. Section 97A
Status	3.8%	Construction contract was substantially complete in October 2009. Contract 7540 was
12/17		awarded in June 2017.

## Changes to Project Scope, Budget, and Schedule

	Project Cost	roject Cost Scheduled Completion Date			FY19-23 Spending			
FY18	FY19	Chge.	FY187	FY18	Chge.	FY18	FY19	Chge.
\$56,889	\$67,466	\$10,577	Jul-28	Jul-28	None	\$31,827	\$30,465	(\$1,362)

## **Explanation of Changes**

- Project cost increased primarily due to updated cost estimates for Sections 8 and 57 Design Construction Administration/Resident Inspection and Construction. Also, actual award was greater than budget for Section 50 & 57 Water & 21/20/19 Sewer Design Construction Administration/Resident Engineering Inspection.
- Spending changed due to Section 50 Pipe Rehabilitation scope included in Section 57 contract.

## **CEB Impacts**

None identified at this time.

# S. 727 Southern Extra High Redundancy & Storage

## **Project Purpose and Benefits**

✓ Contributes to improved public health
✓ Provides environmental benefits
✓ Extends current asset life
✓ Improves system operability and reliability

## Master Plan Project **2008** Priority Rating 2 (see Appendix 3)

To provide redundancy to the southern extra high mains Section 77 and 88 serving Boston, Canton, Norwood, Stoughton and Dedham-Westwood by construction a redundant pipeline. Also, to increase distribution storage within the service area to improve system operation and reliability.

## **Project History and Background**

This project will provide redundancy to Sections 77 and 88 serving Boston, Canton, Norwood, Stoughton, and Dedham-Westwood, through construction of a redundant pipeline. The project will also increase distribution storage within the service area to improve system operation and reliability.

MWRA's Southern Extra High pressure zone serves Canton, Dedham, Norwood, Stoughton, Westwood, portions of Brookline, Milton, Newton, and the Roslindale and West Roxbury sections of Boston. Water is pumped to this pressure zone from the Dorchester tunnel through two pump stations.

The Southern Extra High pressure zone is currently deficient in distribution storage and lacking in redundant distribution pipelines. MWRA maintains two distribution storage tanks (Bellevue Tank 1 and Bellevue Tank 2) totaling 6.2 million gallons of storage for the entire Southern Extra High service area, which is significantly below the goal of one day of storage. Further highlighting the deficiency is the fact that the overflow elevation for the 2.5-million-gallon Bellevue Tank 1 is 25 feet lower than the overflow elevation for the newer 3.7-million-gallon Bellevue Tank 2, limiting its useful capacity.

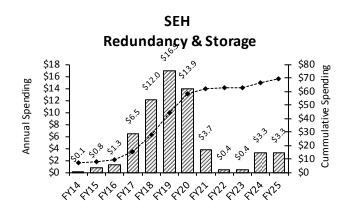

The five communities in the southern portion of the service area (Canton, Norwood, Dedham, Westwood, and Stoughton) are served by a single MWRA 36-inch diameter transmission main (Section 77), which is five miles long. Canton and Stoughton are served by a branch (Section 88) off of Section 77. Although several of these communities are partially supplied by MWRA, the loss of this single transmission main would result in a rapid loss of service in Norwood and Canton, and water restrictions for Stoughton and Dedham/Westwood.

In addition, the Southern Extra High service area has expanded during the past several years with the addition of the partially-supplied Town of Stoughton and the Dedham-Westwood Water District. This growth has been concentrated to the south while the Bellevue tanks are located at the northern end of the service area. Although several of these communities are partially supplied by MWRA, the Town of Norwood is fully supplied by this line and has no back-up source of supply. There have been several instances when the water supply to Norwood has been interrupted due to valve and/or pipe failures.

Sub-phase	Scope	Status
Concept Plan (6452)	A study to assess storage, capacity and condition of existing distribution pipes, new pipeline routing options and tank sites were identified.	Completed

Sub-phase	Scope	Status
University Ave Water Main Section 108 (6445)	Initial phase to provide redundant pipeline on University Avenue in Norwood. Project broken out from the larger SEH redundancy and storage projects. This work has been completed.	Completed
Redundancy Pipeline Section 111 Design (6453) & Construction Ph 1 Contracts 1, 2, and 3 (6454, 7504, 7505)	The first phase funds the design and construction of a pipeline from the Bellevue storage tank to East Street in Westwood, which will provide redundancy to Sections 77 & 88.	Active/Future
Storage Design & Construction Phase 2 (6444/7245)	The second phase will provide redundancy to Sections 77 & 88 through design and construction of one (1) 2.5 million gallon distribution storage tank. This tank is needed to provide adequate one day storage to the service area.	Future
Storage Design & Construction Phase 3 Second Tank (7263/7262)	The third phase will provide additional redundancy to Sections 77 & 88 through design and construction of an additional one (1) 2.5 million gallon distribution storage tank. This tank is needed to provide additional one day storage to the service area.	Future
Section 77/88 Design/Constr. (7112/7113)	Rehab of Sections 77 & 88 after redundant pipeline is in place.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$127,694	\$15,416	\$112,278	\$12,024	\$20,684	\$16,873	\$35,366	\$64,887

## **Explanation of Changes**

- Project cost Increased due to updated cost estimate for Redundancy Pipeline Section 111 Construction 3, actual award for Redundancy Pipeline Section 111 Construction 2 was greater than budgeted, and inflation adjustments on unawarded contracts.
- Project spending changed due to primarily due to updated cost estimate for Redundancy Pipeline Section 111
   Construction 3 and actual award for Redundancy Pipeline Section 111 Construction 2, partially offset by updated cash flow for Redundancy Pipeline Section 111 Construction Phase 1.

## **CEB Impacts**

None identified at this time

# S. 730 Weston Aqueduct Supply Mains (WASMs)

#### **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Extends current asset life
☑ Improves system operability and reliability

To improve the condition and carrying capacity of these major supply lines and the quality of the water supplied to the communities in the Low, High, Intermediate, and Northern Extra High pressure zones. Increasing the capacity of the WASM 3 Supply Main is a key component of the Long term Redundancy Plan for the metropolitan tunnel system. Timely rehabilitation will reduce the costs of replacing corroded pipes, reduce red water and chlorine tastes, and improve water pressure.

## **Project History and Background**

MWRA's tunnels and aqueducts bring water to the metropolitan area from the supply reservoirs in central Massachusetts. In Weston, where the Hultman Aqueduct and the MetroWest Tunnel end, the water is still miles away from most customers. Together, the City Tunnel and the four Weston Aqueduct Supply Mains (WASMs) carry the water this final distance. When rehabilitation of the WASMs is complete, they will transmit about one-third of the water to MWRA's service areas, and the City Tunnel will carry the remaining two-thirds. The WASMs are now the only means of conveying water to the city in the event of a problem with the City Tunnel. The Sudbury Aqueduct can deliver non-potable water during an extreme emergency.

WASM 1 is a 48-inch diameter cast iron pipeline about 38,700 feet long that was constructed in 1904. WASM 2, built in 1916, is a 60-inch diameter cement-lined cast iron pipeline about 34,800 feet long. WASMs 1 and 2 begin in Weston at the Weston Aqueduct Terminal Chamber (WATC) and run parallel through Newton, mostly along Commonwealth Avenue, ending in Boston near Chestnut Hill Reservoir. These pipelines supply water to the Boston Low pressure zone.

WASM 3 is an 11-mile steel pipeline that was installed between 1926 and 1933. This major supply line carries high service water from the 7-ft diameter branch of the Hultman Aqueduct to community connections and MWRA pumping stations serving the Northern High, Intermediate High, and Northern Extra High service systems. It extends from the Hultman Aqueduct branch in Weston northeast to the Shaft 9 line in Medford and supplies more than 250,000 customers. WASM 4 was constructed in 1932 and is predominantly a 60-inch diameter pipeline consisting primarily of unlined steel with some pre-stressed concrete cylinder and cast iron sections. It extends 47,000 linear feet from Weston through Newton, Watertown, and Boston, and into Cambridge.

WASM 3 and WASM 4 were originally part of the Low Service System and conveyed water from the Weston Aqueduct to the Spot Pond Supply Mains. Upon completion of the Hultman Aqueduct, and its interconnection to the Weston Aqueduct Terminal Chamber in 1941, WASM 3 became part of the High Service System. With the addition of Newton to the metropolitan service area in the early 1950s, the western portion of WASM 4 was transferred to the High Service System as a temporary means of conveying water from the Hultman to portions of Newton and Watertown. Supply to the Spot Pond Supply Mains from WASMs 3 and 4 was maintained at their east ends through pressure reducing valves.

WASMs 1, 2, and 4 were previously functioning below full capacity because of the buildup of rust deposits and other matter along the pipeline walls, and undersized main line valves. Rehabilitation of these pipelines was necessary to restore their original carrying capacity and included replacement of valves to provide more efficient operations and emergency response, elimination of tuberculation on the interior walls, and application of cement mortar lining to the interior pipe walls to prevent further internal corrosion and improve water quality.

The joints on WASM 1 and WASM 2 are constructed of bells and spigots filled with lead packing. The bell and spigot construction gives the joints some flexibility, but lead packed joints are more prone to failure compared to push-on or mechanical joints with modern synthetic gasket material. The existing joints are subject to potential failure because of deterioration, pipe movement due to frost, settlement, or adjacent construction. Water leaking from a failing joint can undermine the pipe, causing catastrophic failure. These failures can cause severe damage and disruption. WASM 2 also had insulating joints consisting of cast-iron pipes with wood fillers. These joints were intended to prevent electrical current from flowing along the pipeline but, in general, have been prone to failure and leakage.

The rehabilitation of WASMs 1 and 2 is now complete. WASM 1 and WASM 2 now connect to the new Loring Road tanks in Weston and supply the Boston Low mains in Clinton Road, Beacon Street, and Boylston Street, which were rehabilitated as part of the Boston Low Service Rehabilitation project. With the completion of these projects the entire Boston Low Service System, which accounts for 15% of overall MWRA water demand, is now rehabilitated from Weston to Boston.

There is no back up for WASM 3, which is the sole source of supply for the higher elevation portions of Waltham, Belmont, Arlington, Lexington, Bedford, and Winchester. The southern portion of this pipeline cannot be shut down for maintenance or rehabilitation until a new Waltham Connection to the Northern Extra High system is complete. Next to a failure of the Hultman Aqueduct or the Metropolitan Tunnel System, analysis has shown that a failure of WASM 3 is one of the highest risks in the MWRA distribution system. Improvements to WASM 3 are included in Project 628 Metropolitan Redundancy Interim Improvements. Replacement of Section 36 improves redundancy in the Northern Extra High pressure zone between Spring Street pump station and Brattle Court pump station, and installation of a redundant line from WASM 3 to Spring Street pump station provides flexibility to maintain flow to the Spring Street pump station during the rehabilitation of WASM 3.

Nonantum Road construction (rehabilitation by sliplining and cleaning and lining) was completed in March 1997 and the rehabilitation of the western portion of WASM 4 was completed in March 2001, including meter upgrades. In order to remove the western portion of WASM 4 from service to allow it to be rehabilitated, MWRA provided alternative supplies for Watertown Meter 103 and Newton Meters 104 and 105. Meter 103 was upgraded and local water main improvements were built along Galen Street in Watertown. These efforts allow the other Watertown meters to temporarily supply the area normally served by Meter 103. These improvements were constructed as non-participating bid items (i.e., funded by MWRA) under a contract administered by the Massachusetts Highway Department. Alternative sources for the Newton northern pressure district, normally supplied by Meters 104 and 105, have been constructed. Two pressure reducing valves, one at Chestnut Street and one at Walnut Street, were installed to allow the southern pressure district that is supplied by the Commonwealth Avenue Pumping Station to temporarily serve the northern pressure district. The rehabilitation of the eastern portion of WASM 4 included fixing a portion of the South Charles River Valley Sewer Sections 163 (D) and 164 (E), a 100+ year old brick sewer that is located directly below the water main. The rehabilitation of WASM 4 is complete.

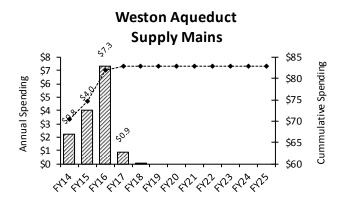

WASM 4, since rehabilitated will continue to operate as a high service main from the Hultman Aqueduct Branch connection to Shaft W of the MetroWest Tunnel up to the pressure reducing valve facility at Nonantum Road. It will then continue as a low service main to its connection with the East and West Spot Pond Supply Mains. WASM 4 also has the capability to operate completely as a low service main. This flexibility in operating conditions allows WASM 4 to best support the system.

Sub-phase	Scope	Status
Design/CA/RI – WASMs 1 & 2 (6142)	Design, construction administration, and resident inspection for the rehabilitation of WASM 1 and WASM 2 (construction contracts 6280 and 6281).	Completed

Sub-phase	Scope	Status
Design/CA/RI - WASM 4 (5147)	Design, construction administration, and resident inspection for the rehabilitation of WASM 4 (construction contracts 6203, 6175, 6312, 6176, and 6313).	Completed
Construction - Newton WASMs 1 & 2 (6280)	Construction work on WASM 1 and WASM 2 along Commonwealth Avenue and WASM 1 through Centre Street to the Newton Commonwealth Golf Course.	Completed
Construction - Boston WASMs 1 & 2 (6281)	Construction on the remaining lengths of WASMs 1 and 2 consists of rehabilitation of 8,640 linear feet of Section 4 of WASM 1 through the Newton Commonwealth Golf Course to Gatehouse #1, rehabilitation of 11,450 linear feet of Sections 7 and 8 of WASM 2 between Grant Avenue and Cleveland Circle, and installation of 650 linear feet of 36-inch pipe from Shaft 7 to Section 47.	Completed
Construction - Arlington Section 28 CP1 (6546)	Rehabilitation of Section 28, the suction main to the Brattle Court Pumping Station, from the WASM 3 connection to the pumping station.	Completed
Construction - Auburndale WASMs 1, 2 & 4 (6175)	Cleaning and lining of 5,300 linear feet of 48-inch and 12,300 linear feet of 60-inch diameter mains of WASMs 1, 2 and 4 (Sections 2, 5, 13 and portions of 1) from Weston across the Charles River along Commonwealth Avenue to the Mass Pike in Newton, as well as replacement of existing line valves, air/vacuum valves and blow-off valves.	Completed
Construction - Newton WASMs 2 & 4 (6312)	Cleaning and cement lining of 21,200 linear feet of 60-inch pipe on WASM 4 (Sections 13 & 14) along Rowe, Webster, Elm and Washington Streets in Newton, and 5,800 linear feet of 60-inch pipe on WASM 2 (Section 2) along Commonwealth Avenue from Bullough Parkway to Grant Avenue as well as rehabilitation of Meters 104 and 105.	Completed
Construction - Allston WASM 4 & W. Ave Sewer (6313)	Replacement of the Nonantum Road PRV and sliplining of 1,600 linear feet of pipe from Brooks Street to North Beacon Street, sliplining with some limited pipe replacement and cement lining of 10,538 linear feet of 60-inch pipe mostly along Western Avenue, 1,008 linear feet of 42-inch pipe mostly along Memorial Drive, 808 linear feet of twin parallel 30-inch pipes within the Western Avenue Bridge, replacement of Master Meter 100 and rehabilitation of the South Charles River Valley Sewer to include installation of a cured-in-place liner in approximately 5,150 feet of sewer, as well as removal and disposal of sediment in the existing brick sewer, power washing, and rehabilitation of existing manholes and installation of new manholes.	Completed
Construction – WASM 3 PCCP SPL12 (7000)	Replacement of approximately 2,100 linear feet of 60-inch Prestressed Concrete Cylinder Pipe (PCCP) on WASM 3 (Section 12) in Arlington. Includes replacement of air release manhole, replacement of two blow-offs and addition of a mainline butterfly valve with chamber and separate air release manhole.	Completed
Design CA/RI WASM 3 PCCP SPL12 (7001)	Design, construction administration and resident inspection services for the replacement of the PCCP pipe portion of WASM 3 (construction contract 7000).	Completed

Sub-phase	Scope	Status
Design CA/RI Section 36/ WS/Waltham Connection (6540)	Design, construction administration and resident inspection services for the replacement of Section 36, rehabilitation of the Watertown Section, a new 11B interconnection to WASM 3, replacement of meter 86 in Arlington, and replacement of butterfly valve S9-A in Medford. (construction contracts 7222, 7448).	Active
Construction Watertown Section (7222)	Rehabilitation of approximately 5,795 linear feet of the Watertown Section.	Completed
Construction Section 36/W11/S9- A11 Valve (7448)	Replacement of approximately 5,200 linear feet of 1911 vintage 16-inch diameter cast-iron pipe from the Brattle Court pumping station to the Arlington Heights Standpipe, construction of a new 11B interconnection to WASM 3, replacement of meter 86 in Arlington, and replacement of 48 inch mainline butterfly S9-A11-A in Medford.	Complete
Design CA/RI Section 28 (7083)	Design, construction administration, and resident inspection services for the rehabilitation of Section 28, suction main to the Brattle Court Pumping Station, from the WASM 3 connection to the pumping station (construction phase CP1, contract 6546).	Completed

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$80,559	\$80,488	\$71	\$71	\$14,516	\$0	\$0	\$0

Project		Status as % is approximation based on project budget and expenditures.
Status	99.9%	Rehabilitation of WASMs 1, 2 & 4 are complete. Section 28 Arlington CP-1 was
12/17		substantially complete in April 2011. Design CA/RI Section 36/Watertown
		Section/Waltham Connection commenced in January 2011. Watertown Section
		Rehabilitation was substantially complete in December 2013. Section 36/W11/S- 9-
		A11-A Valve was substantially completed in December 2016.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Schedu	led Comple	etion Date	n Date FY19-23 Spending		
FY187	FY19	Chge.	FY18	FY19	Chge.	FY18	FY18	Chge.
\$80,696	\$80,559	(\$137)	Dec-16	Dec-16	None	\$80	\$0	(80)

## **Explanation of Changes**

- Project cost and schedule changed primarily due to updated Survey cost and updated change order amount for Section 36/W11/S 9-A11 Valve Construction.
- Project spending changed due to updated Survey cost.

## **CEB Impacts**

None identified at this time.

## S. 735 Section 80 Rehabilitation

## **Project Purpose and Benefits**

✓ Contributes to improved public health
 ✓ Extends current asset life
 ✓ Improves system operability and reliability

#### Master Plan Project 2009 Priority Rating 3 (see Appendix 3)

Rehabilitation of approximately 16,197 feet of pipe along Route128/95. Section 80 supplies water to Wellesley and Needham. Rehabilitation will improve water quality to these two MWRA communities.

#### **Project History and Background**

Section 80 is a steel main that runs from Shaft 5 of the City Tunnel in Weston extending through Newton to supply Wellesley and Needham. The main runs along portions of 128/95 and has been exposed to highly corrosive conditions and the cathodic protection system has not been maintained. Complaints from residents in Needham and Wellesley of a tar-like smell in the water indicate deterioration of the pipe liner. Testing indicated phenols levels 10 times above allowable limits. Failure of Section 80 would create huge traffic challenges on this major metro-Boston highway.

## Scope

Sub-phase	Scope	Status
Section 80 Rehabilitation Design, CA/RI and Construction (6892/6891)	Design and rehabilitation of approximately 16,197 feet of Section 80 along route 128/95.	Future
Section 80 Replacement Construction (7532)	Replacement of 200 linear feet of Section 80 that is leaking.	Active

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY14-18	FY18	FY19	FY19-23	Beyond FY23
\$12,570	\$233	\$12,337	\$1,694	\$1,927	\$2	\$739	\$9,904

Project		Status as % is approximation based on project budget and expenditures. Section 80
Status	11.1%	Replacement construction commenced in December 2016.
12/17		

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$12,185	\$12,570	\$385	Nov-23	Jul-26	32 mos.	\$8,551	\$739	(7,812)

## **Explanation of Changes**

• Project cost changed primarily due to inflation adjustments on Section 80 Rehabilitation Design/Construction Administration/Resident Inspection and Construction.

•	Schedule and spending changed for Section 80 Rehabilitation work to allow time for in-house evaluation.
СЕВ	Impacts
•	None identified at this time.

# S. 753 Central Monitoring System

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Improves system operability and reliability
☑ Extends current asset life
☑ Results in a net reduction in operating costs

To provide a modern centralized system for monitoring, coordinating, and controlling critical waterworks functions. Many existing MWRA facilities are monitored and operated using obsolete methods and equipment, which can hinder emergency response capabilities and prevent coordinated system operation. Two operations control centers are already operational, and various field facilities have been equipped with telemetry and communications equipment as part of this project.

## **Project History and Background**

MWRA has been converting to system-wide remote monitoring and control of essentially all hydraulic and hydroelectric operations. The original instrumentation used to measure operating parameters was incomplete, old, and in poor condition. In many cases necessary instrumentation did not exist. The system also lacked telemetry to provide centralized and immediate information on system performance, and the ability to remotely intervene when malfunctions occurred. Without telemetry, operating decisions had to be delayed until field personnel were dispatched to collect measurements. This was a cumbersome and undesirable mode of operation, particularly in emergency situations.

The lack of flow measurement within the water delivery system also impeded identification of sources of unmetered water. When fully implemented, the central monitoring system will generate instantaneous data on water flow and pressure in 18 subsystems beginning with the supply sources and ending at the delivery points to user communities. The data will assist operations staff in detecting and pinpointing leaks in the system. The response time for leak repair work can then be lessened, resulting in significant savings of water and reduction in potential MWRA liability for public safety and property damage.

The central monitoring project has grown from the initial automation of the Reservoir Road Pump Station to include eight other pump stations. Monitoring and control of water treatment facilities has expanded to include the Interim Corrosion Control Facility in Marlborough, the Cosgrove Disinfection Facility, the Norumbega Temporary Disinfection Facility and the Ware Disinfection Facility. In addition, water quality is monitored at seven locations from two Operations Control Centers. Real time Supervisory Control and Data Acquisition (SCADA) monitoring of Telog data is being established with 150 sites currently active. Operation control centers (OCCs) at the MWRA Chelsea and Clinton facilities provide remote monitoring and control of all the SCADA facilities. Also, as part of its Integrated Water Supply Improvement Program, MWRA built several new and upgraded facilities. These included the Nash Hill Covered Storage facility and the Loring Road Covered Storage facility. Carroll Water Treatment Plant, MetroWest Water Supply Tunnel, and the Norumbega Covered Storage facility. The existing system-wide backbone microwave communications network has been improved to connect these facilities to the waterworks communications system.

Sub-phase	Scope	Status
Study	Study to determine the implementation phases.	Completed
Design	Design of the replacement and rehabilitation of 34 existing master meter sites, 22 new master meter sites, 15 western revenue meter sites, 28 reservoir level instrumentation sites, ten pumping stations, eight pressure regulator control sites, four major throttle valve sites, six chemical feed sites, four hydroelectric sites, five weather stations, five sluice gate control sites, one stream gauging station, and other facilities.	Completed
Communications Structures	Installation of two radio towers, five antennas, one satellite dish, and an equipment shelter.	Completed
CS/Start-Up Services	Construction and startup services for the metropolitan Operations Control Center, as well as metering and monitoring construction.	Completed
Equipment Pre-Purchase	Purchase of instrumentation equipment, mechanical equipment, and new master meters.	Completed
Construction 1 – Reservoir Road and Cosgrove Pilots	Purchase and installation of equipment to automate the Reservoir Road Pump Station and an aqueduct monitoring system for use by the Cosgrove Intake and Shaft 4 operators. MWRA staff installed the equipment.	Completed
SCADA Implementation	Purchase of Supervisory Control and Data Acquisition System (SCADA) equipment for monitoring, control and metering sites.	Active
Microwave Equipment	Purchase of services and equipment necessary to allow MWRA to convert from analog to digital communications to continue to utilize the Commonwealth's Interagency Microwave System.	Completed
Construction – Operations Center	Construction of a 5,000 square feet center including an environmentally controlled computer room, a printer room, a control room, office space, and sanitary facilities in Chestnut Hill.	Completed

Sub-phase	Scope	Status
System Wide Backbone C.P. Construction– Monitoring & Control Communications Network	Improvement of the existing Waterworks system wide backbone including upgrades of microwave antennas at MDC Hill and Bellevue water tank and provision of new microwave antennas at five facilities.	Completed
Study and Design – Waterworks Monitoring & Control Communications Network	Provision of microwave antennas and radio equipment at twelve facilities.	Completed
Microwave Communication for Waterworks Facilities	Furnish and install seventeen microwave antennas (dishes), three 3-legged, 90- to 100-foot towers, one unpowered 80-foot steel monopole, and two prefabricated concrete shelters to house radio equipment with associated racks, cabinets and wiring.	Completed
Quabbin Power, Communication & Security Design CA/RI and Construction	Design and construction of 2.4 miles of power, and communication to Quabbin Aqueduct Shaft 12 and 1,500 feet to the DCR Boat Cove. Also, upgrading 9,000 feet of existing overhead power line from Winsor Power Station to Quabbin Lookout Tower to insure uninterrupted service of the communication network. Increased security will be provided at Shaft 12, Winsor Power Station, CVA Intake, Nash Hill gate house, William A. Brutsch Water Treatment Facility, DCR Boat Cove and Quabbin Administration building. The Verizon communications service needed for the security devices to communicate to the Chelsea Head-end Facility will be extended to support this function.	Completed

Sub-phase	Scope	Status
Waterworks SCADA/PLC Upgrades (CWTP SCADA Upgrades Design Programming RE and Construction, Other Design and Programming Services, Other Construction, and Other Equipment/Hardware)	Replacement of existing SCADA PLC's nearing their end of life with an updated PLC platform. New PLC's further provide enhanced security capabilities, continued vendors support and future reliability. Secondary goals include standardizing PLC logic and HMI graphics, and upgrading aging field instrumentation. During FY17 staff purchased equipment and hire outside support to replace an obsolete PLC at the Commonwealth Ave. West Pump Station. This work was complete in the spring of 2017. Additional work to upgrade the Brutsch Water Treatment facility chemical feed PLC through CIP purchases and use of In-house staff for design and installation will be complete in the fall of 2017. Inhouse work to scope out the design contract to upgrade the JJC WTP is nearing completion, with an engineering design services contract anticipated by the end of FY18 or beginning of FY19.	Active/Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$39,017	\$20,609	\$18,408	\$160	\$4,966	\$700	10,200	\$8,048

Project		Status as % is approximation based on project budget and expenditures. Quabbin
Status	52.9%	Power Communications & Security Construction was substantially complete in April
12/17		2017.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$39,040	\$39,017	(\$23)	Oct-31	Oct-31	None	\$5,457	\$10,200	\$4,743

## **Explanation of Changes**

- Project cost and spending decreased primarily due to Quabbin Power Communications & Security change orders partially offset by updated cost for Utility and Fees.
- Spending changed due to Waterworks SCADA/PLC Upgrades and Carroll Water Treatment Plant SCADA Upgrades Design Programming/Resident Engineering and Construction contracts being re-structured and rescheduled.

## **CEB Impacts**

• None identified at this time.

# S. 763 Distribution Systems Facilities Mapping

## **Project Purpose and Benefits**

☑ Contributes to improved public health
☑ Improves system operability and reliability

To produce a complete, up-to-date set of appropriate scale maps of all underground waterworks facilities, along with a comprehensive database inventory. Existing maps were outdated and unreliable, complicating emergency response, field repairs, and planning.

## **Project History and Background**

In 1995 MWRA did not have an adequate, updated set of maps of all of its underground waterworks facilities. Existing maps did not consistently show current conditions and were often incompatible or contradictory with MWRA databases. Engineering, operations, and emergency response were all affected by this inadequacy. Outdated maps hampered engineering because maps needed to be re-created. Field operations crews could not predict with certainty the results of valve shut-offs during repair efforts. The planning process was impaired because management did not have authoritative, consolidated data to evaluate pipe condition, age, C-Values, materials, and soil conditions. Additionally, the lack of a comprehensive understanding of the relationships between MWRA and local community pipe systems could result in service delays. The former mapping system created the possibility of incorrect actions, and in critical instances could have resulted in exacerbated property damage.

Reliable engineering records do not exist for certain sections of the distribution system. The Records Development sub-phase will create, update and automate record drawings and detail records for high priority areas.

Sub-phase	Scope	Status
Planning/Design	Creation of a complete set of 200 to 400 scale maps of the distribution system with an associated verified inventory of size, material, age, and condition of pipes.	Completed
Data Purchase	Purchase of project related data from Boston Edison.	Completed
Records Development (6525)	Automation of MWRA record drawings.	Future
Update of Record Drawings (7489)	Update record drawings and detail record information for selected water pipeline sections using information from detail records, plans, field books, surveys, and valve inventories. Establish procedures for continued updating and maintenance of detail record information.	Future
Water System Hydraulic Model (7613)	Upgrade and calibrate the water system hydraulic model.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$2,799	\$1,036	\$1,763	\$0	\$0	\$0	\$1,763	\$0

Project		Status as % is approximation based on project budget and expenditures. Update of
Status	37.0%	Record Drawings is expected to begin in FY20.
12/17		

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18 FY19 Chge.		FY18 FY19 Chge.		FY18	FY19	Chge.		
\$2,299	\$2,799	\$500	Apr-20	Jan-21	9 mos.	\$1,263	\$1,763	\$500

## **Explanation of Changes**

- Project cost changed due to new project added for Water System Hydraulic Model.
- Schedule shifted due to updating scope and sequencing of Update of Record Drawings and Records Development projects.
- Spending changed due to new project added for Water System Hydraulic Model.

## **CEB Impacts**

• No additional impacts identified at this time.

## S. 765 Local Water System Assistance Program

## **Project Purpose and Benefit**

☑ Contributes to improved public health
☑ Provides environmental benefits.

To provide loans to facilitate water system improvements in MWRA communities.

#### **Project History and Background**

The Local Water System Assistance Program is a critical piece of MWRA's Integrated Water Supply Improvement Program. In November 1999, the Board of Directors approved the Phase 1 Local Pipeline Assistance Program, supported through a Tax Exempt Commercial Paper (TECP) program, to make \$25 million available annually in loans to MWRA communities for pipeline relining and replacement in proportion to each community's share of total unlined pipe miles. Communities are required to pay back principal for each loan during a ten-year time period beginning one year after the project funding is approved. MWRA increased the initial total program budget to \$256,796,500 to provide funds for additional water system communities: Stoughton (\$4,480,000), Reading (\$1,916,000), Lynnfield (\$320,000), Dedham/Westwood (\$7,500), and Wilmington (\$73,000). The Phase 1 Local Pipeline Assistance Program concluded at the end of FY13 with a total of \$222.3 million in interest-free loans distributed to member water communities.

An additional \$210 million was added to the FY11 budget for the Phase 2 Local Water System Assistance Program. Community distributions from this program will be made from FY11 through FY20 with repayments scheduled for FY12 through FY30. The \$210 million is split with \$200 million allocated among 42 Metro-Boston/Metro-West communities and \$10 million allocated among three Chicopee Valley Agueduct (CVA) communities.

The Local Water System Assistance Program was expanded beginning in FY17 to include \$100 million in interest-free loans to communities solely for efforts to fully replace lead service lines. The *Lead Service Lone Replacement Loan Program* is budgeted over twenty years, but the pace of spending for the program will depend on the level of participation by communities, the communities' ability to work with individual homeowners, and future regulatory requirements.

In FY18 Local Water Assistance Program Phase 3 was added in the amount of \$292 million. Community distributions from this program will be made from FY18 through FY30 with repayments scheduled for FY19 through FY40.

Sub-phase	Scope	Status
Community Loans	Loans for MWRA water communities to replace and rehabilitate local water pipelines based on each community's share of total unlined pipe miles. These loans will be complete by the end of FY13.	Completed
Community Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Active
Local Water System Assistance Program Loans	This is a continuation of the program of providing interest-free loans to water system communities for pipeline replacement, cleaning and lining, water metering and other local water system improvements.	Active
Local Water System Assistance Program Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Active

CVA Loans	This is an extension of the Local Water System Assistance program to the CVA communities to provide interest-free loans to water system communities for pipeline replacement, cleaning and lining, water metering and other local water system improvements.	Active
CVA Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Active
Lead Service Line Replacement Loans	Replacement of lead service lines budgeted over a twenty year period beginning in FY17.	Active
Lead Service Line Replacement Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Active
Local Water System Assistance Phase 3 Loans	This is a continuation of the program (Phase 3) of providing interest-free loans to water system communities for pipeline replacement, cleaning and lining, water metering and other local water system improvements.	Active
Local Water System Assistance Phase 3 Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Future
Local Water System Assistance Phase 3 CVA Loans	This is an extension of the Local Water System Assistance program to the CVA communities to provide interest-free loans to water system communities for pipeline replacement, cleaning and lining, water metering and other local water system improvements.	
Local Water System Assistance Phase 3 CVA Repayments	Principal repayment over a ten-year period beginning one year after origination of the loans.	Future

Total Budget*	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$0	\$128,448	(\$128,448)	\$11,237	\$12,826	\$13,297	\$52,269	(\$191,954)

<sup>\*</sup>Total Loan Distributions less Loan Repayments.

Project		Through December, \$367.5 million in loans were distributed to member
Status	44.6%	communities.
12/17		

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18 FY19 Chge.		FY18 FY19 Chge.		FY18	FY19	Chge.		
\$0	\$0	\$0	May-46	May-46	None	\$51,224	\$52,269	\$1,045

## **Explanation of Changes**

• Spending change is primarily due to updated cash flows for Local Water Supply Assistance Program and CVA Loans.

## **CEB Impact**

•	The annual interest paid for the Commercial Paper program supporting the Local Water System Assistance
	Program initiative is over \$398,000 average per year based on the last 5 years of actual spending.

# S. 766 Waterworks Facility Asset Protection

## **Project Purpose and Benefits**

☐ Contributes to improved public health
☐ Extends current asset life
☐ Improves system operability and reliability

To protect the investment of MWRA ratepayers by ensuring timely replacement of equipment and systems.

## **Project History and Background**

This project was developed to ensure that MWRA maintains ongoing service while optimizing operations in its water facilities. This project in its current form addresses immediate critical facility and equipment issues. This project will eventually include five areas:

- 1. Equipment replacement (pumps, HVAC equipment, blowers, etc.).
- 2. Architectural projects (concrete corrosion, etc.).
- 3. Utilities projects (water, sewer, drainage, electrical wiring, heating system, etc.).
- 4. Support Projects (process control system upgrades, etc.).
- 5. Specialty Projects (instrumentation upgrades, fuel storage tanks, etc.).

While the current schedule indicates a completion date of 2023 for construction, the Waterworks Facility Asset Protection project will be ongoing throughout the useful life of the facilities.

Sub-phase	Scope	Status
Meter Vault Manhole Retrofits Design and Construction (6689/7479)	Retrofit approximately 195 meter manholes.	Future
Design CA/RI for Construction of Elevated Water Storage Tank Repainting/Improvements (6832) and Construction (7493), Steel Tanks Repainting at Bellevue 2, Turkey Hill, and DI (7601)	Design and construction to repaint, replace cathodic protection systems and make necessary improvements to 5 steel water storage tanks (Bellevue 1, Bellevue 2, Park Circle, Turkey Hill, and Walnut Hill). All were painted in 2000. Bellevue 1 and 2 are in the same service area (SEH); Park Circle, Turkey Hill and Walnut Hill are in the same service area (NEH). SCADA and security upgrades/improvements and operational upgrades such as mechanical mixers, emergency generators will be made at each site as well as siting prefabricated buildings at two of the sites. As noted, the various tanks are redundant to each other. Redundancy is maintained by performing this project and keeping the tanks in good condition and in service. Repainting at Bellevue 2, Turkey Hill, and DI added as a separate contract.	Future
Waltham Pipe Bridge Replacement (6910)	Replacement of approximately 100 feet of 30-inch steel pipe over commuter rail tracks in Waltham including a bridge crossing.	Completed

Sub-phase	Scope	Status
Design and Construction Cosgrove Valve Replacement (7064/7065)	Replacement of isolation sluice gates at Cosgrove Intake to improve reliability for emergency shut down of Cosgrove facility and to isolate new sliding sleeve valves to facilitate preventive maintenance and any future corrective maintenance.	Future
Transformer at Cosgrove Intake Building (7228)	Replacement of a 45 year old main service transformer and load break switch. This transformer supplies power to the Cosgrove Intake Building. If it were to fail, the building would be running on generator power for a significant period of time.	Completed
Covered Storage Tank Rehabilitation Design and Construction (7385/7482)	Rehabilitation of Fells and Loring Road Covered storage facilities commencing in FY19. The valves, sluice gates, and piping should be considered for rehabilitation by this time, as each facility will be more than 20 years old.	Future
Electrical Distribution Upgrades at Southborough (7425)	Upgrade of existing 13.8kV distribution system that supplies the various buildings at Southborough Complex due to on-going service disruptions. Install electrical metering equipment to better manage electrical use in facility.	Future
Water Meter Upgrade Replacement Design CA/RI (7542) and Construction (7453)	Replace six older Venturi meters in Boston and upgrade to above ground cabinets. This will provide more accurate and reliable meter data since current meters are beyond their life expectancy.	Future
Beacon Street Line Repair Design CA/RI (7474) and Construction (7458)	Repair of 48" water main in Brookline serving Boston Meter 44. This main provides important water supply redundancy to Meter 60 which serves the Longwood Medical Center in Boston. Construction Contract 7458 was awarded with an NTP dated June 23, 2016. Project substantial completion achieved March 31, 2017.	Completed
Cosgrove/Gillis PS/Cottage Farm CSO Flat Roof Replacement (7022)	Replace the damaged roofs that leak at Cosgrove, Gillis Pump Station, and Cottage Farm CSO Facility. There are issues around roof penetrations and along the parapet wall at Cosgrove.	Future
New Roofs at Water Pumping Stations Design/CA/RI (7628) and Construction (7626)	Replace pump station roofs at Belmont (membrane), Brattle Ct (slate), Spring St (membrane), Newton St (membrane) and Lexington St in Belmont, Arlington, Waltham and Brookline.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$38,132	\$2,367	\$35,764	\$65	\$1,886	\$7,763	\$28,040	\$7,659

Project		Status as % is approximation based on project budget and expenditures. Transformer
Status	6.2%	Replacement at Cosgrove Intake Building contract was completed in July 2012.
12/17		Beacon Street Line Repair construction was substantially complete in April 2017.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$32,249	\$38,132	\$5,883	Jul-23	Jul-26	36 mos.	\$28,110	\$28,040	(\$70)

## **Explanation of Changes**

- Project cost changed due to updated cost of Steel Tanks Construction including a separate contract broken out from Steel Tank Improvements Construction contract for Steel Tanks Repainting at Turkey Hill, Bellevue Hill II and Deer Island tanks. Also, new project added for New Roofs at Water Pumping Stations.
- Project schedule and spending changed primarily due to several schedule changes including Covered Storage Tank Rehabilitation, Steel Tank Improvements, and Cosgrove Valve Replacement work.

## **CEB Impacts**

• None identified at this time.

# Business and Operations Support

# S. 881 Equipment Purchase

## **Project Purpose**

To provide critical equipment for improved maintenance and operations at MWRA facilities.

## **Project History and Background**

This project includes the purchase of large vehicles, purchase and installation of security equipment at various MWRA facilities, and purchase of an Inductively Coupled Plasma-Mass Spectrometer (ICP-MS) for MWRA's Central Laboratory. The security equipment and installation component of the project includes the design and installation of security systems at MWRA facilities. MWRA is ranking facilities and locations with respect to the critical nature of service delivery, with an emphasis on the waterworks system. This ranking will frame the extent and scheduling of the security improvements for each specific site.

Sub-phase	Scope	Status
Security Equipment & Installation	Design and installation of security systems at various MWRA facilities and sites.	Active
ICP-MS Lab Testing Equipment	Purchase of Inductively Coupled Plasma – Mass Spectrometer to replace a 14-year-old instrument and expand the laboratory's high sensitivity metals testing capacity. Equipment was purchased in 2008.	Completed
FY14-18 Major Laboratory Instrumentation	Purchase major laboratory instrumentation, such as high resolution GC-MS or LC-MS to provide for lab testing of newly regulated contaminants.	Active
Vehicles:		
High Lift Fork Loader (Lull)	Purchase High Lift Fork Loader (Lull) to move equipment and materials at Deer Island.	Completed
Prior Vehicle Purchases	Vehicle purchases including TV Inspection Truck, Two Back Hoes, Vactor Truck, Water Service Truck, Bucket Machine, Excavator, Grove Crane, Land Fill Loader, Power Sweeper/Catch Basin Cleaner, Front-End Loader, Two Dump Trucks, Crane, and International Tractor/Trailer.	Completed
Ramp Truck	Purchase of Ramp Truck to support Fleet Services.	Completed
Street Sweeper	Purchase of Street Sweeper to support MWRA facilities and community assistance.	Completed
Contaminant Monitoring Equipment	Contaminant monitoring equipment including radiological monitoring, contaminant monitoring system panel replacement or expansion, and buoys.	Future
FY11-13 Vehicle Purchases	Vehicle purchases planned for FY11-13.	Completed
FY14-18 Vehicle Purchases	Vehicle purchases planned for FY14-18.	Active
FY19-23 Vehicle Purchases	Vehicle purchases planned for FY19-23.	Future

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$33,167	\$20,323	\$12,843	\$1,500	\$9,716	\$2,240	\$11,343	\$0

Project Status 12/17	62.4%	Status as % is approximation based on project budget and expenditures. Purchase and installation of security equipment is in process and will continue into FY23.
----------------------------	-------	---

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$29,408	\$33,167	\$3,759	Jun-23	Jun-23	None	\$5,946	\$11,343	\$5,397

## **Explanation of Changes**

• Project cost and spending increased primarily due to revised cost estimates for Contaminant Monitoring Equipment, FY19-23 Vehicle Purchases, and Major Laboratory Instrumentation Phases.

## **CEB Impacts**

No impacts identified at this time.

## **S.925 Technical Assistance**

## **Project Purpose**

To ensure ready access on an as needed basis, to professional and technical services not available or not cost-effectively provided by in-house staff.

## **Project History and Background**

Efficient implementation of MWRA's Capital Improvement Program and other projects often requires specialized skills and technical assistance that are not available from in-house staff. This project ensures ready access to a variety of services through a series of task order contracts with pre-set limits. Task orders are used when immediate expertise on projects is required. When a task order is complete, the expense is transferred to the appropriate capital project or Current Expense Budget cost center.

#### Scope

Sub-phase	Scope
Technical Assistance	MWRA technical assistance contracts include the following: surveying, hazardous materials assessment, and land appraisals.

Status: MWRA uses technical assistance contracts in support of various CIP and CEB projects.

## **Expenditure Forecast** (in \$000s)

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$ 1,150	\$0	\$1,150	\$0	\$0	\$383	\$1,150	\$0

#### Changes in Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$1,150	\$1,150	\$0	Jun-20	Jun-21	12 mos.	\$767	\$1,150	\$383

## **Explanation of Changes**

Schedule and spending shifted to reflect continuation of contracts for an additional year.

## **CEB Impacts**

 When Technical Assistance contracts are used to support a project in the operating budget, the costs are charged to the Current Expense Budget (CEB).

# S. 933 Capital Maintenance Planning/Development

## **Project Purpose**

To optimize the efficiency and effectiveness of MWRA maintenance practices by developing and implementing a strategic maintenance plan for MWRA assets.

#### **Project History and Background**

MWRA is responsible for rehabilitating, repairing, and maintaining the regional water and sewerage system infrastructure. Since its assumption of the ownership and operations of the water and sewer systems in 1985, MWRA has undertaken an ambitious program of capital improvements to the systems, with estimated expenditures of more than \$7 billion for fiscal years 1986 through 2013.

Given the significant value and critical nature of these assets, system maintenance is of paramount importance. This project helps MWRA optimize maintenance practices by evaluating alternative approaches to equipment, infrastructure and facility maintenance, recommending a maintenance strategy, implementing a pilot program to test the recommended strategy, and developing a plan to implement the recommended strategy throughout MWRA.

In the FY01-03 CIP the Capital Maintenance Planning/Development project was part of the first phase of the Wastewater Facilities Asset Management Program (FAMP). This initial phase of FAMP consisted of evaluating maintenance strategies for equipment and systems at Deer Island, and led to the adoption of Reliability Centered Maintenance (RCM) as the maintenance strategy for Deer Island and subsequently the rest of MWRA. As a result of the decision to implement RCM throughout MWRA, the Capital Maintenance Planning/Development project was created. The remaining FAMP components, which address equipment system monitoring, Maximo improvements, and improved business practices at Deer Island, have been renamed Deer Island Treatment Plant Asset Protection.

The purpose of technical assistance contracts is to make available, on a continuing basis, the services of qualified, professional engineering firms to assist MWRA staff on engineering study and/or design initiatives. The contracts involve the engineering disciplines of architecture, civil, structural, geotechnical, surveying, environmental and sanitary, mechanical and process, fire protection, electrical, control systems, chemical, corrosion and odor control, permitting and security. These agency-wide technical assistance contracts supplement in-house staff on high-priority or unanticipated projects, or provide expertise on short-term assignments requiring specialized disciplines that are not cost effective for MWRA to maintain on an in-house basis and will ensure that adequate resources are available to quickly and comprehensively respond to MWRA's needs, particularly when emergency or unanticipated situations arise.

## Scope

Sub-phase	Scope	Status
Inventory & Evaluation Phases 1 & 2	Development of a comprehensive, strategic maintenance plan for MWRA. (Completed by July 2005).	Completed
As-Needed CS/REI Phases 1 & 2	As-Needed Construction Services/Resident Engineering Inspection Services. Phases can be used in circumstances when additional Resident Engineers or senior level Resident Engineers with special expertise are required as well as CS/REI services for in-house or as-needed technical assistance design contracts.	Future
As-Needed Design	Contracts for professional design and/or technical assistance services for either wastewater or waterworks system improvement projects to supplement existing engineering resources for specialized and/or complex engineering issues. Sub-phases consist of As-Needed Design phases 1-17.	Completed/Active

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$23,693	\$13,152	\$10,541	\$1,233	\$4,261	\$3,558	\$9,308	\$0

Project		Status as % is approximation based on project budget and expenditures. All tasks in
Status	57.7%	Inventory & Evaluation Phases 1 & 2 are complete. As-Needed Design 7 was
12/17		substantially completed in July 2012. As-Needed Design 8 was substantially completed
		in February 2012. As-Needed Contracts 9 and 10 were substantially complete in
		January and February 2014, respectively. Contract 11 was completed in August 2015.
		Contract 12 and contract 13 were completed in July 2016 and August 2016,
		respectively. As-Needed contracts 14-15 commenced in June 2016.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
15,208	\$23,693	\$8,485	Jun-18	Sep-21	39 mos.	\$579	\$9,308	\$8,729

## **Explanation of Changes**

 Project cost, schedule and planned spending increased due to new phases added for As-Needed Construction Services/Resident Engineering Inspection Contracts 1 and 2 as well as continuation of as-needed design program by adding As-Needed Design Contracts 11 and 12.

## **CEB Impacts**

None identified at this time.

# S. 934 MWRA Facilities Management and Planning

## **Project Purpose**

To improve MWRA operations by consolidating projects and providing a central point of review and decision making for space planning decisions.

## **Project History and Background**

This project consolidated existing MWRA projects (DI Maintenance Facilities and DI CSB Demolition) to provide a central point of review and decision making for space planning decisions across the organization.

The project will cover work to rehabilitate or demolish the old Administration Building on Deer Island as the building has deteriorated and certain structures need to be upgraded to current standards if it is to remain occupied. The project also included funds for demolition of the CSB (Construction Support Building) which was built as a temporary structure and has also deteriorated. The CSB Demolition contract was completed in September 2009.

## Scope

Sub-phase	Scope	Status
Design & Engineering Services	Design and engineering services to support space plan.	Future
Facilities Construction	Construction of modifications to MWRA facilities in accordance with space plan.	Completed/Future

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$2,151	\$371	\$1,780	\$0	\$0	\$140	\$1,780	\$0

Project Status 12/17	17.2%	Status as % is approximation based on project budget and expenditures.  CSB/Demolition contract was substantially complete in September 2009. Records  Center Shelving and Moving to the interim warehouse/records center was completed in the carrier of 2000. Remaining work is to demolish add Administration Building on
		in the spring of 2009. Remaining work is to demolish old Administration Building on DI. Some rehabilitation work will need to be done as well.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY17	FY18	Chge.
\$2,151	\$2,151	\$0	Sep-20	Sep-20	None	\$1,780	\$1,780	\$0

## **Explanation of Changes**

• N/A.

## **CEB Impacts**

None identified at this time.

# S. 935 Alternative Energy Initiatives

## **Project Purpose**

A comprehensive "green energy" initiative that is expected to bring solar, wind and hydroelectric power either alone or in combination to a number of MWRA facilities

#### **Project History and Background**

This project was originally included under Deer Island in previous budget cycles. Building upon its track record in sustainable resource use – most notably dramatic system-wide reductions in water demand, 100% beneficial reuse of biosolids, self-generation of approximately 25% of Deer's Island power needs, and maximizing revenue through hydropower – MWRA continues to work aggressively to use its resources efficiently, respond appropriately to climate change, and reduce the environmental impacts of its daily operations. Key initiatives completed to-date include: A comprehensive "green energy" initiative that brought solar, wind and hydroelectric power to a number of MWRA facilities.

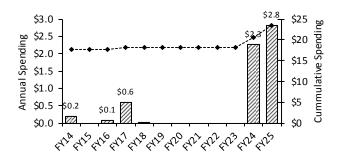

Sub-phase	Scope	Status
DI Solar Residuals Odor Control (ROC)	Design and construction of 100 kw photovoltaic array. Projected annual output estimated at 105,000 kwh.	Completed
DI Wind	Design and construction of 2 600kw solar wind turbine systems. Projected annual output estimated at 2,300,000 kwh. Project added to include repair/rehabilitation contract.	Completed
DI Solar Maintenance/Warehouse	Design and construction of 180kw photovoltaic array. Projected annual output estimated at over 200,000 kwh. Project funding includes \$735K million from the American Recovery and Reinvestment Act ("ARRA").	Completed
Future DI Wind (Battery D Location – 7270)	Design and construction of up to two 600 kw wind turbines at Deer Island. Projected annual output estimated at 1,150,000 kwh per turbine.	Future
DI Solar Power Purchase Agreement (PPA)	Design and construction of 456 kw photovoltaic array through a third party 20 yr Power Purchase Agreement. Projected annual output estimated at 520,000 kwh. Project partially subsidized by \$1.1M from ARRA program. No capital costs to MWRA; pay for electricity generated.	Completed
Loring Road Hydro	Construction of a 200 kW hydropower turbine/generator at Loring Road. Projected annual output estimated at 1,200,000 kwh. Project funding includes \$1.5 million from the ARRA program.	Completed
Energy Adv Con Services	Consultant for comprehensive energy advisory services on throughout the Authority.	Completed
Technical Assistance	Various technical assistance contracts to aid solar, wind, and hydro initiatives.	Completed

		Completed
Carroll WTP Solar Construction	Installation of photovoltaic cells with generating capacity of 496 kw at Carroll WTP plant. Projected annual output estimated at over 616,000 kwh. Project funding includes \$2.2 million from the ARRA program.	
Charlestown Wind	Design and construction of 1.5 MW wind turbine system. Projected annual output estimated at 3,000,000 kwh. Project funding includes \$4.8 million from the ARRA program.	Completed

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$23,131	\$18,053	\$5,078	\$20	\$876	\$0	\$0	\$5,058

## **Alternative Energy Initiatives**

Project Status	78.2%	Status as % is approximation based on project budget and expenditures. Carroll Water Treatment Solar and Loring Road Hydro Construction were completed in May
12/17	70.270	2011. Carroll Water Treatment Plant Solar Construction and Charlestown Wind
		Project were completed in 2011. DITP Solar PPA was completed in 2011.

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$23,271	\$23,131	(\$140)	Dec-20	Dec-24	48 mos.	\$4,883	\$0	(\$4,883)

## **Explanation of Changes**

• Project cost, schedule and spending changed due to Deer Island Wind Construction (Battery D Location) being re-scheduled due to project priorities.

## **CEB Impacts**

•	None identified at this time.	

## Information Technology (IT) Strategic Plan

The Board recommended that staff develop a five-year strategic plan for the Management Information Systems Department (MIS) to ensure alignment of business goals, objectives, processes, and technology within the Authority. At the July 13, 2011 meeting, the Board approved the recommendation of a Selection Committee to award a contract to Westin Engineering, Inc. (Westin) for the development of a Five-Year Information Technology Strategic Plan (IT Plan). Westin's scope of work included evaluating MWRA's current applications, IT systems and infrastructure, as well as the MIS Department's organizational structure and staffing requirements. After Westin completed its review, it was charged with developing plans for future improvements to MWRA's IT systems and organizational approach and structure.

Based on the recommendation of the Five-Year IT Strategic Plan which was conducted during FY12, the structure of the MIS projects going forward were classified into four major programs, as follows:

**Application Improvement Program** – This program continues MWRA's efforts to update and enhance a wide range of applications to improve efficiencies of business processes and effectiveness of the staff while ensuring the availability, and integrity of the MWRA's data resources. This program relates to 123 applications with 227 modules that support various business functions across the Authority. Seventy-seven, or 63%, of these applications are commercially available off the shelf packages.

**Information Security Program** – This program focuses on the resiliency and sustainability of the MWRA's data security practices. MIS will establish policies, procedures, and information security awareness. The work under this subprogram will also review each IT system and make recommendations to improve its security profile in accordance with the Department of Homeland Security Guidelines.

**Information Technology Management Program** -This program improves the organization of MIS and the oversight processes for selecting and implementing IT solutions throughout the MWRA. To accomplish those goals, the study recommends that MWRA:

- Develops an Information Technology Service Management (ITSM) Program to improve service delivery.
- Adopts a Standardized Software Development Lifecycle (SDLC) to improve the quality of software delivered.
- Implements a more robust Project Management Program to improve the predictability of deliverables and cost associated with information technology projects.
- Updates the IT Steering Committee to ensure that the business and technology priorities of the MWRA are aligned and are being met.

**Information Technology Infrastructure Program** - This program assesses and implements consolidated and optimized versions of core IT infrastructure elements to improve and optimize data management practices, including: storage, backup, archive and purge processes, and technologies. These improvements cover the 1,238 desktops, 160 laptops, 105 servers, 20 Wide Area Network Circuits and associated ancillary equipment, as well as the 18 Terabytes of data managed by MIS.

## S. 940 Applications Improvements Program

### **Project Purpose**

To develop, improve, and procure management information systems (MIS) applications to improve efficiencies of business processes associated with managing the operations and support divisions.

### **Project History and Background**

Currently there are 123 applications that have 227 modules. Seventy-seven of these applications are "commercially available off the shelf" (COTS) packages. These applications support business functionality for the Operations, Administration, Finance, Internal Audit, Public Affairs and Law Divisions along with the Office of Emergency Preparedness and the Office of the Executive Director. This program will continue the good work started in previous years to update and enhance a wide range of applications to improve efficiencies of business process and effectiveness of the staff performing the processes while ensuring the availability, integrity and confidentiality of the MWRA's data resources. It will further enhance the integration and availability of data to provide a more holistic view of the overall operational status with seamless access to the detailed data.

The application improvement program includes upgrades to applications such as Lawson, Maximo, LIMS and PIMS. The program also includes significant expansion to GIS, Mobile Integration, and Enterprise Content Management technologies.

This program is scheduled to be completed by FY26.

**Scope** – The table describes the CIP phases and associated projects.

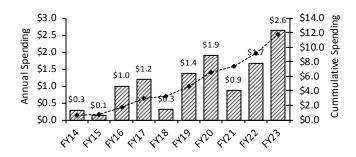

Sub-phase	Scope	Status
GIS Applications &	Expand role of GIS technology for scientific, environmental and engineering	Active
Integration	applications. Projected expenses include Hardware, Installations, Support,	
	Software, Customizations and Technical Support. This project will assess the	
	current state of the GIS Program and make recommendations for	
	improvements in the future state.	
Lawson Enhancements	New releases and implementation of ERP System hardware, environment,	Future
	and application replacement or upgrades. Implement contract management,	
	strategic sourcing and process flow integrator modules.	
Maximo Upgrade	Complete migration to Maximo 7.5, acquire new modules and add richer	Active
	integrations (e.g. GIS). Hardware replacements and enhancements to the	
	system based on current useful life.	
Pre-Treatment	The system is used by the MWRA to monitor the pretreatment program	Future
Information Mgmt	pursuant to MWRA's NPDES permit and EPA regulations. Hardware	
System (PIMS)	replacements and enhancements to the system based on current useful life.	
Enhancements	This project will assess the current state of the PIMS implementation to	
	develop and execute a plan for addressing functional issues and complying	
	with new regulations.	
Enterprise	Implement automated tools to support the compilation of monthly and	Active
Performance	quarterly performance reports, including tools for extracting data from	
Management	existing operational applications, managing data quality, generating reports	
Enhancements	and automating report assembly.	

Sub-phase	Scope	Status
Enterprise Content Management	Implement an Authority-wide Content Management Program to address dependence upon paper records, support records management and improve access to information, streamline workflows and replace several department-level solutions.	Active
Mobile Integrations	Define integrated business strategy for mobile computing. Expand the application of mobile computing to meet the Authority's business requirements in the Laboratory, DITP Operations and Maintenance and other Operations and management areas.	Active
LIMS Enhancement	Laboratory Information Management System (LIMS) Enhancements:  The e-Lab is a new project that will improve productivity of staff and reduce the amount of paper being generated. This initiative adds a new module into LIMS called Electric Laboratory Notebook (ELN). ELN will replace paper based laboratory notebooks with tablets that are connected to LIMS and integrated into the core product. This project includes the purchase of tablets, ELN licenses and services required to implement the new module.	Active

## Expenditure Forecast (in \$000s) and Project Status

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23

## **Explanation of Changes**

- Project cost and spending changed due to updated cost estimate for PIMS Enhancements, Enterprise Content
  Management, Lawson Enhancements, and LIMS Enhancements Implementation to account for MIS initiatives
  for the next five years.
- Schedule changed primarily due to updated schedule for Lawson Enhancements as well as PIMS Enhancements, Enterprise Content Management, and LIMS Enhancements.

## **CEB Impacts**

 Annual increased costs associated with Lawson Enhancements of \$75,000 in FY26 for the Application Improvement Program.

## S. 942 Information Security Program

### **Project Purpose**

To ensuring the availability, integrity and confidentiality of the MWRA's data resources through the selection and implementation of Information technology solutions associated with cyber security.

## **Project History and Background**

This program focuses on the resiliency and sustainability of the MWRA's data security practices. The projects associated with this program will establish policies, procedures and an information security awareness program for all of the MWRA. This program includes designing both an information security program and electronic security plans in order to provide a more formal, comprehensive IT security framework that is compliant with Federal Standards

This program is scheduled to be completed by FY23.

**Scope** – The table describes the CIP phases and associated projects.

Sub-phase	Scope	Status
IT Security Program	Information Security Program Development and Implementation Project — To develop and coordinate an IT Security program to provide a holistic approach to physical and cyber security efforts. Define and coordinate implementation of an Authority-wide information security plan, electronic security plans, and a cyber security plan including standards, policies, and practices. This project started in FY13 and ended in FY14.	Completed
	Information Security Awareness Program Development and Delivery Project – Formal and informal activities to inform staff (including contractors and business partners) of the information security risks associated with their activities and their responsibilities in complying with MWRA policies and procedures designed to reduce these risks. This project started in FY13 and was completed in FY14.	Completed
	Information Security Protection Infrastructure Upgrade – Upgrade the existing hardware and software infrastructure that protects MWRA's information from internal and external threats. These infrastructure components are at the end of their useful life, and need to be upgraded in order to keep MWRA's protection current and vigilant. This project also includes installation and configuration services.	Active
Electronic Security Plans	Electronic Security Plan Development and Implementation Project - Coordinate a system-by-system development of Electronic Security Plan (ESP) to apply security controls and standards to each system within MWRA's application portfolio.	Future

## **Explanation of Changes**

- Project cost and spending changed due to updated cost estimates for Information Security Protection Infrastructure Upgrades and Electronic Security Plan Implementation to account for MIS initiatives for the next five years.
- Schedule changed primarily due to revised schedule for Information Security Protection Infrastructure Upgrades and Electronic Security Plan Implementation.

## **CEB Impacts**

None identified at this time.

## S. 944 Information Technology Management Program

### **Project Purpose**

To improve the overall efficiencies in how MIS delivers IT services and to more effectively adapt to the changing business needs associated with managing the operational and administrative systems of the Authority.

### **Project History and Background**

This program and associated projects are intended to bring to the MWRA a new and improved Management Information Systems Department and an improved oversight process for selecting and implementing Information Technology solutions throughout the MWRA by establishing:

- a. An Information Technology Service Management (ITSM) Program to improve service delivery
- b. A Standardized Software Development Lifecycle (SDLC) to improve the quality of software delivered
- c. A Project Management Program to improve the predictability of deliverables and cost associated with information technology projects
- d. An updated IT Steering Committee to ensure that the business and technology priorities of the MWRA are aligned and are being met
- e. Organizational changes to reflect the changing technologies and processes

This program is scheduled to be completed by 2020 at an estimated cost of \$0.6 million.

**Scope** – The table describes the CIP phases and associated projects.

Sub-phase	Scope	Status
Implement IT Task	Implement formal practices for allocating IT resources among competing	Completed
Force	demands and prioritizing requests for IT services. Define and implement	
	roles and responsibilities for allocation of technology related policies and standards.	
Service Delivery and	Service Management refers to all the activities, plans, and processes an	Future
Best Practice	organization uses to design, deliver, and manage service delivery for its	
	customers. Customers can request services through an IT service catalog,	
	where IT publishes the services it offers.	
MIS Reorganization	Reorganize MIS Department to better align responsibilities with current and	Completed
and Change	emerging requirements. Implement a focus on problem resolution and	
Management	customer service issues.	
	Change Management – Enhance capabilities for planning and implementing	Completed
	organizational change, integrated with software development lifecycle,	
	project management and information technology service management.	
IT Project Portfolio	Implement a set of procedures, standards, tools and techniques that will	Future
Management	improve the predictability of deliverables and cost associated with	
	information technology projects.	
Software	Implement as set of procedures, standards, tools and techniques that will	Future
Development Life	ensure that the software development lifecycle produces high quality	
	software that meets or exceeds expectations, based on requirements, by	

Cycle Tools	delivering software which moves through each clearly defined phase, within	
	scheduled time-frames and cost estimates.	

## Expenditure Forecast (in \$000s) and Project Status

Project		Status as % is approximation based on project budget and expenditures.
Status	0%	
12/17		

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY18	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$923	\$636	(\$287)	Jun-19	Dec-20	18 mos.	\$923	\$636	(\$287)

## **Explanation of Changes**

• Project cost, schedule and spending changed primarily due to updated cost and schedule for Software Development Life Cycle contract.

## **CEB Impacts**

None identified at this time.

## S. 946 IT Infrastructure Program

### **Project Purpose**

To assess and implement consolidated and optimized versions of equipment and data bases and improve and optimize data management practices.

## **Project History and Background**

The MWRA currently owns and operates 1,238 desktops, 108 servers, 20 Wide Area Network Circuits and associated equipment. It also manages in excess of 7 Terabytes of data stored in 148 data bases; and an additional 12 Terabytes of unstructured data on file shares. This program will assess and implement consolidated and optimized versions of these core IT infrastructure elements as utility like services and commodities. Furthermore, it will look to improve and optimize data management practices, including: storage, backup, archive and purge processes and technologies.

This program is scheduled to be completed by FY22.

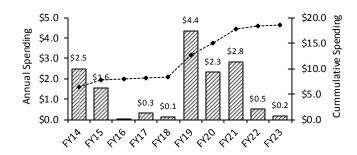

**Scope** – The table describes the CIP phases and associated projects.

	Data center Upgrades – The Chelsea facility hosts the Computer Center, Operations Control Center (OCC) and the primary Emergency Operations Center. Specialty fire suppression systems, UPS equipment, environmental control and alarming systems, console apparatus, etc. were purchased in 2000/01 with the facility opening. All of this equipment has a useful life of approximately 15 years required replacement in FY15.	
	Network Infrastructure Project - Plan and coordinate upgrades to IT infrastructure elements, including networks, servers, storage, etc. The Net 2020 DITP/Southborough includes Copper cable upgrade to CAT6 since the existing cabling and fiber are non-compliant with current standards. The new standards and fiber upgrade will support increased backbone capacity for 10GIG.	Active
	Storage Upgrades - Implement recommended IT infrastructure changes that include enhancements to capacity and performance of networking and communications, storage, backups, server consolidation, disaster recovery, and integration approach and tools.	Active
	Backup Upgrades – Evaluate need for tape backup versus alternative means for different record types. Plan and implement backup capabilities to expand backup coverage (user data).	Active
	Server Management – Develop specifications for server hardware and software including ability to implement greater virtualization. Seek opportunities to standardize operating systems, and hardware, for greater ease of support.	Active
	Enterprise Application Integration – Develop systems architecture as framework for infrastructure changes. Coordinate activities needed to support Enterprise Application Integration, Data Management and application improvements. Adopt Service-Oriented Architecture (SOA). Select SOA toolkits and approaches that maximize ability to integrate existing and current applications.	Active
E-Mail Upgrades	E-Mail Upgrades - Complete migration to Exchange 2010. Increase default attachment size. Substantially increase total email capacity. Establish procedures for managing PST files, including managing on local hard disks, archiving, and automated backups. Explore automation tools for managing email, including automated archiving, automated backup, legal holds, indexing and search.	Active
Enterprise Data Management	Enterprise Data Management - Develop an Authority-wide data architecture that maximizes benefit from data capture and ongoing maintenance. Implement Authority-wide data modeling and management, to standardize data access across multiple systems for a consistent view of the Authority across all business units.	Active

## **Expenditure Forecast (in \$000s) and Project Status**

Total Budget	Payments thru FY17	Remaining Balance	FY18	FY14-18	FY19	FY19-23	Beyond FY23
\$15,974	\$5,679	\$10,295	\$134	\$4,522	\$4,354	10,161	\$0

## **IT Infrastucture Program**

Project		Status as % is approximation based on project budget and expenditures.	1
Status	35.7%		
12/17			

## Changes to Project Scope, Budget, and Schedule

Project Cost			Scheduled Completion Date			FY19-23 Spending		
FY18	FY19	Chge.	FY18	FY19	Chge.	FY18	FY19	Chge.
\$10,271	\$15,974	\$5,703	Jun-19	Dec-22	42 mos.	\$3,359	\$10,161	\$6,802

## **Explanation of Changes**

Project cost, schedule, and spending changed due to cost estimates for Net 2020/Net 2020
 DITP/Southborough, Server Management, Enterprise Application Integration, Storage Upgrades, and Enterprise
 Data Management to account for MIS initiatives for the next five years.

## **CEB Impacts**

 Annual incremental cost for Storage Upgrades are estimated at \$100,000 in FY22; and \$101,000 for the IT Infrastructure Program in FY22.

## **APPENDIX 2**

# Expenditure Forecast Report with Planned NTP and SC dates

## **Understanding the Expenditure Forecast**

Capital expenditure forecasts, sometimes referred to as project cashflows, are presented in this section of the FY18 Proposed CIP document. Expenditure forecasts are accrual based, i.e., projected expenditures are estimated based on when services are expected to be rendered. Projects appear in this report in the same order they appear on-line, organized by capital program area. Grant and loan receipts for various projects and programs appear in the section following the expenditure forecasts.

The following presents a description of each column in the expenditure forecast tables:

## Project and Subphase Names

The first column of the expenditure forecast identifies the organizational hierarchy of the CIP: capital program area (e.g., Wastewater System Improvements), program category (e.g., Interception and Pumping), project (e.g., Quincy Pump Facilities), and sub-phases (e.g., Facilities Plan/EIR). Sub-phases represent awarded and unawarded contracts.

#### **Contract Number**

To the left of each project name is a string of nine numbers. These numbers are assigned by the Rates and Budget Department, and are the number reference for the sub-phase in MWRA's capital budgeting database.

The first string is a five-digit number representing the MWRA Lawson Activity Management System sub-phase number. Project budgets and expenditures are tracked by this account number.

Following the five-digit sub-phase number is a four-digit number representing the contract reference number in MWRA's contract management system. This reference number is used to access contract information such as the award amount, change order activity, and processed invoices.

## Notice to Proceed (NTP) and Substantial Completion (SC)

Project schedules are tracked by two key milestones: Notice to Proceed and Substantial Completion. These milestones indicate the expected start and end dates for contract activity.

#### **Contract Value**

The Contract Value represents the budget amount for the capital program, program category, project, or sub-phase. For unawarded contracts, the contract amount is based on a cost estimate. For awarded contracts, this amount includes the award amount plus any change orders, amendments, and purchase orders accounted for prior to completing the budget.

## Payments through FY17

Payments through FY17 include actual and accrued expenditures since the inception of the contract through the end of FY16.

## Remaining Balance

Remaining Balance is calculated by subtracting Payments through FY17 from the Contract Amount. This amount is then spread in the columns to the right, for FY14-18, FY19-23, and Beyond FY23.

## APPENDIX 2 FY19 PROPOSED FIVE-YEAR CIP BY MAJOR PROGRAM CATEGORY FY19 by Quarters

#### **Master Plan Priority Ratings - Wastewater**

<u>Priority One</u> <u>Critical/Emergency</u> Risk moderate to high/Consequence very high

Projects which:

Resolve emergencies or critical threats to public health or worker health and safety

Prevent imminent failure of the system and significant loss of service

Priority Two Essential Projects

Risk variable/Consequences high

Projects which are essential to:

Critical facility assessment

Fix existing reliability or capacity problems during dry weather flow conditions

Reduce sanitary sewer overflows from the MWRA system

Address facilities in poor condition where the ability to provide uninterrupted service or adequate flow is compromised.

Upgrade or maintain emergency backup facilities in poor condition

Meet minimum hydraulic performance requirements and service needs

Implement MWRA's approved CSO control plan

Maintain wastewater effluent and residuals quality

To comply with mandated legal, regulatory or statutory requirements

Priority Three Necessary Projects Risk moderate to high/Consequence moderate to low

Projects which are necessary to:

Improve public health and worker safety

Restore the system's infrastructure where it is seriously deteriorated

Improve hydraulic performance

Significantly improve the effectiveness, efficiency, or reliability of system operations and service delivery including where appropriate, the ability to monitor the system

Maintain consumer confidence

#### <u>Priority Four</u> <u>Important Projects</u>

Risk moderate/Consequences low

Projects which are important to:

Maintain the integrity of the system's infrastructure

Produce significant cost savings or revenue gains for MWRA

Monitor system needs and plan appropriate longer-term responses

Provide acceptable working conditions at field sites and at maintenance support facilities

Implement the regional I/I plan

#### Priority Five Desirable Projects

Risk/Consequence both low

Projects which are desirable because they would:

Yield worthwhile cost savings, revenue gains, or efficiency improvements for MWRA

Protect the long term value and usefulness of system assets

Solve future problems and conditions which are expected to arise in the latter half of the planning period

Be beneficial towards the improved operation of a local system

#### **Master Plan Priority Ratings - Water**

<u>Priority One</u> <u>Critical/Emergency</u> Risk moderate to high/Consequence very high

Projects which:

Resolve emergencies or critical threats to public health or worker health and safety

Prevent imminent failure of the system and significant loss of service

#### <u>Priority Two</u> <u>Essential Projects</u>

Risk variable/Consequences high

Projects which are essential to:

Critical facility assessment

Fix existing reliability problems related to "single points of failure"

Upgrade or maintain emergency back-up facilities in operational condition

Address facilities in poor condition where the ability to provide uninterrupted service, sanitary protections or adequate flow is compromised.

Meet <u>minimum</u> hydraulic performance requirements and service needs including adequate distribution storage in areas with a critical shortfall of storage

To comply with mandated legal, regulatory or statutory requirements

#### <u>Priority Three</u> <u>Necessary Projects</u> Risk moderate to high/Consequences moderate to low

Projects which are necessary to:

Improve public health and worker safety

Restore the system's infrastructure where it is seriously deteriorated

Significantly improve the effectiveness, efficiency, or reliability of system operations and service delivery including where appropriate, the ability to monitor the system

Preserve water quality during distribution

Maintain consumer confidence

To comply with other legal, regulatory or statutory requirements

Projects which are important to:

Maintain the integrity of the system's infrastructure

Improve hydraulic performance or add distribution storage

Produce significant cost savings or revenue gains for MWRA

Monitor system needs and plan appropriate longer-term responses

Provide acceptable working conditions at field sites and at maintenance support facilities

Maintain efforts to manage system demands

Provide broader environmental benefits

#### <u>Priority Five</u> <u>Desirable Projects</u>

Risk/Consequence both low

Projects which are desirable because they would:

Yield worthwhile cost savings, revenue gains, or efficiency improvements for MWRA

Protect the long term value and usefulness of system assets

Solve future problems and conditions which are expected to arise in the latter half of the planning period

Be beneficial towards the improved operation of a local system

### **APPENDIX 6**

**Project Status Overview** 

### Appendix 6 Project Status Overview

The following information presented below provides an approximation of status for design and construction phases in the current capital budget. Planned end dates are provided for ongoing phases. Planned start dates are provided for future phases. These dates are anticipated Notice-to-Proceed dates after the bid period. All dates are subject to change.

	Subphase/Project	Total Contract Amount	Projected Pmts. Thr. FY17	Status Based on % of Budget Expended	Complete	Planned Start	Planned End

## **APPENDIX 9**

**MWRA Completed Projects** 

## MWRA Completed Projects (as of December 31, 2017)

Project	Total Cost (\$000)	<b>Completion Date</b>	Summary
Wastewater	\$5,272,393		
Waterworks	\$1,786,302		
Business and	\$67,174		
Operations Support			
MWRA Total	\$7,125,869		

**Bolded** items represent projects added since the last document.

*Italicized* items represent a change in value to a closed project due to a determination that past retainage values no longer represent a liability to the Authority.

Wastewater System Impi	rovements		
Boston Harbor Project	\$3,512,332	Nov-01	BHP constructed to minimize the pollution of Boston Harbor. The new Deer Island Primary and Secondary Treatment Facilities are the largest components of the Project to comply with the requirements of the federal Clean Water Act and to improve the harbor for
S.101 Wastewater Metering System Upgrade	\$7,516	Dec-93	Construction of system to provide accurate flow data.
S.102 Quincy Pump Facilities	\$25,907	Sep-03	Constructed 3 new pump station and rehabbed force mains to ensure continuous pumping to treatment facilities.
S.103 Hingham Pump Station	\$3,027	Apr-92	Elimination of untreated sewage discharges.
S.104 Braintree- Weymouth Relief Facilities	\$227,705	Jun-10	Project reduces overflows into Weymouth Fore River during wet weather events.
S.105 New Neponset Valley Relief Sewer	\$30,300	Jul-96	Relief facilities to correct structural and hydraulic deficiencies in the New Neponset Valley Interceptor Sewer System.
S.106 Wellesley Extension Replacement Sewer	\$64,359	Jan-96	Construction of a replacement sewer and rehabilitation of sections of existing sewer lines to alleviate capacity restraints, improve the water quality of the Charles River, protect aquifers, and reduce backups in Needham and Dedham.
S.107 Framingham Extension Relief Sewer	\$47,856	Sep-04	Installation of a new force main and gravity sewer and construction of a new pump station.
S.108 Alewife Brook Pkwy Pump St Rehab	\$1,465	May-95	Replacement of equipment, construction of building addition and wet well modifications.
S.110 East Boston Pump Facilities	\$48,234	Jan-93	Constructed to eliminate sewage back-ups.
S.112 Charlestown Pump Station Replacement	\$32,533	Apr-93	New 93 mgd pump station to increase pumping efficiency and eliminate overflows to the Mystic River.
S.115 Reading Pump Station Replacement and Extension Relief Sewer	\$412	Sep-87	Elimination of surcharges, reduction in staff requirements, and correction of safety hazards.

S.118 Bell Isle Siphon	\$79	Apr-89	Reduction of salt water infiltration and increase in
Rehabilitation	¢8.000	11.00	system capacity.
S.127 Cummingsville	\$8,999	Jul-08	Replacement and rehabilitation of existing sewers to
Replacement Sewer			provide additional capacity for upstream communities.
			communicies.
S.129 North	\$11,997	Mar-99	Rehabilitation of a 19,700 linear-foot 100-year old
Metropolitan Trunk			sewer line.
Sewer			
S.131 Upper Neponset	\$54,175	Mar-08	Project anticipated to eliminate interceptor backups
Valley Sewer System			during wet weather events.
S.136 West Roxbury	\$10,314	Jun-11	Investigate and rehabilitate West Roxbury Tunnel
Tunnel			Sewer.
S.138 Sewerage	\$281	Apr-04	Updated and new GIS maps of sewer system.
System Mapping			
S.143 Regional I/I	\$169	Jun-03	Reduction in infiltration and inflow water entering the
Management Planning			MWRA system.
S.178 Deer Island	\$32,952	Feb-91	Constructed to prevent sewage surcharges and
Pump and Power			overflows in the upstream sewer system by improving
Station Upgrade			flows to Deer Island Tunnel System and Plant.
S.179 Deer Island	\$26,081	Jul-99	Facility rehabilitation restored headworks capacity.
Remote Headworks	7-3,33-		,
Improvements			
	d4 604		D
S.180 D.I.	\$1,684	Jul-89	Restoration of operating efficiency by replacing 80
Sedimentation Tank			inlet sluice gates and baffles, rehabilitation of control
System Improvements			building and other improvements.
S.181 D.I.	\$9,474	Jun-92	Upgrade of the old Deer Island treatment plant.
Intermediate Upgrade			
S.184 Nut Island	\$1,206	Dec-86	Upgrade or replacement of equipment, including
Immediate Upgrade			switch gear, sludge cross collectors and replacement
			of electric distribution substation to accommodate
			increased flows to Deer Island Treatment Plant.
S.185 Clinton	\$36,747	Sep-92	Upgrade existing plant to improve water quality and
Wastewater Treatment	750,747	3cp 32	met standards by rehabbing and new equipment.
Plant			mee standards by rendsbing and new equipment.
S.187 Deer Island	\$114	Sep-88	Ensuring efficient operation of Deer Island treatment
Sludge Thickeners	7117	20p 00	plant digesters.
Rebuilding			Prairie di Besteroi
S.189 DI Dual Fuel	\$281	Jan-06	Overhaul of five diesel engines.
Engine	7-0-		2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2
S.190 Deer Island	\$28	Mar-88	Restoration of system operating efficiency.
Electrical Equipment	7-0		
Upgrade			
S.191 DI Chlorination	\$4	Mar-89	Provision of effective disinfection operation and safe
Facility Rehab	'		working environment.
	<u> </u>		. 5

C 104 Next Jalana	Ć1 F07	Dan 02	language and the constant of the
S.194 Nut Island	\$1,507	Dec-92	Improvements to ensure effective operation of the
Intermediate Upgrade			Nut Island treatment plant.
S.196 Other	\$92	Apr-90	Removal of hazardous materials from wastewater
Wastewater		•	facilities and creation of on-going safety management
			programs.
S.197 Deer Island	\$1,300	Sep-97	Repair of effluent discharge Outfall 002.
Treatment Plant			
Outfall Repair			
S.198 Boston Harbor	\$1,275	Dec-02	Certification required for continuous federal grant and
Performance			loan programs during construction.
Certification			
S.200 DI Plant	\$33,427	Sep-08	Capital investment to optimize the operation of the
Optimization			Deer Island Treatment Plant. Remaining initiatives rolled into DI Plant Asset Protection.
S.211 Laboratory	\$2,212	Feb-12	Upgrade and restore the Central Laboratory
Services			
S.261 Residuals	\$172,056	Dec-01	Phase 1 Feb - 92 - construction of the Residuals
			Treatment Facility at ore River Staging Area (FRSA).
			Termination of the sludge discharge to Boston Harbor.
			Phase 2 Dec-01 - To expand the residuals processing
			plate at the FRSA in Quincy to provide the capacity to
			process the sludge quantities produced by Deer
			Island.
S.325 Fox Point CSO	\$152	Apr-89	Elimination of untreated sewage discharges.
Facility	^¬ 44¬	F 1 04	
S.326 Commercial	\$7,117	Feb-91	Improvements to water quality by reducing wet
Point CSO Facility			weather overflows via construction of a screening and disinfection facility.
S.327 Southwest	-\$6	Fall 86	Elimination of combined sewer overflows.
Corridor CSO			
S.330 St. Mary's Street	\$17	Feb-87	Identification of solution for storm water detention.
CSO Modifications			
S.332 Somerville	\$98	Feb-89	Elimination of inadequately treated sewage
Marginal CSO			discharges.
Rehabilitation			
S.335 Moon Island	\$1		
S.338 Cottage Farm	\$133	Sep-94	Rehabilitation of HVAC duct work.
CSO Ventilation System			
Repairs			
S.339 North	\$221,510	May-11	Eliminate CSO discharges and provide a high level of
Dorchester Bay	4=		storm water control.
S.340 South	\$55,454	Nov-06	Eliminate CSO discharges to South Dorchester Bay
Dorchester Bay Sewer			
Separation (Fox Pt.)			
341 Dorch Bay Sew	\$59,437	Dec-16	Eliminate CSO discharges to South Dorchester Bay
Separ (Commercial			
Point)			

S.342 Neponset River	\$2,492	Aug-02	Elimination of CSO discharges to the Neponset River.
Sewer Separation			
S.343 Constitution	\$3,731	Apr-02	Elimination of CSO discharges at the Constitution
Beach Sewer			Beach CSO Facility.
Separation			
S.344 Stony Brook	\$44,319	Sep-06	Minimize CSO discharges to the Stony Brook conduit
Sewer Separation			and the Back Bay Fens.
346 Cambridge Sewer	\$103,298	Jun-17	Minimize CSO discharges to the Alewife Brook and
Separation	. ,		upgrading connections to MWRA interceptors.
S.347 East Boston	\$85,638	Jul-10	To increase hydraulic capacity and provide long-term
Branch Sewer Relief	. ,		structural integrity to MWRA's East Boston Branch
			Sewer.
S.348 BOS019 Storage	\$14,288	Mar-07	To reduce CSO activations and annual volume to the
Conduit	714,200	IVIAI-07	Little Mystic Channel.
S.349 Chelsea Trunk	\$29,779	Jun-02	To control CSO discharges at outfalls CHE002, CHE003,
	329,779	Juii-02	_
Sewer S.350 Union Park	Ć40 F03	l 07	CHE004, and CHE008.
	\$49,583	Jun-07	To reduce the frequency and impacts of CSO
Detention Treatment			discharges from outfall BOS070.
Facility	40.40		
S.351 BWSC Floatables	\$946	Mar-02	Limit the discharge of floatable materials from 5 BWSC
Controls			combined sewer outfalls.
S.352 Cambridge	\$1,127	Dec-08	Limit the discharge of floatable materials from
Floatables Controls			Cambridge CSO outfalls.
S.353 Upgrade Existing	\$22,385	Aug-01	Minimize CSO impacts to the Lower Charles River,
CSO Facilities			Upper Inner Harbor, Mystic/Chelsea Confluence, and
			South Dorchester Bay by upgrading 5 CSO treatment
			facilities.
S.354 Hydraulic Relief	\$2,295	Aug-00	Elimination of hydraulic restrictions between local and
Projects			MWRA Systems.
S.355 MWR003 Gates	\$4,424	Oct-15	Minimize discharges to Alewife Brook as part of the
& Siphon			MWRA's Alewife Brook CSO control plan.
S.356 Fort Point	\$11,507	Dec-10	To minimize CSO discharges to Fort Point Channel by
Channel Sewer			separating combined sewer systems tributary and
Separation			implementing system optimization measures.
S.357 Charles River	\$3,633	Oct-11	Implement wastewater system optimization
CSO Controls	. ,		measures, including structural and operational
			improvements.
S.358 Morrissey	\$32,181	Jun-09	Reroute storm water from BOS087 area
Boulevard Drain	<del>+32,131</del>	55 55	The state of the s
359 ReservedChannel	\$70,520	Dec-15	To minimize SCO discharges to the Reserved Channel
Sewer Separation	Ç, 0,320	500 15	by separating combined sewer systems in the area of
Server Separation			South Boston.
S.360 Brookline Sewer	\$24,715	Jul-13	Minimize discharges to Charles River by separating
Separation	,,		combined sewer systems in several areas.
			33
S.361 Bulfinch Triangle	\$9,032	Jul-10	Minimize discharges to Charles River by separating
_	25,032	Jui-10	
Sewer Separation			combined sewer systems in several areas.
S.402 Comprehensive	\$891	Nov-90	Correction of safety hazards at MWRA facilities and
Safety Action Project	7002		establishment ongoing safety management program.

System Improvements			

Waterworks System Impr	ovements		
S.533 Local Sources of Supply	\$2,112	Jul-95	Provision of assistance to communities to promote effective protection of existing local water supply sources and encourage development of additional local sources where feasible.
S.535 Reservoir Risk Assessment	\$647	Jun-92	Development of maps and data to determine at risk areas.
S.537 Drinking Water Quality Improvement Wachusett	\$8,330	Oct-95	To comply with Safe Drinking Water Act to strengthen quality standards for water supply from Wachusett.
S.538 Sudbury Reservoir Treatment Plant Study and EIR	\$447	Sep-92	Evaluation of alternative uses of the Sudbury Reservoir.
S.539 Drinking Water Quality Improvement Quabbin	\$307	Nov-98	To comply with Safe Drinking Water Act to strengthen quality standards for water supply from Quabbin.
S.541 Watershed Protection	\$8,500	Dec-03	To develop watershed protection measures for the MWRA/MDC reservoir system.
S.542 Carroll Water Treatment Plant	\$420,675	Jun-05	To provide high quality drinking water to MWRA communities and to ensure water meets the standards established by the federal Safe Drinking Water Act.
S.543 Quabbin Water Treatment Plant	\$19,973	Oct-14	To improve the quality of drinking water to the three Chicopee Valley Aqueduct communities.
S.544 Norumbega Covered Storage	\$106,674	Jun-08	Construction of a covered 115 million gallon reinforced concrete storage tank to meet the drinking water quality standards mandated by the federal Safe Drinking Water Act.
S.545 Blue Hills Covered Storage	\$40,083	Apr-10	To ensure sufficient distribution storage for MWRA's Southern High Service Area.
S.547 Fells Covered Storage	\$18,004	Jun-00	Covered storage for Northern High Service System.
S.548 Nash Hill Covered Storage	\$14,296	Jul-99	To improve the quality of drinking water to the three Chicopee Valley Aqueduct communities.
S. 550 Spot Pond Storage Facility	\$60,071	Dec-15	Storage facility required to meet state and federal drinking water guidelines and provides 1 day's water demand.
S.598 Wachusett Reservoir By-pass Tunnel	\$15	Jan-89	Evaluation of the option of constructing a tunnel bypass.
S.599 Dam Control Valve Replacement	\$1,763	Jul-98	Valve replacement at Sudbury Reservoir in Southborough and Wachusett Dam.
S.600 Oakdale Power Station Generator Repair	\$893	Sep-91	Repair of substation metering and transformer systems.

\$9,158	Jun-05	Installation of motorized gates and 12 facilities
		rehabilitated.
\$593	May-89	Production of approximately 3,700,000 kW hours per
		year of electricity.
\$5,025	May-93	Construction of new waterworks maintenance facility
		in Southborough.
\$697,254	Jun-03	To provide transmission redundancy for the Hultman
		Aqueduct ensuring reliable water delivery and
		providing sufficient hydraulic capacity to support the
		new Carroll Water Treatment Plant and covered
		storage distribution facilities.
ÇSEC	San 02	Repair and cleaning of bridge façade and construction
3330 0CC¢	3ep-92	of new surface topping.
\$10	Mar-89	Provision of a new water disinfection facility.
710	14101 05	Trovision of a new water distinction radiity.
\$2 539	lun-93	Replacement of obsolete facility with new 4,000 sq.
72,333	Juli 55	ft chlorination and ammonia feed facility.
		it chiormation and arimonia recurricy.
\$8,666	Anr-08	To provide redundancy for water service for the three
φο,σσσ	7.61.00	communities supplied by the Chicopee Valley
		Aqueduct (CVA) in case of a CVA failure or shutdown.
		riqueduce (evr), in case or a corrianal e or shacaoinn
\$9,287	Jul-10	Provide the necessary improvements to the
, , ,		Wachusett Reservoir Dam.
¢1 170	Mar-02	Development of data base and recommendations for
<i>γ</i> 1,170	iviai-33	master plan.
		master pian.
\$12 <b>4</b> 82	Jun-90	Rehab of 139 revenue meters
712,702	3411 30	The field of 155 revenue meters
\$23,691	Sen-03	Improve the condition and operability of the pipelines
723,031	20p 00	serving the Boston Low Service System.
		25.7
\$2.153	Mar-97	Rehabilitation and/or replacement of deteriorated
72,133	11.01 57	pipeline.
		P-15
\$3	Sep-90	Construction of a booster pump station to increase
		pressure throughout the Orient Height distribution
		system.

S.681 Southern Service Improvements	\$14,450	Oct-99	Reliability and capability improvements to pipelines and pump stations serving the Southern service area.
Improvements			and pump stations serving the southern service area.
S.683 Heath Hill Road	\$19,358	Oct-07	Repair and improve pipelines and valves in Southern
Pipe Replacement			High and Southern Extra High Service areas.
S.684 Commonwealth	\$8,503	Dec-99	Modernize and improve station serving a major
Ave Pump Station	4		portion of Newton.
S.685 Ward Street	\$24	Aug-89	Evaluation of the feasibility of pump station
Pump Station			rehabilitation.
S.686 Dudley Road	\$55	Jun-91	Evaluation of the feasibility of pump station
Pump Station			rehabilitation.
S.687 Lexington St	\$3,985	Jun-99	Installation of larger capacity pumping units, backup
Pump Station			power generation, and various electrical upgrades.
Rehabilitation			
S.688 Northern	\$973	Nov-88	Increase in pipe capacity and pressure.
Intermediate High			
Pipelines			
S.689 James L. Gillis	\$33,138	May-02	To improve and modernize pumping facilities.
Pump Station Rehab			
S.690 Northern Low	\$714	Aug-99	Repair of Section 16W with replacement and pipe slip
Service Pipeline			lining methods.
Replacement			
S.691 Northern High	\$17,271	Jun-99	Installation of a new primary supply line for the
Service Improvements -			northeast section of the Northern High Service
Lynn Pipeline			System.
S.701 Northern Extra	\$71	Jan-92	Development of a plan to supply water to Bedford.
High Service – Bedford			
Pipeline			
S.706 Northern High	\$2,360	Jun-02	To integrate the new Section 91 pipeline with the
Service - Construction			existing grid network, improving service pressures and
Mains from Section 91			reliability to community meters.
713 Spot Pond Supply	\$65,489	Dec-16	To improve the condition of carrying capacity and
Mains Rehabilitation			valve operability on the two long supply mains from
			Chestnut Hill to Spot Pond.

		Appe	iluix 9
S.714 Southern Extra	\$3,657	Dec-00	To increase hydraulic capacity of the mains that carry
High Sections 41 & 42			water to the Bellevue Tanks.
S.715 Newton Service	\$5,762	Nov-99	New supply to Newton's Oak Hill Tank replacing an
Improvements			antiquated pump station and providing some system
			redundancy in the area.
S.716 Water Main	\$10,648	Nov-00	Relocation of the Section 8 water main over the
Relocation in Chelsea			Chelsea River.
River			
S.720 Warren Cottage	\$1,205	Dec-02	To improve the carrying capacity and internal
Line Rehabilitation			condition of the Warren Cottage Line.
S.725 Hydraulic Model	\$598	Jun-07	To modernize MWRA hydraulic and water quality
Update			modeling capabilities.
730 Weston Aqueduct	\$80,492	Dec-16	To improve the condition of carrying capacity of these
Supply Mains			major supply lines and the quality of the water
			supplied to the low, High, Intermediate, and Extra
6.704   6.11	ÅF 626	5 42	High pressure zones.

## **APPENDIX 10**

# Expected Useful Life of Capital Projects

### APPENDIX 10

### EXPECTED USEFUL LIFE OF CAPITAL PROJECTS

The estimated useful life of the MWRA's capital projects are summarized below:

Type of Capital Improvement	Estimated Useful Life (in years)
Buildings (includes all substantial above ground structures or enclosures)	40
Mechanical Equipment (includes pumps, chains, fans, HVAC, valves, etc.)	20
Electrical Equipment (motors, generators, motor control centers, lighting, conduit, etc)	20
Control Systems (computers, SCADA, PLCs, programming, etc)	10
Water Pipes	50 – 75
Water Pipe appurtenances (blow offs, air valves)	40
Sewer Pipes – gravity	50
Sewer Pipes – pressure	50
Sewer Pipe appurtenances (manholes, chambers)	50
Tunnels – Water	100
Tunnels – Wastewater	100
Tunnel appurtenances (shafts, control valves)	40
Distribution Reservoirs – above ground	40
Distribution Reservoirs – below ground	75 -100
Dams and Dam improvements	100
Motor Vehicles	10 – 15
Furniture and Fixtures	5 – 15
Leasehold Improvements	Period of lease
Study	5
Design – if constructed	20
Design – if not used	5
Inflow/Infiltration - Repair	20
Inflow/Infiltration - Replacement	50
Covered Storage	50
