METROPOLITAN WATER TUNNEL PROGRAM

NOTICE TO ABUTTERS

Boston

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major Water Supply Tunnel Program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging existing water tunnel system to be rehabilitated without interrupting service.

As part of the design effort, the MWRA has hired CDM Smith and other firms to perform test borings to drill and collect samples of soil and rock, conduct logging and permeability testing in each boring, and install piezometers within the boreholes to measure groundwater levels. The site activities will include installation of temporary fencing around the work area to provide working space for a drill rig and support trucks, equipment, material storage, etc.

At this location, the work is estimated to take about 10 weeks, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

MWRA has planned for test boring and vacuum exploration activities at the City of Boston Department of Public Works Lot near 415 American Legion Highway. All work will be outside of roadways and away from private properties.

Work is scheduled to begin the week of August 23, weather dependent, and occur typically between 7:00 a.m. and 5:00 p.m., Monday through Friday. Construction Zone Safety Plans will be provided for traffic control, and ensuring worker and general public safety in each area.

If you have any concerns or questions, please contact:
